

Is eprocure.gov.bd legit? TrustSniffer's high-trust assessment: 90/100

eprocure.gov.bd

Verdict

90

OUT OF 100

HIGH TRUST

eprocure.gov.bd appears legitimate.

Our checks found nothing pointing to fraud. Ordinary care still applies when you pay or sign in.

Not Scam

Low Risk

Assessed 2026-08-17 by automated analysis. Classification confidence 75%.

What this site appears to be

Official Bangladesh government e-GP portal (Bangladesh Public Procurement Authority) for electronic procurement, tenders, e-contracts, and related resources and guidelines. Provides user registration, helpdesk, and downloadable documents; supported by World Bank and government bodies.

Evidence status and limitations

Evidence completeness: UNKNOWN

- The real-world operator identity was not independently verified.
- Module-level completeness metadata is unavailable for this legacy report.

What eprocure.gov.bd served when TrustSniffer captured it on 2026-08-17. The page may look different now.

Key findings

- Automated classification: Not Scam.
- Domain age: more than 10 years (registration continuity).
- Public web-archive history exists since 2011.
- No flags from the reputation services TrustSniffer consulted at assessment time.

Full analysis

Overview

This website is Bangladesh's national e-Government Procurement (e-GP) portal, presenting electronic tenders, annual procurement plans, e-contracts, procurement guidance, user registration, helpdesk support, and related public-sector resources. Its apparent purpose is to support government procurement and contract-management activities through a public-service platform administered by the Bangladesh Public Procurement Authority (BPPA).

Scam/Impersonation Risk

No contradictions were observed across the site's identity, content, historical, and reputation signals: there were no findings of phishing, brand impersonation, malicious activity, or suspicious page content. The homepage clearly presents a government procurement function, with navigation for tenders, contracts, registration, guidelines, and BPPA-related resources, rather than a concealed commercial or speculative business model. Automated interaction testing did detect hidden form elements associated with the login workflow, including password-form elements, but found no external password submission, suspicious inline scripts, cloaking, wallet activity, or external network activity. This is a technical observation requiring normal account-security awareness,

not evidence of impersonation or compromise. The site also has a long-established and continuous web presence, a strong global traffic footprint, and clean results across the evaluated external reputation checks.

EVIDENCE

- The homepage identifies the service as the “National e-Government Procurement (e-GP) Portal of the Government of the People’s Republic of Bangladesh” and provides links to eTenders, eContracts, user registration, and helpdesk support.
- Domain continuity dates to 2011, with an established age of 15.18 years.
- Web archives record 400 snapshots spanning 2011–2026, covering 16 tracked years with a maximum observed gap of 1 year.
- The login workflow was observed with hidden form elements during automated testing; no external password forms or suspicious scripts were detected.

Regulatory Verification Notes

The site’s identity and purpose are consistent with a government procurement portal: the homepage and related About, Contact, and resource areas identify BPPA and describe public tendering, contract management, procurement guidelines, and registration requirements. No financial-services license or commercial registration number is claimed, which is consistent with the stated public-sector service model; any organization participating in procurement should nevertheless confirm the applicable institutional eligibility and registration requirements independently. The real-world operator identity is not independently verified by the available evidence, so the institutional attribution should be treated as apparent and evidence-consistent rather than proven. The site’s transport security provides additional technical support for an established service.

EVIDENCE

- The homepage and About content identify BPPA as the administering authority for Bangladesh’s national e-GP system.
- The site provides procurement guidelines, mandatory registration documents, information-security policy material, and helpdesk resources under its resources and support areas.
- TLS uses an OV certificate issued by DigiCert Global G2 TLS RSA SHA256 2020 CA1 for Bangladesh Public Procurement Authority (BPPA), valid through 2027-01-14.
- The site was served through AS54253, ORCL-CHICAGO-PP — Oracle Corporation, US.

What to Verify Next

Before credential submission or consequential procurement activity, an organization should independently confirm BPPA’s institutional authority and the applicable procurement-registration requirements through official government channels. Account administrators should also compare the portal’s login, password-recovery, support, and document-download processes with independently sourced BPPA communications, and review the site’s published information-security and registration requirements before onboarding users.

EVIDENCE

- The site publishes Contact Us, Help Desk Support, registration-flow, and registration-manual resources for comparison with independently sourced institutional information.
- The site provides an Information Security Policy and Mandatory Registration Documents within its resources area.
- The site's stated functions are procurement tendering, contract management, registration, and public-sector reporting rather than commercial sales.

Summary Verdict

The available evidence supports a high-trust, low-risk posture consistent with an established, apparently legitimate government public-service website. The trust conclusion is well supported by converging content, historical, technical, and reputation signals, while the independent connection to the real-world operator remains unconfirmed.

Infrastructure Integrity

The site resolves to one identified likely origin address, with no CDN or WAF detected and no separate edge-IP layer observed. Hosting on Oracle's public-cloud infrastructure provides an identifiable technical context and is a modest mitigating signal, but infrastructure characteristics alone do not establish institutional identity.

EVIDENCE

- Resolved hosting infrastructure: 1 unique IP, 0 detected edge IPs, and 1 likely origin IP.
- Hosted on AS54253, ORCL-CHICAGO-PP — Oracle Corporation, US.
- The hosting country is recorded as the United States, with ARIN as the registry.

Closing Assessment

Normal browsing and ordinary portal use are proportionate to the available evidence; before credential or payment-related interactions, ordinary independent checks of institutional identity, applicable terms, and available payment protections should be completed.

Written analysis generated 2026-08-17 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	UNVERIFIED
Identity score	55/100
Identity verification confidence	60%

- Identity verified on page

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of eprocure.gov.bd.

- The request stayed on eprocure.gov.bd. It was not redirected to another domain. CLEAR
- The earliest public archive of this site is from 2011-06-13. CLEAR
- It is hosted on ORCL-CHICAGO-PP, from a server in US. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about eprocure.gov.bd at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
