

Is eurometal.com.gr legit? TrustSniffer's high-trust assessment: 100/100

eurometal.com.gr

Verdict

100

OUT OF 100

HIGH TRUST

eurometal.com.gr appears legitimate.

Our checks found nothing pointing to fraud. Ordinary care still applies when you pay or sign in.

Not Scam

Low Risk

Assessed 2026-08-20 by automated analysis. Classification confidence 50%.

What this site appears to be

Official website of EUROMETAL ABEE, a Greek company (est. 1997) producing metal safety barriers, steel constructions and providing galvanizing and installation services. Contains company history, certifications (ISO/TÜV mentions), product categories, contact info and cookie/privacy notice.

Evidence status and limitations

Evidence completeness: UNKNOWN

- The real-world operator identity was not independently verified.
- Module-level completeness metadata is unavailable for this legacy report.

What eurometal.com.gr served when TrustSniffer captured it on 2026-08-20. The page may look different now.

Key findings

- Automated classification: Not Scam.
- Domain age: more than 10 years (registration continuity).
- Public web-archive history exists since 2007.
- No flags from the reputation services TrustSniffer consulted at assessment time.

Full analysis

Overview

Eurometal.com.gr is the corporate website of EUROMETAL ABEE, presenting a Greek industrial manufacturer and installer of metal road-safety barriers, steel constructions, hot-dip galvanizing, engineering, and related installation services for business customers.

Scam/Impersonation Risk

No contradictions were observed. The homepage and company pages present a coherent industrial B2B business model, identifying EUROMETAL ABEE and describing road-safety systems, bridge barriers, tunnel structures, steel buildings, galvanizing, and installation services rather than soliciting financial or credential-related activity. The contact page provides a physical business location and telephone contact, while technical and behavioral inspection found no login form, hidden sensitive form, wallet interaction, cloaking, or suspicious script activity. Available external reputation checks found no malicious or suspicious detections, although reputation coverage was partial. The website's historical record also shows continuity rather than suspicious repurposing.

EVIDENCE

- The homepage identifies EUROMETAL ABEE and describes metal road barriers, steel constructions, galvanizing, and installation services.
- The company and history pages describe operations dating from 1997 and continuity with an earlier Greek metal-barrier manufacturer.
- The contact page publishes the address “24ο χλμ Εθνικής Οδού Αθηνών - Κορίνθου, Μάνδρα” and a Greek telephone number.
- Registration continuity indicates approximately 19.12 years of domain age; archival records contain 116 snapshots spanning 2007–2025 across 19 tracked years.

Regulatory Verification Notes

The site’s legal and corporate presentation is consistent with an established industrial manufacturer, and it references ISO/TÜV-related quality credentials. No financial, investment, or other regulated-service licence is claimed, which is consistent with the manufacturing and installation activities described; however, the available evidence does not independently verify the operator’s real-world identity or the cited certifications. The site includes contact, privacy, and cookie information, but procurement or regulated-counterparty onboarding should still establish the contracting entity and confirm any certification relevant to the proposed work. A broker-intelligence check returned no match and should be treated only as contextual reputational support, not as a licensing determination.

EVIDENCE

- The company page names EUROMETAL ABEE and describes its industrial history and activities.
- Product and services pages identify road-safety barriers, steel structures, hot-dip galvanizing, installation, marking, and photovoltaic support structures.
- The site references ISO/TÜV credentials but does not provide independently verified certificate details in the supplied evidence.
- The site is served from AS396982 (GOOGLE-CLOUD-PLATFORM – Google LLC, US); its TLS certificate is issued by YR1 at DV validation level and is valid to 2026-10-01.

What to Verify Next

Before a commercial engagement, the prospective counterparty should confirm the contracting entity and authority of the named representative through an independently obtained corporate or procurement record. Any relevant ISO/TÜV certificate should be checked with the issuing body, and contractual terms should identify warranty, installation responsibility, delivery conditions, and applicable dispute arrangements. Payment controls should use a protected business-payment method, with bank-account details confirmed through an independently sourced contact route rather than relying solely on newly received instructions.

EVIDENCE

- The company and contact pages provide the business name, operating description, physical location, and telephone contact needed for independent confirmation.
- The site separates product categories from installation and galvanizing services, allowing the proposed scope of work to be matched against the stated business activities.
- The site includes privacy and cookie notices, while the supplied evidence does not independently validate the referenced quality certifications.

Summary Verdict

Available evidence is consistent with an established, apparently legitimate corporate website and supports a high-trust, low-risk posture. The assessment does not independently prove the real-world identity of the operator, so legitimacy should be understood as evidence-consistent rather than conclusively verified.

Infrastructure Integrity

The website is protected by Cloudflare CDN/WAF infrastructure, with the observed edge address associated with Google Cloud Platform; no origin candidate was exposed in the analysis. This protective configuration reduces direct origin exposure and is a mitigating infrastructure signal, but it is not by itself proof of corporate legitimacy.

Closing Assessment

Normal browsing and routine business engagement appear proportionate to the assessed posture, while independent entity, certification, contract, and payment checks should be completed before credentials or funds are exchanged.

Written analysis generated 2026-08-20 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	50%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of eurometal.com.gr.

- The request stayed on eurometal.com.gr. It was not redirected to another domain. [CLEAR](#)
- The earliest public archive of this site is from 2007-07-05. [CLEAR](#)

- It is hosted on GOOGLE-CLOUD-PLATFORM, from a server in US. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about eurometal.com.gr at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
