Full analysis

Overview

Exchange Solutions is an established business-to-business SaaS website presenting AI-assisted loyalty management, personalized promotions, customer engagement, real-time analytics, and marketing-technology integrations for enterprise and mid-market organizations. Its apparent commercial model is conventional contract-based software sales initiated through demonstrations, requests for proposals, and direct engagement rather than consumer deposits or investment returns.

Scam/Impersonation Risk

No identity contradictions, brand impersonation, phishing indicators, malicious reputation findings, or deceptive financial mechanics were observed. The corporate presentation is consistent with an enterprise loyalty-software provider, while the long-established domain, extensive historical record, ordinary professional social presence, and absence of sensitive or concealed forms provide strong provenance. Observed third-party requests were attributable to recognizable analytics, marketing, video, consent-management, and anti-abuse technologies; testing found no cloaking, wallet interaction, clipboard interference, or credential submission to external forms.

- The domain registration record shows registration in 1999 (~27.39 years old) through Namescout.com, with expiry on 2027-03-16.
- The web archive contains 331 snapshots spanning 2001–2026 (26 years tracked), with no detected suspicious repurposing or established semantic drift.
- The homepage identifies the service as the “Exchange Solutions Loyalty Platform” and links to corporate presences on LinkedIn and YouTube.
- Homepage interaction testing found 0 hidden forms, 0 password forms submitted externally, no cloaking, and no detected brand impersonation.

Regulatory Verification Notes

The website describes an enterprise software service rather than a brokerage, investment platform, deposit-taking service, or crypto product. Its homepage provides corporate office and contact information and references legal policies, security, compliance, client support, and cookie controls. No financial-services licence is claimed, but the supplied content does not establish that such a licence would be relevant to this SaaS business model. The registration record's privacy service is an administrative detail and does not undermine the consistent corporate identity or the site's established provenance; no adverse broker-profile match was identified.

- The homepage presents loyalty-program administration, AI-powered personalization, promotional campaign management, analytics, and enterprise integrations, with sales conducted through demos, RFPs, and direct

contracts.

- The homepage provides access to privacy information, security and compliance material, industry resources, client support, and corporate contact channels.
- The site is served from AS16509 (AMAZON-02 — Amazon.com, Inc., US).
- The site’s transport encryption uses a DV certificate issued by Amazon RSA 2048 M01, valid to 2027-01-15.

What to Verify Next

Prospective enterprise customers should apply standard supplier-onboarding controls: confirm the contracting entity and authorized representatives against the proposed agreement, obtain current security and privacy documentation, and assess data-processing terms, subprocessors, retention controls, service levels, and integration permissions against internal requirements. Official commercial and support channels should also be confirmed through independently sourced corporate contact details before executing contracts or changing payment instructions.

- The homepage directs prospective customers toward demonstrations, product information, integrations, and RFP-based engagement, making contractual due diligence the appropriate control point.
- The homepage discloses third-party analytics, advertising, video, and preference-management cookies through a consent interface.
- The observed technology stack includes Google reCAPTCHA, HubSpot, LinkedIn Insight, YouTube, CookieYes, ZoomInfo, KickFire, and SproutVideo, supporting a focused subprocessor and data-flow review.
- The homepage exposes no sensitive form and no form with an untrusted submission destination.

Summary Verdict

The website is legitimate, established, and trustworthy, with strong convergence among its coherent corporate purpose, longstanding provenance, clean external reputation, professional content, and benign observed behavior. No contradictory evidence was identified, and normal interaction—including account login and standard use—is appropriate.

Infrastructure Integrity

The site uses mainstream Amazon-hosted delivery infrastructure, valid encrypted transport, and web-protection technology associated with Cloudflare. These controls reduce direct infrastructure exposure and support availability and transport integrity, although protective infrastructure is not treated independently as proof of legitimacy.

Closing Assessment

Prospective users may engage with the site normally, while enterprise purchasers should complete their organization’s routine vendor, privacy, security, and contracting review before deployment.

Written analysis generated 2026-07-31 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	LIKELY
--------	--------

Identity score	76/100
Identity verification confidence	38%

- Trusted social count=2

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of exchangesolutions.com.

- The request stayed on exchangesolutions.com. It was not redirected to another domain. [CLEAR](#)
- Registration is published under Namescout.com. [CLEAR](#)
- DNS for this domain is served by awsdns-28.org, across 4 name servers. [NOTED](#)
- The registration is paid up to 2027-03-16. [NOTED](#)
- The earliest public archive of this site is from 2001-03-31. [CLEAR](#)
- It is hosted on AMAZON-02, from a server in US. [NOTED](#)

About this assessment

A trust score summarises the evidence TrustSniffer could collect about exchangesolutions.com at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that

evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
