Key findings

- Automated classification: Not Scam.
- Domain age: 1 to 3 years (registration continuity).
- Public web-archive history exists since 2024.
- No flags from the reputation services TrustSniffer consulted at assessment time.

Full analysis

Overview

The website is the homepage of ЭН+ Телеком, a regional telecommunications provider serving the Irkutsk area with residential and business internet, digital television, video surveillance, networking equipment, customer support, promotions, and account services.

Scam/Impersonation Risk

No contradictions were observed across the site's identity, content, behavioral, and reputation signals. The homepage presents a coherent telecommunications business model, with no phishing, impersonation, malicious-content, or confirmed blacklist indicators. A single isolated external suspicious classification is insufficient to outweigh the site's consistent business presentation and established operating history.

- The homepage identifies ЭН+ Телеком as a regional telecommunications provider and presents internet, television, surveillance, equipment, support, and account services.
- The domain was registered in 2024 and is approximately 2.25 years old through the documented registration period.
- The site has 391 archive snapshots spanning 2024–2026, covering 3 tracked years.

Regulatory Verification Notes

The site presents business, service, contact, address, and legal information consistent with a regional corporate operator. No specific license or registration number is claimed in the supplied evidence, so regulatory authorization remains a transparency item rather than an indication of deceptive conduct. The absence of a broker-dataset match and the lack of confirmed malicious reputation support the legitimacy assessment.

- The homepage contains clear service descriptions, regional coverage information, customer support, and account-service functionality.
- The domain registrar is REGRU-RU, with registration through 2027-05-03.
- The site is served from AS197695, operated by AS-REGRU / REG.RU, Ltd, RU.
- TLS is issued by YR2 at DV validation level and is valid through 2026-10-16.

What to Verify Next

Before entering into a formal commercial arrangement, the organization's applicable telecommunications authorization and current contractual terms should be confirmed through the relevant official registry or

published corporate documentation. Contact details should be cross-checked against an independently obtained company record.

- The homepage provides a callback-contact form without an untrusted submission destination.
- The site exposes one login-capable account-service area as part of its customer-service model.
- The business model is subscription-based, covering residential and business connectivity and related paid services.

Summary Verdict

The website presents as a legitimate, established regional telecommunications provider with a coherent operating model, sustained online continuity, and no observed identity or threat contradictions. Normal interaction, including account login and standard use, is appropriate.

Infrastructure Integrity

The site resolves directly to one identified origin address on AS197695 in Russia and does not use a detected CDN or WAF. This is a neutral infrastructure characteristic: it provides a clear hosting path but does not independently establish or disprove legitimacy.

Closing Assessment

Standard customer interaction is appropriate, with routine confirmation of contractual and service details before significant commercial commitments.

Written analysis generated 2026-08-02 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	50%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

About this assessment

A trust score summarises the evidence TrustSniffer could collect about enplus-telecom.ru at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
