

Is fmovies-to.me safe? TrustSniffer's low-trust assessment: 40/100

fmovies-to.me

Verdict

40

OUT OF 100

LOW TRUST

fmovies-to.me is low-trust and potentially risky.

Several risk patterns were present. Do not send money or personal details until you have verified this business another way.

Sensitive Interaction Risk

Governance Risk

Assessed 2026-08-20 by automated analysis. Classification confidence 55%.

What this site appears to be

Landing page for 'Business Communicator', a B2B platform promoting company profiles, direct messaging, and audio/video meetings with an affiliate program and free account signup. Content is marketing-oriented with multilingual labels and repeated descriptive text; no clear contact or regulatory information visible.

Evidence status and limitations

Evidence completeness: UNKNOWN

- The real-world operator identity was not independently verified.
- Module-level completeness metadata is unavailable for this legacy report.

Key possibilities

For companies

What fmovies-to.me served when TrustSniffer captured it on 2026-08-20. The page may look different now.

Key findings

- Automated classification: Sensitive Interaction Risk.
- Domain age: 1 to 3 years (registration continuity).
- Public web-archive history exists since 2024.
- At least one reputation service TrustSniffer consulted had flagged this domain at assessment time.

Full analysis

Overview

The website presents itself as “Business Communicator,” a B2B SaaS and marketplace platform intended to help companies create profiles, promote products and services, communicate directly with business contacts, conduct audio and video meetings, and participate in an affiliate program, with free account registration offered from the landing page.

Scam/Impersonation Risk

The site presents no obvious phishing form, brand impersonation, or overtly fraudulent content on its landing page; the observed form is a signup form rather than a login or password-collection form. However, this benign page presentation is outweighed by confirmed blacklist listings and multiple external malicious or suspicious detections. Runtime analysis also identified a suspicious network interpretation, substantial external activity, repeated console errors, and material DOM changes after interaction. These signals support a clearly cautionary posture for credentials, account creation, or other sensitive engagement. The apparent Business Communicator identity remains unverified, although no conflicting legal-entity names were observed.

EVIDENCE

- The homepage describes company profiles, business chat, audio/video meetings, global visibility, partner networking, and an affiliate program, with one signup form and no login form.
- External reputation checks recorded 2 malicious and 2 suspicious detections, with confirmed blacklist status from multiple sources.
- Runtime observation recorded 26 external XHR requests, 6 external POST requests, 6 console errors, and a maximum post-interaction DOM difference of 397 elements.
- Historical records show 3 archive snapshots from 2024 through 2025, covering 2 years; the WHOIS creation date is 2025-06-24 and the recorded registration age is 1.15 years.

Regulatory Verification Notes

The presented business model is a conventional B2B communications service, but the available landing-page content does not clearly identify a legal operator, regulatory status, or licensing basis. No license or registration number is claimed, and no clear contact or regulatory information is visible. For this type of SaaS offering, that is a material disclosure gap requiring independent confirmation rather than a standalone finding of fraud. The site's identity is therefore not independently verified, and the confirmed external reputation concerns remain the dominant trust consideration.

EVIDENCE

- The homepage identifies the service as "Business Communicator" but does not visibly provide clear legal, contact, or regulatory disclosures.
- The stated monetization model comprises SaaS listings, premium features, and an affiliate program; no licensing authority or license number is presented.
- The site's TLS certificate is DV-validated, issued by YE2, and valid through 2026-09-17.

What to Verify Next

Before any sensitive interaction, independently establish the operating entity through an authoritative corporate registry and confirm that the entity owns or operates the service. Confirm the official support and contact channels through an independent route, and obtain contractual terms covering data handling, account termination, service delivery, and dispute resolution. Credentials, business communications, or proprietary information should not be submitted until those checks reconcile the service identity and operating arrangements.

EVIDENCE

- The homepage is a landing/signup page rather than a page providing independently verifiable operator credentials.
- The stated services involve company profiles, direct business communications, and audio/video meetings, making operator and data-handling verification directly relevant.
- The affiliate-program presentation creates an additional need to confirm payment, referral, and contractual terms before participation.

Summary Verdict

The overall posture is **low trust with elevated sensitive-interaction risk**. The website’s commercial presentation is coherent at the content level, but the external threat detections and unresolved operator identity prevent the available evidence from supporting legitimacy for account, credential, or financially consequential use.

Infrastructure Integrity

The site is protected by a CDN/WAF layer, which is a mitigating control against direct exposure and may reduce infrastructure-level attack surface, but it is not evidence that the operator is legitimate. The observed edge infrastructure resolves to OVH - OVH SAS in France, and the origin server was not observable during analysis.

EVIDENCE

- Served from AS16276 (OVH - OVH SAS, FR), edge IP 188.165.23.19, France.
- CDN/WAF status: enabled; 1 edge IP observed and 0 likely origin IP candidates.
- TLS certificate issuer: YE2; validation level: DV; valid to 2026-09-17.

Closing Assessment

The appropriate decision is to defer sensitive engagement until independent operator, contact, and contractual checks are completed; current evidence supports at most limited, non-sensitive observation.

Written analysis generated 2026-08-20 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

2 findings contributed to this verdict, raised by registration and ownership, analysis engine, behaviour in a sandbox.

01 Governance Risk

- The registration record withholds contact details for the operator.
Registration and ownership rule:KF_WHOIS_HIDDEN
- The public registration record for this domain is incomplete.
Registration and ownership rule:KF_WHOIS_INCOMPLETE

02 Sensitive Interaction Risk

- The analysis matched a pattern TrustSniffer treats as a direct threat to a visitor.
Analysis engine signal:direct_threat
- Most of what the page loaded came from other domains rather than from this one.
Behaviour in a sandbox rule:BEHAV_EXTERNAL_RATIO_HIGH

Identity verification

Status	UNVERIFIED
Identity score	30/100

Identity verification confidence	25%
----------------------------------	-----

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of fmovies-to.me.

- The request stayed on fmovies-to.me. It was not redirected to another domain. CLEAR
- Registration is published under OVH SAS. CLEAR
- The registration is paid up to 2027-06-24. NOTED
- The earliest public archive of this site is from 2024-03-24. CLEAR
- It is hosted on OVH, from a server in FR. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about fmovies-to.me at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
