Key findings

- Automated classification: Not Scam.
- Domain age: more than 10 years (registration continuity).
- Public web-archive history exists since 2010.
- No flags from the reputation services TrustSniffer consulted at assessment time.

Full analysis

Overview

Express Urdu is an established Pakistani Urdu-language news portal presenting breaking news, regional and international reporting, sports, business, entertainment, health, technology, fact-checking, opinion, video, live coverage, and digital newspaper access, supported primarily through advertising and consent-managed audience monetization.

Scam/Impersonation Risk

No identity contradictions, phishing indicators, brand impersonation, malicious reputation findings, or deceptive financial solicitations were observed. The site's long operating history, deep archival record, substantial global traffic footprint, consistent news-publishing identity, and clean external reputation converge strongly in support of legitimacy. The homepage contained no login form, hidden form, sensitive-data collection form, cryptocurrency functionality, wallet connection, clipboard manipulation, cloaking, or suspicious inline scripts.

- The domain registration record shows registration on 31 October 2010, making it approximately 15.77 years old, with expiration recorded as 31 October 2028.
- Historical records contain 5,000 archive snapshots spanning 16 May 2010 to 25 February 2022, covering 13 tracked years; no suspicious repurposing or semantic drift was detected.
- The homepage identifies itself as "Express News | Express News Urdu | Latest Urdu News" and presents an extensive, coherent news and current-affairs catalogue.
- External reputation checks recorded zero malicious and zero suspicious detections, no search-safety finding, no external blacklist finding, and a global traffic rank of 57,858.

Regulatory Verification Notes

The site operates as a news and media publication rather than a financial, investment, or brokerage service. It makes no licensing claim, and the evidence provides no basis for treating financial-services authorization as applicable to its ordinary publishing activities. The homepage provides identifiable media-group context together with policy and contact links; no conflicting legal-entity names were found. Its advertising and personalized-content model is accompanied by consent controls, which is consistent with the disclosed commercial purpose.

- The homepage describes a news-publishing service comprising articles, live coverage, videos, blogs, and Urdu, English, and Sindhi e-paper access.
- The homepage exposes consent management for personalized advertising and content and shows one advertising network.

- The site is served from AS13335 (Cloudflare, Inc., US).
- The site’s transport encryption uses a WE1-issued domain-validated TLS certificate, valid until 1 October 2026.

What to Verify Next

For formal procurement, advertising placement, syndication, or other contractual engagement, the contracting entity and authorized commercial contact should be confirmed against the site’s published policy and contact materials. Organizations processing personal data through the platform should also review the applicable privacy and consent terms against their own jurisdictional requirements. These are routine counterparty and privacy checks, not responses to an identified security concern.

- The homepage provides visible pathways for advertising, contact information, and policy material that can support counterparty validation.
- The homepage’s consent interface expressly covers personalized advertising and content processing.
- Behavioral testing completed two successful runs without console errors, hidden forms, password forms posting externally, cloaking, fingerprinting, or executable wallet activity.

Summary Verdict

The website is legitimate, established, and trustworthy. Its mature publishing presence, coherent identity, strong historical continuity, meaningful audience footprint, clean reputation, and benign observed behavior support normal interaction, including account login and standard use where offered.

Infrastructure Integrity

The website uses Cloudflare’s CDN and WAF, with all four observed IPv4 and IPv6 addresses operating as AS13335 edge endpoints. The origin server was shielded behind that mainstream protective architecture, reducing direct infrastructure exposure; this is a mitigating security control rather than independent proof of legitimacy.

Closing Assessment

Prospective users may engage with the website normally, while organizations entering commercial or data-processing relationships should apply their standard counterparty, privacy, and contractual due-diligence procedures.

Written analysis generated 2026-08-04 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	50%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of [express.pk](#).

- The request stayed on [express.pk](#). It was not redirected to another domain. CLEAR
- DNS for this domain is served by [cloudflare.com](#), across 2 name servers. NOTED
- The registration is paid up to 2028-10-31. CLEAR
- The earliest public archive of this site is from 2010-05-16. CLEAR
- It is hosted on CLOUDFLARENET, from a server in US. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about [express.pk](#) at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
