

Is floppaclient.org safe? TrustSniffer's low-trust assessment: 48/100

floppaclient.org

Verdict

48

OUT OF 100

LOW TRUST

floppaclient.org is low-trust and potentially risky.

Several risk patterns were present. Do not send money or personal details until you have verified this business another way.

Governance Risk

Assessed 2026-09-24 by automated analysis. Classification confidence 55%.

What this site appears to be

Site provides information and downloads for Floppa Client, a free Minecraft (Fabric) mod focused on automating Hypixel Skyblock dungeons. Includes feature lists, module descriptions, installation steps, FAQs, and download links. No payment flows or requests for sensitive credentials are present in the captured content.

Evidence status and limitations

- Evidence completeness: UNKNOWN
- The real-world operator identity was not independently verified.
 - Module-level completeness metadata is unavailable for this legacy report.

The page as captured

<https://floppaclient.org/>

What floppaclient.org served when TrustSniffer captured it on 2026-09-24. The page may look different now.

Key findings

- Automated classification: Governance Risk.
- Domain age: less than 1 year (registration continuity).
- No flags from the reputation services TrustSniffer consulted at assessment time.
- The operator behind the site could not be independently connected to a real-world brand or person.

Full analysis

Security Alert

Fortinet flagged this site in external intelligence checks, indicating elevated compromise/scam exposure that requires immediate caution.

The website is a free software-download site presenting Floppa Client, a Fabric-based Minecraft modification intended to automate and enhance Hypixel Skyblock dungeon gameplay through downloadable files, feature documentation, installation instructions, and FAQs.

Scam/Impersonation Risk

No confirmed phishing, impersonation, blacklist, or identity-contradiction signals were observed. The homepage presents Floppa Client as a free Minecraft modification and claims capabilities including secret finding, terminal solving, etherwarp-route visualization, and dungeon automation, with more than 60 modules. This is a software-distribution use case rather than a payment or credential-collection flow, and the captured pages contained no login forms, sensitive forms, or requests for credentials. However, external reputation analysis recorded one suspicious detection, including a Fortinet flag, so the downloadable software should not be treated as inherently safe solely because the page itself is informational. Evidence:

- The homepage describes Floppa Client as a free Fabric mod with automated dungeon, rendering, movement, and puzzle-solving modules.
- The captured homepage contained no login form, sensitive form, external password form, or wallet interaction.
- External evaluation recorded 1 suspicious result, 0 malicious results, and 1 Fortinet flag; Google Safe Browsing did not identify the site as malicious.

Regulatory Verification Notes

The operator's real-world identity remains unverified, and the available site content does not establish a corporate entity, publisher identity, or licensing authority for the software. No license or registration number is claimed in the supplied content. This is a transparency and provenance gap rather than evidence of a scam, particularly because no contradictory legal identities or impersonation indicators were observed. The domain is recently registered, which limits the amount of operating history that can reasonably be attributed to it. Evidence:

- Domain registration is dated 2026-08-07, with an age of 0.13 years; registrar: Web Commerce Communications Limited dba WebNic.cc.
- The homepage provides product, download, installation, FAQ, archive, and credits content but does not identify a verified legal operator or licensing authority.
- Hosted on AS13335, CLOUDFLARENET - Cloudflare, Inc., US; TLS certificate issued by WE1 with DV validation, valid to 2026-11-08.

What to Verify Next

Before executing the downloaded modification, an interested party should independently confirm the publisher's identity through an official project channel, compare the file and release information against that source, and inspect the software in an isolated environment with current endpoint protection. Any claimed compatibility with Minecraft, Fabric, or Hypixel should also be checked against the applicable platform rules and the independently obtained release documentation. Evidence:

- The homepage supplies downloadable files and installation instructions, creating a specific software artifact whose publisher, release provenance, and integrity can be checked independently.
- The site presents credits and FAQ sections that can be compared with an independently sourced project identity.
- The captured content shows no payment or credential workflow, so verification should focus on software provenance and execution safety rather than transaction authorization.

Summary Verdict

The overall posture is **low trust** with moderate analytical uncertainty. The site appears to provide a genuine informational software-download function and has no observed scam or impersonation contradiction, but the unverified operator identity, recent registration, and external suspicious detection prevent a positive trust conclusion.

Infrastructure Integrity

The website is protected by a Cloudflare CDN/WAF, and all observed network addresses were CDN edge servers rather than identifiable origin infrastructure. This reduces direct exposure of the origin and is a mitigating security control, but it does not independently establish the legitimacy of the publisher or the safety of downloaded software. Evidence:

- Four observed addresses were identified as CDN edge addresses, with 0 likely origin addresses.
- The observed edge infrastructure was associated with Cloudflare and included 104.21.35.247.

Closing Assessment

Prospective users should keep engagement limited to independent verification and controlled, non-sensitive evaluation until the publisher identity and software provenance have been established through separate trusted channels.

Written analysis generated 2026-09-24 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

1 finding contributed to this verdict, raised by registration and ownership.

01 Governance Risk

- The public registration record for this domain is incomplete.
Registration and ownership rule:KF_WHOIS_INCOMPLETE

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	50%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of floppaclient.org.

- The request stayed on floppaclient.org. It was not redirected to another domain. CLEAR
- Registration is published under Web Commerce Communications Limited dba WebNic.cc. CLEAR
- DNS for this domain is served by cloudflare.com, across 2 name servers. NOTED
- The registration is paid up to 2027-08-07. NOTED
- It is hosted on CLOUDFLARENET, from a server in US. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about floppaclient.org at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
