

Is familyaddons.org safe? TrustSniffer's low-trust assessment: 44/100

familyaddons.org

Verdict

44

OUT OF 100

LOW TRUST

familyaddons.org is low-trust and potentially risky.

Several risk patterns were present. Do not send money or personal details until you have verified this business another way.

Governance Risk

Dynamic Interaction Caution

Assessed 2026-09-24 by automated analysis. Classification confidence 55%.

What this site appears to be

Official-looking project page for Family Addons, a free Hypixel Skyblock utility mod for Fabric 26.2 and legacy 1.21.11. It lists 80+ modules across categories, provides GUI previews, detailed feature lists, and step-by-step installation instructions. No payment or account is requested; downloads are promoted directly.

Evidence status and limitations

Evidence completeness: UNKNOWN

- The real-world operator identity was not independently verified.
- Module-level completeness metadata is unavailable for this legacy report.

The page as captured

<https://familyaddons.org/>

What familyaddons.org served when TrustSniffer captured it on 2026-09-24. The page may look different now.

Key findings

- Automated classification: Governance Risk.
- Domain age: less than 1 year (registration continuity).
- No flags from the reputation services TrustSniffer consulted at assessment time.
- The operator behind the site could not be independently connected to a real-world brand or person.

Full analysis

Security Alert

Fortinet flagged this site in external intelligence checks, indicating elevated compromise/scam exposure that requires immediate caution.

The website is a project page for Family Addons, a free Minecraft Fabric utility mod for Hypixel Skyblock. It presents more than 80 gameplay modules, GUI previews, compatibility information for Fabric 26.2 and legacy 1.21.11, installation instructions, and direct downloads, with no apparent payment or account-creation model.

Scam/Impersonation Risk

No confirmed impersonation, phishing, identity contradiction, or other direct contradiction was observed. The homepage presents a coherent software-download purpose, contains no login or sensitive-data form, and requests no payment or account registration. However, external security screening recorded a suspicious result and a Tier-1 threat detection associated with the site; this is a material reputational warning even though no confirmed malicious classification or confirmed listing was recorded. The site should therefore be treated as an unverified download source rather than as an established software publisher.

EVIDENCE

- The homepage identifies Family Addons as a free Fabric mod and presents download, feature, GUI, installation, and FAQ sections without a login or sensitive-information form.
- Behavioral inspection recorded no external XHR requests, no hidden forms, no wallet activity, no clipboard-hijacking behavior, and no cloaking.
- External screening recorded 1 suspicious result and a Tier-1 detection from Fortinet, while malicious detection was false.
- The domain was registered on 2026-08-07 and is approximately 0.13 years old.

Regulatory Verification Notes

The apparent business model is low-risk in commercial terms because the site distributes software without subscriptions, payments, or account creation. Nevertheless, the real-world operator remains unverified, and the available legal, identity, and governance disclosures do not establish a clearly accountable company or publisher. No formal license or registration claim is presented; for a software project this may be unsurprising, but it remains a transparency gap when assessing download provenance and responsibility for the distributed files. Registration was performed through Web Commerce Communications Limited dba WebNic.cc, which is an administrative fact rather than proof of operator legitimacy.

EVIDENCE

- The homepage and installation/FAQ content describe free software distribution and do not identify a verified corporate operator or licensing authority.
- The domain registration record lists Web Commerce Communications Limited dba WebNic.cc as registrar.
- The site is hosted on AS13335, Cloudflare, Inc.; the technical provider does not independently establish the publisher's identity.
- The site's TLS certificate was issued by WE1 at Domain Validation level and is valid to 2026-11-08.

What to Verify Next

Before downloading or executing the JAR files, an organization should independently confirm that the release originates from an established project channel, compare file hashes or signatures where available, and scan each file in a controlled environment. The operator's identity and any applicable project or distribution licensing should be confirmed through an independent source, and the download should not be used on systems containing sensitive credentials until those checks are complete.

EVIDENCE

- The download page promotes direct JAR distribution but the supplied content does not establish an independently verified publisher identity.
- The installation guidance identifies the target Minecraft and Fabric versions, providing a basis for checking whether the downloaded file matches the stated release.
- The homepage contains no payment or account workflow, so verification should focus on file provenance, publisher accountability, and execution safety.

Summary Verdict

The overall posture is **low trust**. The site has a coherent and apparently benign software-download presentation, but its recent registration, unverified operator identity, and external security detection prevent it from being treated as an established or independently validated publisher. No direct scam or impersonation contradiction was confirmed.

Infrastructure Integrity

Cloudflare CDN and WAF protection sit in front of the website, and all observed addresses were CDN edge infrastructure rather than an independently exposed origin. This reduces direct origin exposure and can improve resilience, but it is only a mitigating technical control and does not validate the site or its downloadable files.

Closing Assessment

Restrict use to passive review until the publisher, release provenance, and downloaded file integrity have been independently established; execution on sensitive systems or use involving credentials should wait for those checks.

Written analysis generated 2026-09-24 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

2 findings contributed to this verdict, raised by registration and ownership, behaviour in a sandbox.

- 01 Governance Risk

 - The public registration record for this domain is incomplete.

Registration and ownership rule:KF_WHOIS_INCOMPLETE
- 02 Dynamic Interaction Caution

 - A large share of what the page loaded came from other domains.

Behaviour in a sandbox rule:BEHAV_EXTERNAL_RATIO_MODERATE

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	50%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of familyaddons.org.

- The request stayed on familyaddons.org. It was not redirected to another domain.

CLEAR
- Registration is published under Web Commerce Communications Limited dba WebNic.cc.

CLEAR

- DNS for this domain is served by cloudflare.com, across 2 name servers. NOTED
- The registration is paid up to 2027-08-07. NOTED
- It is hosted on CLOUDFLARENET, from a server in US. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about familyaddons.org at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
