

Is electron-test.ru legit? TrustSniffer's high-trust assessment: 100/100

electron-test.ru

Verdict

100

OUT OF 100

HIGH TRUST

electron-test.ru appears legitimate.

Our checks found nothing pointing to fraud. Ordinary care still applies when you pay or sign in.

Not Scam

Safe for Login

Low Risk

Assessed 2026-08-20 by automated analysis. Classification confidence 50%.

What this site appears to be

Website for Electrontest laboratory offering accredited technical and clinical testing of medical devices, accreditation details, services, contact information and a contact form to submit requests.

Evidence status and limitations

Evidence completeness:

UNKNOWN

- The real-world operator identity was not independently verified.
- Module-level completeness metadata is unavailable for this legacy report.

Key findings

- Automated classification: Not Scam.
- Domain age: more than 10 years (registration continuity).
- Public web-archive history exists since 2016.
- No flags from the reputation services TrustSniffer consulted at assessment time.

Full analysis

Overview

The website is the corporate presence of Electrontest, a medical-device testing laboratory that presents technical and clinical laboratory services, accreditation information, testing capabilities, registration assistance, contact details, and a request form for prospective clients. Its apparent business model is fee-based testing, certification, and related documentation support for medical-device manufacturers and organizations.

Scam/Impersonation Risk

No contradictions were observed. The site presents a coherent corporate laboratory profile, identifies "ООО «ЭлектронТест»" and related laboratory operations, and provides substantive descriptions of medical-device testing rather than using financial solicitation, cryptocurrency, investment, or deceptive promotional mechanics. The published structure includes an about section, testing-service pages, complaints information, press references, contacts, and a request form; no login, password, wallet, or hidden sensitive form was detected. Automated interaction telemetry did identify substantial external requests and post-interaction page changes, but this was not accompanied by cloaking, credential collection, wallet-drainer behavior, clipboard manipulation, or a malicious reputation finding, so it is treated as operational telemetry rather than evidence of impersonation or fraud.

EVIDENCE

- The homepage identifies Electrontest as a technical and clinical testing laboratory and describes its relationship to the Electrontest group.
- The site navigation exposes “About,” testing, complaints, press, and contact sections; the captured page contains one contact form with no sensitive fields.
- The domain was registered on 2016-04-14 and is approximately 10.36 years old.
- Archive records contain 140 snapshots spanning 2016-12-17 through 2026-03-12, covering 11 years.

Regulatory Verification Notes

Available evidence is consistent with an established, apparently legitimate business website, but the real-world operator identity is not independently verified. The site states that its laboratories provide accredited testing and displays accreditation-related information; however, the supplied evidence does not establish an independently verified license, registration number, or regulator confirmation. This is a verification and disclosure matter, not evidence of a scam. The contextual broker-reputation check produced no match, and external indicators contained no confirmed blacklist or malicious finding. The domain is administered through REGRU-RU, while its transport security uses a known DV certificate.

EVIDENCE

- The about and testing pages describe technical-safety, clinical-diagnostic, electromagnetic-compatibility, and medical-device testing services, including support related to Russian and EAEU registration.
- The site's hosting infrastructure is AS57724, DDOS-GUARD - DDOS-GUARD LTD, RU.
- The site's TLS certificate is issued by YR1, uses domain validation (DV), and is valid until 2026-09-19T12:44:50+00:00.
- The contact and privacy pages are present, while the supplied page evidence does not show a license number or independently verified regulatory registration.

What to Verify Next

Before a formal engagement, the prospective client should confirm the laboratory's current accreditation and any applicable registration directly with the relevant Russian or EAEU registry, using the legal entity and accreditation details stated on the site. The contracting entity, scope of work, deliverables, liability provisions, refund or dispute terms, and payment protections should be checked against the quotation or contract. Contact details should also be confirmed through an independently sourced corporate record or an offline business channel before credentials or payment information are exchanged.

EVIDENCE

- The site provides accreditation-related content on its laboratory and service pages for comparison with official registry records.
- The contact page provides direct contact information and a request mechanism for confirming the contracting entity and service scope.
- The site's privacy page supplies a further corporate-documentation reference point for comparing stated data-controller details with engagement paperwork.

Summary Verdict

Available evidence supports a **high-trust, low-risk posture** and is consistent with an established, apparently legitimate corporate laboratory website. No phishing, impersonation, blacklist, or identity-inconsistency signal was observed, although the operator’s real-world identity remains independently unverified.

Infrastructure Integrity

The site resolves directly to a single origin address, with no CDN or WAF edge infrastructure detected. This provides less intermediary protection than a mainstream CDN deployment, but it is an infrastructure characteristic rather than evidence of malicious activity.

EVIDENCE

- The site resolves to one IP address, 176.57.65.249, with zero detected edge IPs.
- No CDN or WAF vendor was identified in the observed infrastructure.
- The resolved server is located in RU according to the collected hosting data.

Closing Assessment

Normal browsing and ordinary business engagement are proportionate to the available evidence, subject to the standard independent checks of the contracting party, service terms, refund arrangements, and payment protections before credential or payment interactions.

Written analysis generated 2026-08-20 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	50%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of electron-test.ru.

- The request stayed on electron-test.ru. It was not redirected to another domain. CLEAR
- Registration is published under REGRU-RU. CLEAR
- DNS for this domain is served by ru., across 2 name servers. NOTED
- The registration is paid up to 2027-04-14. NOTED
- The earliest public archive of this site is from 2016-12-17. CLEAR
- It is hosted on DDOS-GUARD, from a server in RU. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about electron-test.ru at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
