

Is foodforjoy.in a scam? TrustSniffer's high-risk assessment: 0/100

foodforjoy.in

Verdict

0

OUT OF 100

CRITICAL RISK

foodforjoy.in shows high-risk / scam indicators.

This assessment found strong scam indicators. Do not pay, sign in, or share personal details with this site.

Sensitive Interaction Risk

Assessed 2026-08-20 by automated analysis. Classification confidence 55%.

What this site appears to be

A personal food blog showing recipe listings (Udupi cuisine, baking, pickles etc.), social links, and a search box. No login, payment, or crypto features visible.

Evidence status and limitations

Evidence completeness: UNKNOWN

- The real-world operator identity was not independently verified.
- Module-level completeness metadata is unavailable for this legacy report.

At a glance

The page as captured

<https://foodforjoy.in/>

What foodforjoy.in served when TrustSniffer captured it on 2026-08-20. The page may look different now.

Key findings

- Automated classification: Sensitive Interaction Risk.
- Domain age: more than 10 years (registration continuity).
- Public web-archive history exists since 2012.
- At least one reputation service TrustSniffer consulted had flagged this domain at assessment time.

Full analysis

Security Alert

Fortinet, Sophos flagged this site in external intelligence checks, indicating elevated compromise/scam exposure that requires immediate caution.

Food For Joy is a personal recipe blog by Pratiba presenting Udupi cuisine, baking, pickles, festival dishes, and related food articles, with social-media links and a search function; its apparent business model is audience-supported publishing rather than commerce, investment, or financial services.

Scam/Impersonation Risk

The site's visible content is consistent with a personal food blog and the page analysis found no login, payment, cryptocurrency, wallet, or other sensitive interaction features. However, this benign presentation is materially contradicted by external security detections: 14 evaluations identified the domain as malicious, one additional evaluation was suspicious, Fortinet and Sophos were among the flagged vendors, and the domain appears on confirmed blacklist sources. No distinct legal-entity identity contradiction or page-level brand impersonation was identified, but the external reputation conflict is sufficient to create a severe risk for credentials, downloads, or any other sensitive interaction. The literal contact-channel anomaly is **not** present in the supplied evidence.

EVIDENCE

- Homepage analysis classifies the site as “Food For Joy - by Pratiba,” a food and personal blog with recipe listings and no sensitive form.
- External security telemetry recorded 14 malicious and 1 suspicious detections, including flags from Fortinet and Sophos.
- The domain was registered on 2012-07-18 and has an age of 14.1 years.
- Historical coverage records the domain from 2012-08-31 through 2025-08-13, spanning 14 tracked years.

Regulatory Verification Notes

The available site content does not present a financial, investment, brokerage, or payment business model, so no regulatory authorization claim is apparent from the homepage. It also does not establish the real-world operator's identity independently; the connection to the named author is assessed as likely rather than verified. The domain is registered through GoDaddy.com, LLC, which is an administrative fact and not evidence that the website itself is endorsed or regulated. No separate third-party broker match was identified. The principal regulatory concern is therefore verification uncertainty, while the critical security posture arises from the external reputation contradiction rather than from a licensing issue.

EVIDENCE

- Homepage content identifies the author as “Pratiba” and presents recipes, categories, social links, and a search function.
- Registration records identify GoDaddy.com, LLC as registrar and “Self” as the registrant organization.
- Hosting telemetry identifies AS394695, PUBLIC-DOMAIN-REGISTRY - PDR, US.
- The site uses a DV TLS certificate issued by YR2, valid through 2026-09-28.

What to Verify Next

Before any sensitive interaction, an enterprise should independently confirm that the domain and its linked social profiles are the intended official channels, obtain a current malware and redirect assessment from controlled security infrastructure, and check whether the site introduces downloads, external forms, or payment requests after navigation. Any future commercial, sponsorship, or financial claim should be validated through an independently sourced business identity and, where applicable, the relevant regulatory registry. Credentials or financial information should not be submitted unless the external detections have been resolved and the destination has been separately confirmed.

EVIDENCE

- The homepage exposes one search form and no login, password, payment, or wallet-connection form.
- The page links to Facebook, Twitter, Instagram, and LinkedIn, providing channels for independent cross-checking.
- Behavioral analysis recorded no cloaking, hidden forms, wallet activity, clipboard hijacking, or suspicious inline scripts.
- The site is identified as a WordPress installation with jQuery and a single analytics tracker.

Summary Verdict

The overall posture is **critical and unsuitable for sensitive interaction**. Although the presented content appears to be an ordinary personal recipe blog and the operator connection is plausible, the confirmed external reputation contradictions take precedence over the benign page presentation. Identity remains likely rather than independently verified.

Infrastructure Integrity

The site resolves to PUBLIC-DOMAIN-REGISTRY - PDR, US, on AS394695, with infrastructure located in India; no CDN, edge-IP layer, or origin-candidate separation was identified. The recorded infrastructure is technically resolved and provides no independent basis for legitimacy, while the absence of an identified protective edge layer leaves the hosting posture comparatively direct.

Closing Assessment

Until the external detections are independently cleared, activity should remain limited to passive viewing in a controlled, fully updated environment, with no credential submission, downloads, or financial interaction.

Written analysis generated 2026-08-20 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

1 finding contributed to this verdict, raised by analysis engine, external reputation.

01 Sensitive Interaction Risk

- The analysis matched a pattern TrustSniffer treats as a direct threat to a visitor.
Analysis engine signal:direct_threat
- An external threat feed lists this domain: either Google Safe Browsing marked it malicious, or a significant number of malware engines flagged it.
External reputation rule:EXT_BLACKLIST_CRITICAL

Identity verification

Status	LIKELY
Identity score	80/100
Identity verification confidence	80%

- Trusted social count=4

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of foodforjoy.in.

- The request stayed on foodforjoy.in. It was not redirected to another domain. CLEAR
- Registration is published under GoDaddy.com, LLC. CLEAR
- DNS for this domain is served by bluehost.in, across 2 name servers. NOTED

- The registration is paid up to 2029-07-18. CLEAR
- The earliest public archive of this site is from 2012-08-31. CLEAR
- It is hosted on PUBLIC-DOMAIN-REGISTRY, from a server in IN. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about foodforjoy.in at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
