

Is facebook-connect.com a scam? TrustSniffer's high-risk assessment: 0/100

facebook-connect.com

Verdict

0

OUT OF 100

CRITICAL RISK

facebook-connect.com shows high-risk / scam indicators.

This assessment found strong scam indicators. Do not pay, sign in, or share personal details with this site.

Sensitive Interaction Risk

Governance Risk

Assessed 2026-08-21 by automated analysis. Classification confidence 55%.

What this site appears to be

Company site for Anhui-based electrical wire and cable manufacturer offering product listings, certifications, contact info and company background. The content is heavily injected with repetitive SEO/keyword phrases (notably '365bet' strings) suggesting possible automated or spammy template usage, but no phishing, payment solicitations, or credential harvesting is present.

Evidence status and limitations

- Evidence completeness: UNKNOWN
- The real-world operator identity was not independently verified.
 - Module-level completeness metadata is unavailable for this legacy report.

At a glance

The checks that decide most of this verdict.		
Malware engines	16 flagged it VirusTotal	RISK
Google Safe Browsing	Listed as unsafe Google	RISK
Abuse reports on the host	0 reports AbuseIPDB; shared hosting inflates this count	NOTED

The page as captured

<https://facebook-connect.com/>

What facebook-connect.com served when TrustSniffer captured it on 2026-08-21. The page may look different now.

Key findings

- Automated classification: Sensitive Interaction Risk.
- Domain age: 3 to 10 years (registration continuity).
- Public web-archive history exists since 2011.
- At least one reputation service TrustSniffer consulted had flagged this domain at assessment time.

Full analysis

Security Alert

Google, Kaspersky, Sophos flagged this site in external intelligence checks, indicating elevated compromise/scam exposure that requires immediate caution.

The website presents itself as an Anhui-based manufacturer and seller of industrial and specialty electrical wires and cables, with product listings, company information, certifications, and direct-sales contact details for business customers.

Scam/Impersonation Risk

The site carries a clearly elevated security risk because multiple external reputation sources identify it as malicious or blacklisted, including a Google Safe Browsing malicious finding and 16 malicious detections with two additional suspicious detections. The website's apparent manufacturing purpose is also materially inconsistent with the homepage title and page text, which contain repetitive betting-related phrases such as "365bet" and references to sports-betting software; this is consistent with keyword injection or compromised-

template activity. No identity contradiction, brand impersonation, or phishing form was observed in the captured page, and no payment solicitation, credential-harvesting form, or hidden sensitive form was present; those limited benign observations do not offset the confirmed external threat findings.

EVIDENCE

- The homepage presents electrical-wire and cable products but uses a title and repeated page text containing “365bet” and sports-betting phrases.
- External reputation checks recorded Google Safe Browsing as malicious, 16 malicious detections, two suspicious detections, and a confirmed blacklist status across Google Safe Browsing, VirusTotal, and another external blacklist source.
- The homepage capture contained no login form, hidden form, password-external form, or wallet interaction.

Regulatory Verification Notes

The apparent business model is conventional B2B manufacturing and direct product sales, but the site’s legal and regulatory status remains unverified. No license, licensing authority, or registration number is claimed in the supplied business analysis, and the on-page disclosure state is unclear; this is a verification gap rather than independent proof of misconduct. The registration record identifies NameSilo, LLC as registrar and uses privacy registration details, while the available technical evidence confirms only that the domain and transport layer exist—not which real-world entity operates the website. The low authority signal and the absence of a matched broker record provide contextual information only and do not establish legal status.

EVIDENCE

- The company, product, and contact sections describe electrical-wire and cable manufacturing and sales but do not provide a stated licensing authority or license number.
- The domain was registered in 2022 and is approximately 3.89 years old; the registrar is NameSilo, LLC.
- The site is served from AS398823, identified as PEG-LA - PEG TECH INC, US.
- The site uses a DV TLS certificate issued by YR2, valid through 2026-11-02.

What to Verify Next

Sensitive interaction should be suspended pending independent confirmation of the operating company and the site’s security status. A prospective counterparty should confirm the manufacturer’s legal registration, physical business presence, product certifications, and any permits relevant to the proposed transaction through authoritative registries or independently sourced records. Contact details should be validated through an offline or independently obtained channel rather than relying solely on the website. Security teams should also check the domain against current protective controls before allowing browsing from corporate networks, and procurement teams should require payment protections that preserve recourse.

EVIDENCE

- The company-introduction, certifications, and contact pages are the relevant locations for validating the claimed manufacturer identity and product credentials.
- The page content is marked by a claim-evidence discrepancy and heavy keyword stuffing, making independent confirmation of company claims necessary.
- The captured site has no sensitive form, so validation should occur through independent corporate and commercial channels rather than through on-site account interaction.

Summary Verdict

The overall posture is **critical trust risk** with a high likelihood that the website or its current content has been compromised, abused, or otherwise associated with malicious activity. The site's stated industrial-manufacturing purpose is not sufficient to overcome the confirmed external detections and material content inconsistency, and the real-world operator remains unverified.

Infrastructure Integrity

The site resolves directly to infrastructure operated by PEG-LA - PEG TECH INC in the United States, with no CDN edge identified and no WAF or CDN vendor detected in the supplied infrastructure analysis. The directly exposed hosting arrangement provides no meaningful mitigating protection against the established reputation concerns.

EVIDENCE

- Infrastructure resolution identified one unique IP address and one likely origin address.
- No CDN was detected, and no edge IPs were identified.
- The hosting provider is PEG-LA - PEG TECH INC, US, using AS398823.

Closing Assessment

Corporate security, procurement, and payment teams should treat the website as unsuitable for login, credential submission, or financial interaction unless and until independent business validation and a clean security assessment materially change the evidence.

Written analysis generated 2026-08-21 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

2 findings contributed to this verdict, raised by registration and ownership, analysis engine, external reputation.

01 Governance Risk

- Registration details are held behind a privacy service, so no operator is named publicly. This is common and legal, and it also means there is nobody to check.

Registration and ownership rule:KF_WHOIS_PRIVATE

- The registration record withholds contact details for the operator.

Registration and ownership rule:KF_WHOIS_HIDDEN

02 Sensitive Interaction Risk

- The analysis matched a pattern TrustSniffer treats as a direct threat to a visitor.
Analysis engine signal:direct_threat
- An external threat feed lists this domain: either Google Safe Browsing marked it malicious, or a significant number of malware engines flagged it.
External reputation rule:EXT_BLACKLIST_CRITICAL

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	25%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of facebook-connect.com.

- The request stayed on facebook-connect.com. It was not redirected to another domain. [CLEAR](#)
- Registration is published under NameSilo, LLC. [CLEAR](#)
- DNS for this domain is served by dnsowl.com, across 3 name servers. [NOTED](#)
- The registration is paid up to 2026-09-29. [NOTED](#)
- The earliest public archive of this site is from 2011-02-02. [CLEAR](#)
- It is hosted on PEG-LA, from a server in US. [NOTED](#)

About this assessment

A trust score summarises the evidence TrustSniffer could collect about facebook-connect.com at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
