Key findings

- Automated classification: Not Scam.
- Domain age: more than 10 years (registration continuity).
- Public web-archive history exists since 2004.
- No flags from the reputation services TrustSniffer consulted at assessment time.

Full analysis

Overview

This website is a personal archival photo and video gallery documenting Robb and Elissa Alvey's November 22, 2003 wedding at Walt Disney World, related Orlando and vacation activities, and downloadable wedding media; it appears to exist for sharing personal memories rather than for commercial transactions.

Scam/Impersonation Risk

No phishing, impersonation, blacklist, or conflicting-identity indicators were observed. The homepage presents a coherent personal archive with named wedding participants, dated event details, album descriptions, and downloadable video rather than a commercial or credential-harvesting proposition. Behavioral testing recorded unusual external POST activity and page mutations, but there were no login forms, hidden sensitive forms, wallet connections, clipboard activity, cloaking, or other abuse patterns; in the context of the site's static photo-gallery purpose, these observations do not establish a scam or impersonation concern. The real-world operator remains independently unverified, so the apparent identity should not be treated as proven.

EVIDENCE

- The homepage identifies “Robb & Elissa’s Wedding,” dated November 22, 2003, and describes wedding, resort, theme-park, cruise, and vacation photographs.
- The homepage provides a wedding-video download described as a 20meg ZIP file intended for Windows Media Player, with no payment or credential form.
- Domain registration continuity: registered 2003-07-20 (~23.1 years old).
- Web-archive coverage: 107 snapshots spanning 2004-03-24 to 2026-06-06 (23 years tracked).

Regulatory Verification Notes

The site presents itself as a personal, non-commercial event archive and does not offer financial, investment, brokerage, or other apparently regulated services. Consequently, no licensing claim or registration number is presented as part of the site's apparent operating model. The registration record identifies Network Solutions, LLC as registrar, while the personal names shown on the homepage have not been independently connected to a verified legal entity. Available external checks show no blacklist or malicious-site finding, no reported abuse associated with the hosting record, and no matching broker-reputation profile; coverage is not universal, so these are supporting signals rather than legal or regulatory conclusions.

EVIDENCE

- The homepage title is “Robb & Elissa’s Wedding - Nov 22nd, 2003,” and the page category is personal/event photo gallery.
- Domain registrar: Network Solutions, LLC; expiration date: 2031-07-20T05:49:09Z.
- The site's hosting infrastructure resolves to AS46562 (PERFORMIVE - Performive LLC, US).
- TLS certificate: issuer YR1, validation level DV, valid to 2026-10-19T05:00:38+00:00.

What to Verify Next

If activity extends beyond ordinary viewing or downloading, independently confirm that the person or organization being contacted is the intended operator, use an independently obtained contact route where available, and apply normal payment-protection and return-policy checks before any payment or credential exchange. Downloaded media should be handled through standard endpoint security controls before opening.

EVIDENCE

- The homepage contains no login form, sensitive-data form, wallet-connection function, or payment workflow.
- The page is informational and provides photo albums and downloadable media rather than an advertised service or transaction.
- The site has no stated license claim, license authority, or license number in the supplied content.

Summary Verdict

Available evidence is consistent with an established, apparently legitimate personal website with a high-trust, low-risk posture and no observed scam or impersonation contradictions. The conclusion is strong for the site's observed informational purpose, while the independent identity of the operator remains unverified.

Infrastructure Integrity

The site is hosted directly by Performive LLC in the United States on AS46562, with no CDN or WAF identified and one likely origin address. Its transport encryption uses a valid DV certificate issued by YR1; the hosting arrangement is a mitigating technical signal, not independent proof of operator identity.

Closing Assessment

Ordinary browsing and media access are proportionate to the observed risk posture; any future credential or payment interaction should remain conditional on independent identity, merchant, and payment-protection checks.

Written analysis generated 2026-08-21 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	25%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of elissaalvey.com.

- The request stayed on elissaalvey.com. It was not redirected to another domain. CLEAR
- Registration is published under Network Solutions, LLC. CLEAR
- DNS for this domain is served by themeparkreview.com, across 2 name servers. NOTED
- The registration is paid up to 2031-07-20. CLEAR
- The earliest public archive of this site is from 2004-03-24. CLEAR
- It is hosted on PERFORMIVE, from a server in US. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about elissaalvey.com at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
