Key findings

- Automated classification: Not Scam.
- No flags from the reputation services TrustSniffer consulted at assessment time.
- The operator behind the site could not be independently connected to a real-world brand or person.

Full analysis

Overview

ecomdata.de is the corporate website presented by ecomDATA GmbH, an apparent Austrian business-services provider offering managed hosting, cloud infrastructure, domain services, and related IT security products to business customers through subscription and support arrangements.

Scam/Impersonation Risk

No contradictions were observed. The site presents a coherent corporate identity and service model, while external reputation checks found no malicious or suspicious detections, no phishing or impersonation indicators, and no reported abuse activity associated with the observed hosting infrastructure. Behavioral testing identified limited external requests outside the expected allowlist, but no hidden forms, credential-exfiltration paths, wallet activity, cloaking, clipboard manipulation, or other abuse mechanisms; this is consistent with a low-risk corporate website rather than an impersonation or scam operation.

EVIDENCE

- The homepage identifies the business as “ecomDATA GmbH” and uses a corporate/product-landing presentation with substantial service content.
- The contact and legal/imprint areas provide business-facing contact and legal information.
- External threat checks recorded zero malicious and zero suspicious detections, with no phishing, impersonation, or abuse findings.

Regulatory Verification Notes

The website appears to provide ordinary hosting, cloud, domain-registration, and managed-server services rather than presenting itself as a financial or otherwise regulated provider. Its pages include product descriptions, pricing, customer testimonials, contact information, privacy and cookie disclosures, and legal/imprint content. The available evidence does not independently verify the real-world operator behind the on-site identity, and no regulatory licence or registration number is presented as part of the stated service model; this is a verification point rather than evidence of deceptive conduct. The apparent corporate identity and clean external reputation are nevertheless consistent with an established, apparently legitimate website.

EVIDENCE

- The service pages describe JTL-Shop and JTL-WAWI hosting, WordPress and Joomla hosting, managed servers, domains, pricing, and security products.
- The legal/imprint and privacy pages provide formal business and data-protection disclosures.
- The site is served from AS211582, ecomDATA-AS - ecomDATA GmbH, AT; the observed country is AT.
- The site uses a valid DV TLS certificate issued by YR2, valid to 2026-10-06T14:50:57+00:00.

What to Verify Next

Before credential or payment interactions, an enterprise or consumer counterparty should independently confirm the company identity and the contracting entity through an authoritative business registry or an offline contact route. The applicable service terms, cancellation or return provisions, support obligations, and payment-protection arrangements should be reviewed against the intended purchase. Where a particular service could fall within a regulated category, the relevant supervisory register should be checked for that specific activity.

EVIDENCE

- The website contains dedicated product, pricing, contact, privacy, and legal/imprint content suitable for independent cross-checking.
- The stated business model is recurring subscription and support services for managed hosting, cloud, domains, and related IT products.
- The site's transport encryption and service presentation support ordinary commercial verification, while independent operator confirmation remains appropriate before sensitive transactions.

Summary Verdict

The available evidence supports a **high-trust, low-risk posture** and is consistent with an established, apparently legitimate corporate website. The site does not present observable scam, phishing, impersonation, or other contradictory signals, although the real-world operator identity remains independently unverified.

Infrastructure Integrity

The website benefits from CDN/WAF protection, which provides a mitigating layer against routine exposure and abuse. Observed infrastructure includes a CDN edge at 217.160.0.140 on AS8560, alongside infrastructure associated with ecomDATA-AS; the protective layer should be treated as a security control, not as proof of legitimacy.

Closing Assessment

Normal browsing and ordinary service evaluation are proportionate, but credentials or payments should follow independent confirmation of the contracting entity, applicable terms, and available payment protections.

Written analysis generated 2026-08-11 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	50%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of ecomdata.de.

- The request stayed on ecomdata.de. It was not redirected to another domain. CLEAR
- DNS for this domain is served by 227.47 2a10:b040:1:0:0:0:0:10, across 3 name servers. NOTED
- It is hosted on ecomDATA-AS, from a server in AT. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about ecomdata.de at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that

evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
