

Is fiord.ru legit? TrustSniffer's high-trust assessment: 90/100

fiord.ru

Verdict

90

OUT OF 100

HIGH TRUST

fiord.ru appears legitimate.

Our checks found nothing pointing to fraud. Ordinary care still applies when you pay or sign in.

Not Scam

Safe for Login

Low Risk

Assessed 2026-08-11 by automated analysis. Classification confidence 75%.

What this site appears to be

Website for NTC Fiord, a Russian telecommunications operator (since 2002) offering IP-transit, dedicated channels, data-center and DDoS protection services. Contact details and corporate information are present.

Evidence status and limitations

Evidence completeness: UNKNOWN

- The real-world operator identity was not independently verified.
- Module-level completeness metadata is unavailable for this legacy report.

Key findings

- Automated classification: Not Scam.
- Domain age: more than 10 years (registration continuity).
- Public web-archive history exists since 2002.
- No flags from the reputation services TrustSniffer consulted at assessment time.

Full analysis

Overview

The website is the corporate homepage of NTC Fiord, a Russian telecommunications operator presenting business connectivity and infrastructure services, including IP transit, dedicated communication channels, data-center services, and DDoS protection. Its stated purpose is to attract corporate clients for contracted network and hosting services, supported by company information, network-capacity claims, service descriptions, and contact facilities.

Scam/Impersonation Risk

No contradictions were observed across the supplied evidence: there were no phishing or impersonation indicators, blacklist findings, malicious detections, or conflicting legal identities. The homepage presents a coherent B2B telecommunications model rather than a deceptive investment or consumer-payment proposition, describing IP transit, dedicated channels, data-center services, and DDoS protection. The site also identifies the business as established since 2002 and provides corporate contact and location information, although the real-world operator identity remains independently unverified. This supports an apparently legitimate, low-risk assessment without proving the operator's identity.

EVIDENCE

- The homepage identifies NTC Fiord as a telecommunications company and describes IP transit, dedicated channels, data-center, and DDoS-protection services.
- The homepage states that the company was created in 2002 and presents corporate contact details and a Moscow office address.
- External reputation checks recorded 0 malicious detections, 0 suspicious detections, and no blacklist hit; the domain had a global traffic rank of 32068 and was in the top 1 million.
- Historical records show 307 archive snapshots spanning 2002–2025, covering 24 tracked years.

Regulatory Verification Notes

The available pages provide a business description, service catalogue, corporate information, contact details, privacy-policy link, and a contact-request form. No licensing authority or license number is identified in the supplied content; for a telecommunications provider, that is a verification item rather than evidence of deception. The site's available technical and historical indicators are consistent with an established operating presence, while the operator's real-world identity and regulatory standing should remain qualified rather than treated as independently verified.

EVIDENCE

- The homepage presents the company's network claims, including 16 Tbit/s of DWDM backbone capacity, 5 Tbit/s of IP/MPLS core capacity, more than 1,000 km of backbone, and seven network nodes.
- The domain was registered on 2002-01-24 and is 24.56 years old; registration is through RU-CENTER-RU, with expiry on 2027-01-28.
- Hosting is on AS51369, FIORD-RU-AS - LLC _TRC FIORD_, RU; the network registry is RIPE NCC.
- The site has a valid DV TLS certificate issued by YE1, valid through 2026-09-09.

What to Verify Next

Before credential or payment interactions, an enterprise counterparty should independently confirm the legal entity behind the site, validate any telecommunications authorization applicable to the proposed service in the relevant registry, and confirm contractual terms, service levels, billing details, and payment-protection arrangements through independently sourced contact channels. The contact-request form should be used only after those counterpart checks are complete.

EVIDENCE

- The contact page and homepage provide a named business, office location, telephone number, and service-specific contact route for independent comparison.
- The terms, corporate-information, and privacy materials should be reviewed for the contracting entity, governing law, service commitments, and dispute provisions.
- The supplied evidence identifies no license authority or license number, leaving that item for independent regulatory confirmation.

Summary Verdict

Available evidence is consistent with an established, apparently legitimate corporate website with a high-trust, low-risk posture. No scam, phishing, impersonation, or other contradictory signal was identified, but the operator's real-world identity is not independently verified; the assessment therefore supports normal business consideration with ordinary counterparty controls.

Infrastructure Integrity

The site resolves directly to infrastructure associated with FIORD-RU-AS rather than a mainstream CDN or WAF, with three likely origin addresses and no detected edge IPs. This provides less intermediary shielding than a CDN-backed deployment, but the identified hosting relationship and valid transport encryption are mitigating technical signals rather than proof of legitimacy.

Closing Assessment

Proceed with standard enterprise onboarding, independent counterparty checks, contractual review, and payment-protection controls before committing credentials, services, or funds.

Written analysis generated 2026-08-11 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	50%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of fiord.ru.

- The request stayed on fiord.ru. It was not redirected to another domain. CLEAR
- Registration is published under RU-CENTER-RU. CLEAR
- DNS for this domain is served by 185.231, across 3 name servers. NOTED
- The registration is paid up to 2027-01-28. NOTED
- The earliest public archive of this site is from 2002-06-03. CLEAR
- It is hosted on FIORD-RU-AS, from a server in RU. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about fiord.ru at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
