

Is fkpd.net a scam? TrustSniffer's high-risk assessment: 5/100

fkpd.net

Verdict

5

OUT OF 100

CRITICAL RISK

fkpd.net shows high-risk / scam indicators.

This assessment found strong scam indicators. Do not pay, sign in, or share personal details with this site.

Sensitive Interaction Risk

Governance Risk

Assessed 2026-08-19 by automated analysis. Classification confidence 55%.

What this site appears to be

FKPD Project Development is a Bahrain-based construction and project development firm presenting services (design, BIM, LSTK, MEP, project management), a list of featured projects and clients, contact phone and full postal address, and a brief company/about section.

Evidence status and limitations

Evidence completeness: UNKNOWN

- The real-world operator identity was not independently verified.
- Module-level completeness metadata is unavailable for this legacy report.

What fkpd.net served when TrustSniffer captured it on 2026-08-19. The page may look different now.

Key findings

- Automated classification: Sensitive Interaction Risk.
- Domain age: more than 10 years (registration continuity).
- Public web-archive history exists since 2012.
- At least one reputation service TrustSniffer consulted had flagged this domain at assessment time.

Full analysis

Overview

The website is the corporate presentation of FKPD Project Development, a Bahrain-based construction and project-development firm offering design, engineering, BIM, construction, project-management, and related services to corporate and government clients. Its visitor-facing purpose is to present the company, service capabilities, projects, clients, company documents, careers, and contact details rather than to operate a consumer financial or credential-collection service.

Scam/Impersonation Risk

The site's visible content is consistent with a conventional corporate construction profile, and page-level inspection found no login form, sensitive submission form, wallet connection, cloaking, or suspicious browser activity. However, this benign presentation is materially outweighed by confirmed external reputation contradictions: the domain is blacklisted by the evaluated sources, including two named blacklist sources, and four external detections classified it as malicious, with one additional suspicious detection. These findings create a direct risk of harmful interaction or a compromised or misrepresented corporate presence, even though no conflicting legal-entity names, explicit brand impersonation, or phishing form were observed. The website publishes the contact address `+973-17-250 227` as a contact-channel integrity anomaly requiring independent

confirmation before it is relied upon. The domain itself is long-established, but age and a coherent corporate presentation do not neutralize the confirmed reputation conflict.

EVIDENCE

- Domain registration: 2010-10-25T07:59:19Z; registered 2010 (~15.83 years old).
- Archival record first seen 2012-08-12T08:59:18Z and last seen 2026-04-20T03:07:32Z, spanning 15 years of tracked history; archival coverage is sparse.
- The homepage returned HTTP 200 during two successful behavioral runs, with zero external network activity, zero hidden forms, and no detected wallet or credential-handling behavior.
- External reputation evaluation recorded 4 malicious and 1 suspicious detections and confirmed blacklist status from VT and EXTERNAL_BLACKLIST.

Regulatory Verification Notes

The About, Company Documents, Services, Projects, Clients, and Contact pages provide a named business presentation, a Bahrain location, a telephone number, a full postal address, and descriptions of construction and engineering work. The available evidence does not independently verify the real-world operator, and the site does not claim or display a licensing authority or license number; for a construction and project-development business, that is a regulatory and corporate-disclosure item requiring confirmation rather than proof of wrongdoing. A third-party broker-intelligence check did not produce a match, but that result is contextual only and does not establish licensing or legal standing. Technical controls provide limited supporting evidence: the site uses valid domain-validated TLS issued by YR2, while the hosting record identifies GoDaddy.com, LLC.

EVIDENCE

- The homepage and About/Company Documents navigation identify “FKPD Project Development” and present company, service, project, and contact sections.
- The site’s contact page displays the Bahrain telephone number and full postal address described in the page content.
- Hosted on AS26496 (AS-26496-GO-DADDY-COM-LLC - GoDaddy.com, LLC, US).
- TLS certificate: issuer YR2; validation level DV; valid to 2026-09-24T01:34:37+00:00.

What to Verify Next

Before any login, credential disclosure, payment, contract exchange, or reliance on the site’s contact details, an organization should independently confirm FKPD Project Development through Bahrain’s relevant commercial and construction-sector registries. The claimed postal address, telephone channel, company documents, project references, and client references should be corroborated through independently sourced records or an offline route, and any digitally supplied documents should be validated separately. Security teams should also review the confirmed blacklist and malicious-detection findings through their own approved incident-response or vendor workflow before allowing the domain in enterprise communications or transaction processes.

EVIDENCE

- The site presents company documents and project/client claims but does not display a license authority or license number in the supplied page evidence.
- The identity-verification status is “likely” rather than independently verified, with limited supporting social-presence signals.
- The site has no login or sensitive form, so any future request for credentials, payment, or document upload would represent a material change in interaction risk.

Summary Verdict

The overall posture is **critical trust risk** with a high likelihood of harmful consequences for sensitive interactions. The corporate appearance and technically stable page behavior are insufficient to overcome the confirmed external reputation contradictions, so the site should not be treated as a trusted endpoint for credentials, financial activity, or business-critical exchanges.

Infrastructure Integrity

The website is protected by CDN/WAF infrastructure, and the observed address was an edge address rather than an independently visible origin server. This reduces direct exposure of the origin and may limit some network-level attacks, but it is only a mitigating infrastructure characteristic and does not establish the legitimacy of the website or offset the reputation findings.

Closing Assessment

Enterprise users should restrict the site to tightly controlled, non-sensitive reference activity while independent corporate, regulatory, and security validation is completed; login, credential, payment, and other consequential interactions should remain suspended pending that validation.

Written analysis generated 2026-08-19 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

2 findings contributed to this verdict, raised by registration and ownership, analysis engine, external reputation.

01 Governance Risk

- Registration details are held behind a privacy service, so no operator is named publicly. This is common and legal, and it also means there is nobody to check.

Registration and ownership rule:KF_WHOIS_PRIVATE

- The registration record withholds contact details for the operator.

Registration and ownership rule:KF_WHOIS_HIDDEN

02 Sensitive Interaction Risk

- The analysis matched a pattern TrustSniffer treats as a direct threat to a visitor.
Analysis engine signal:direct_threat
- An external threat feed lists this domain: either Google Safe Browsing marked it malicious, or a significant number of malware engines flagged it.
External reputation rule:EXT_BLACKLIST_CRITICAL

Identity verification

Status	LIKELY
Identity score	76/100
Identity verification confidence	38%

- Trusted social count=2

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of fkpd.net.

- The request stayed on fkpd.net. It was not redirected to another domain. [CLEAR](#)
- Registration is published under GoDaddy.com, LLC. [CLEAR](#)
- DNS for this domain is served by domaincontrol.com, across 2 name servers. [NOTED](#)
- The registration is paid up to 2026-10-25. [NOTED](#)
- The earliest public archive of this site is from 2012-08-12. [CLEAR](#)
- It is hosted on AS-26496-GO-DADDY-COM-LLC, from a server in US. [NOTED](#)

About this assessment

A trust score summarises the evidence TrustSniffer could collect about fkpd.net at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
