

Is ejggpb.com legit? TrustSniffer's high-trust assessment: 100/100

ejggpb.com

Verdict

100

OUT OF 100

HIGH TRUST

ejggpb.com appears legitimate.

Our checks found nothing pointing to fraud. Ordinary care still applies when you pay or sign in.

Not Scam

Safe for Login

Low Risk

Assessed 2026-08-20 by automated analysis. Classification confidence 50%.

What this site appears to be

Open-access academic journal site for genetics, genomics and plant breeding with editorial information, indexing details, submission links and journal metrics.

Evidence status and limitations

- Evidence completeness: UNKNOWN
- The real-world operator identity was not independently verified.
 - Module-level completeness metadata is unavailable for this legacy report.

What ejggpb.com served when TrustSniffer captured it on 2026-08-20. The page may look different now.

Key findings

- Automated classification: Not Scam.
- Domain age: 3 to 10 years (registration continuity).
- Public web-archive history exists since 2018.
- No flags from the reputation services TrustSniffer consulted at assessment time.

Full analysis

Overview

This website is an open-access academic journal for genetics, genomics, and plant breeding, presenting peer-reviewed research, editorial information, submission guidance, archives, indexing references, and journal-performance statistics for prospective authors and readers.

Scam/Impersonation Risk

No contradictions were observed. The homepage presents a coherent academic-journal purpose, with editorial, archive, submission, and contact pathways rather than financial, credential-harvesting, or cryptocurrency functions. The sampled site contained no phishing indicators, brand-impersonation indicators, malicious content findings, or suspicious forms; its academic claims and publication workflow therefore read as consistent with an apparently legitimate informational website. The real-world operator remains independently unverified, so the site's stated institutional or editorial identity should not be treated as independently proven.

EVIDENCE

- The homepage identifies the Journal of Genetics, Genomics and Plant Breeding and describes double-blind peer review in genetics, genomics, and plant breeding.
- The registration record shows creation on 2017-01-30 and an age of 9.56 years.
- Historical records show 65 archive snapshots spanning 2018–2026, with 9 years tracked.
- The homepage contains no login form, sensitive submission form, wallet connection, or hidden form; observed external activity was 0.

Regulatory Verification Notes

The site's relevant governance material is editorial rather than financial or professionally regulated. The editorial and about content provides journal scope, an editorial-board claim, an ISSN, a DOI prefix, indexing references, and publication statistics, but the sampled material does not independently establish the legal entity operating the journal or clearly explain whether publication fees are supported by authors, institutions, or another arrangement. This is a transparency and verification matter, not evidence of deception. A separate broker-reputation comparison produced no match; that result is contextual only and is not a licensing or regulatory determination.

EVIDENCE

- The homepage states ISSN (Online) 2581-3293, DOI prefix 10.63551, a 2026 NAAS score of 3.67, and journal statistics covering articles, citations, downloads, and publication timing.
- The editorial and about pages describe the journal's scope and peer-review process but do not provide an independently verifiable operating-entity identification in the sampled content.
- The site's transport encryption uses a DV certificate issued by YR2, valid to 2026-10-10T20:22:00+00:00.
- The domain registration record identifies GoDaddy.com, LLC as registrar and runs through 2027-01-30T13:39:15Z.

What to Verify Next

Before submitting manuscripts or paying any publication-related charge, the prospective author should independently confirm the journal's editorial-board affiliations, indexing claims, ISSN and DOI-prefix information, and any applicable article-processing charges through the relevant academic registries or institutional sources. The official contact channels should also be confirmed through an independently obtained source, and payment arrangements should provide ordinary documentation, receipts, and suitable payment protection.

EVIDENCE

- The instructions-for-authors page provides the operative submission and publication workflow to compare against independent journal records.
- The editorial-board and about pages provide the names and affiliations that can be checked through university or research-institution sources.
- The contact page and publication instructions are the appropriate site locations for confirming submission conditions, fees, and official communication routes.

Summary Verdict

Available evidence is consistent with an established, apparently legitimate academic website and supports a high-trust, low-risk posture for its informational purpose. No scam, phishing, impersonation, or other contradictory signal was identified, although independent operator identity verification is incomplete.

Infrastructure Integrity

The site resolves directly to a single likely origin address rather than a detected CDN edge, and is hosted by WHG-SGP—WHG Hosting Services Ltd, GB. This is a conventional, resolved hosting arrangement and provides no standalone indication of abuse; hosting infrastructure remains a mitigating technical signal rather than proof of institutional legitimacy.

EVIDENCE

- Served from AS204800, WHG-SGP—WHG Hosting Services Ltd, GB.
- The resolved infrastructure reports one unique IP, 85.187.128.9, with no CDN detected and one likely origin IP.
- The hosting registry is RIPE NCC and the resolved network country is US.

Closing Assessment

Normal informational browsing is proportionate to the assessment; manuscript submissions or payments should proceed after the ordinary independent identity, publication-policy, and payment-protection checks described above.

Written analysis generated 2026-08-20 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	25%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of ejggpb.com.

- The request stayed on ejggpb.com. It was not redirected to another domain. CLEAR
- Registration is published under GoDaddy.com, LLC. CLEAR
- DNS for this domain is served by a2hosting.com, across 4 name servers. NOTED
- The registration is paid up to 2027-01-30. NOTED

- The earliest public archive of this site is from 2018-04-13. CLEAR
- It is hosted on WHG-SGP, from a server in US. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about ejggpb.com at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
