

Is en.wav.tv legit? TrustSniffer's high-trust assessment: 90/100

en.wav.tv

Verdict

90

OUT OF 100

HIGH TRUST

en.wav.tv appears legitimate.

Our checks found nothing pointing to fraud. Ordinary care still applies when you pay or sign in.

Not Scam

Safe for Login

Low Risk

Assessed 2026-08-03 by automated analysis. Classification confidence 75%.

What this site appears to be

A multilingual adult-video aggregation and search page branded as World Adult Videos/wav.tv, listing a large catalog of Japanese and international pornography with filters for performers, tags, source sites, duration, age, popularity, and release date. It states that it searches videos across external platforms including XVideos, Pornhub, and xHamster.

Key findings

- Automated classification: Not Scam.
- Domain age: more than 10 years (registration continuity).
- Public web-archive history exists since 2014.
- No flags from the reputation services TrustSniffer consulted at assessment time.

Full analysis

Overview

The website is an established multilingual adult-entertainment search and aggregation service that presents a large catalog of Japanese and international videos, performer and tag indexes, DVD listings, favourites, and detailed search filters; its apparent business model is traffic monetization through advertising, referrals, or links to third-party content platforms rather than direct financial transactions.

Scam/Impersonation Risk

No phishing, brand impersonation, conflicting legal identities, or other identity contradictions were observed. The homepage exposes a conventional content-search interface rather than a credential-harvesting, payment, investment, or cryptocurrency workflow. Its long registration history, extensive archival continuity, and clean external threat reputation collectively support the conclusion that it is the established service it purports to be.

- The homepage contains one search form, with no login form, sensitive-data form, password submission to an external destination, wallet connection, or payment solicitation.
- The domain was registered in 2013 and is approximately 13.44 years old.
- The web archive contains 1,055 snapshots spanning 2014–2026, representing 13 years of tracked history with no established suspicious repurposing.
- External reputation checks recorded 0 malicious and 0 suspicious detections, no phishing finding, and no reported IP abuse.

Regulatory Verification Notes

The supplied homepage does not visibly identify a legal operating entity, postal address, licensing status, or contact channel. For an adult-content aggregator, this is principally a corporate-disclosure and content-governance limitation rather than evidence of fraud; no claim of financial or other regulated authorization was identified. Registration through ENOM, INC. uses a privacy-protected registrant record, which is an administrative detail and does not undermine the otherwise established provenance.

- The homepage describes the content service but does not display an operator name, corporate registration particulars, physical address, or regulatory authorization.
- The site is served from AS26666 by INTERSERVER-LAX / Interserver, Inc. in the United States.
- The site's transport encryption uses a DV certificate issued by GoGetSSL RSA DV CA, valid until 2026-11-21.
- The domain registration is recorded with ENOM, INC. and expires on 2027-02-28.

What to Verify Next

An institution considering advertising, referral, data-sharing, or other commercial engagement should obtain the operator's legal name and contracting address through an independent business channel. It should also review the site's age-assurance, performer-consent, takedown, copyright, moderation, and privacy procedures, and confirm the official contact channels independently before commencing a formal relationship.

- The homepage advertises an index of 344,031 movies and provides filters for performers, tags, source sites, duration, popularity, and release date.
- The service states that it searches content across external platforms including XVideos, Pornhub, and xHamster, making source attribution and takedown governance relevant to institutional due diligence.
- The supplied page content contains no visible explanation of content provenance, performer-consent controls, moderation standards, or complaint-handling procedures.

Summary Verdict

The website presents a legitimate, established, and trustworthy online service, with no observed contradiction between its apparent identity and its operating behavior. The available historical, technical, reputational, and page-level evidence converges on a high-confidence legitimacy assessment. Normal interaction, including account login and standard use where offered, is appropriate.

Infrastructure Integrity

No CDN or WAF layer is confirmed, so protective edge infrastructure is not treated as a legitimacy factor or security mitigation in this assessment. The directly observed hosting and encrypted transport nevertheless provide a conventional, identifiable delivery posture.

Closing Assessment

Prospective users may engage normally while applying ordinary privacy, device-security, and age-appropriate-access controls expected for an adult-content service; organizations contemplating a commercial relationship should complete standard counterparty and content-governance due diligence first.

Written analysis generated 2026-08-03 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	25%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of en.wav.tv.

- The request stayed on en.wav.tv. It was not redirected to another domain. CLEAR
- Registration is published under ENOM, INC.. CLEAR
- DNS for this domain is served by awsdns-59.net, across 4 name servers. NOTED
- The registration is paid up to 2027-02-28. NOTED
- The earliest public archive of this site is from 2014-10-09. CLEAR
- It is hosted on INTERSERVER-LAX, from a server in US. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about en.wav.tv at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
