Key findings

- Automated classification: Not Scam.
- Public web-archive history exists since 1999.
- No flags from the reputation services TrustSniffer consulted at assessment time.
- The operator behind the site could not be independently connected to a real-world brand or person.

Full analysis

Overview

EtherTech is an established Australian business-to-business technology provider presenting managed IT support, networking, cloud services, cybersecurity, business internet, VoIP, Microsoft 365, backup, hosting, and consulting services, with revenue apparently derived from service engagements, licensing, subscriptions, and fixed monthly support contracts.

Scam/Impersonation Risk

No identity contradictions, phishing indicators, brand impersonation, or confirmed malicious reputation signals were observed. The site's long operating history, consistent corporate presentation, and clean external threat reputation converge strongly against an impersonation or scam interpretation. Interactive testing also found no cloaking, hidden forms, credential forwarding, clipboard manipulation, cryptocurrency-wallet behavior, or suspicious scripts.

- The domain was registered in 1999 and is approximately 27.5 years old.
- The web archive contains 260 snapshots spanning 25 January 1999 to 19 May 2026, representing 28 years of tracked history without detected suspicious repurposing.
- External reputation checks recorded 0 malicious and 0 suspicious classifications, no safe-browsing alert, no external blacklist finding, and 0 reported infrastructure-abuse incidents.
- The tested homepage contained no login form or sensitive form and exhibited no hidden-form or brand-impersonation behavior.

Regulatory Verification Notes

The registrant identity, EtherTech Pty Ltd, aligns with the EtherTech brand and the Australian hosting organization, providing coherent corporate attribution. The website supplies policies and conventional business-contact disclosures, but the available page evidence does not establish a specific regulatory licence or registration number. For a general IT and telecommunications services provider, that absence is best treated as a procurement and scope-of-service verification point rather than evidence of illegitimacy. No matching third-party broker profile was identified; this has limited relevance because the site does not present itself as a financial broker.

- Domain registration records identify ETHERTECH PTY LTD as the owner and Domain Directors Pty Ltd trading as Instra as the registrar.
- The homepage identifies the site as a corporate managed-services operation and provides policy, help-desk, support, and contact pathways.

- The site's transport encryption uses a DV certificate issued by YR2, valid to 4 September 2026.
- The reviewed business-model disclosures make no claim to a specific licence, licensing authority, or licence number.

What to Verify Next

Enterprise onboarding should confirm the contracting entity and Australian business registration directly from procurement documents, reconcile the published physical location and telephone channel with independent corporate records, and obtain the relevant service schedules, data-processing terms, security responsibilities, incident-notification commitments, subcontractor details, and hosting or data-residency provisions. Where cybersecurity, backup, cloud, or connectivity services are being purchased, due diligence should also request current assurance evidence and test the operational support-escalation process.

- The homepage publishes a business telephone number, a Dandenong, Victoria address, and customer testimonials suitable for independent corroboration.
- The service catalogue covers security-sensitive functions including Acronis Cyber Protect, backup and disaster recovery, private and public cloud, server and network support, and business connectivity.
- The site markets services to sectors including healthcare, defence and military, finance and legal services, transportation, manufacturing, and mining, making contractual security and data-handling controls material to customer due diligence.

Summary Verdict

The website presents as a legitimate, established, and trustworthy corporate service provider. Its identity, historical continuity, reputation, technical behavior, and substantive business content are mutually consistent, with no observed contradictory risk signals.

Infrastructure Integrity

The site resolves directly to infrastructure operated by EtherTech Pty Ltd in Australia, without a CDN or WAF intermediary; this creates a straightforward alignment between the named business and hosting environment. Direct origin visibility is normal for this deployment and is not evidence of abuse, although it provides less edge-layer shielding than a CDN-backed architecture.

- The site is served from AS17463 (ETHERTECH-AS-AP — EtherTech Pty Ltd, AU) at 203.12.248.175.
- Infrastructure resolution identified one likely origin address, no edge addresses, and no detected CDN.

Closing Assessment

Normal interaction, including account login and standard use, is appropriate; enterprise customers should apply ordinary supplier-onboarding and contractual due-diligence controls proportionate to the services being procured.

Written analysis generated 2026-07-31 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	UNVERIFIED
--------	------------

Identity score	30/100
Identity verification confidence	50%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of ethertech.com.au.

- The request stayed on ethertech.com.au. It was not redirected to another domain. [CLEAR](#)
- Registration is published under Domain Directors Pty Ltd trading as Instra. [CLEAR](#)
- DNS for this domain is served by com.au, across 3 name servers. [NOTED](#)
- The earliest public archive of this site is from 1999-01-25. [CLEAR](#)
- It is hosted on ETHERTECH-AS-AP, from a server in AU. [NOTED](#)

About this assessment

A trust score summarises the evidence TrustSniffer could collect about ethertech.com.au at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
