

Is framer.com legit? TrustSniffer's high-trust assessment: 100/100

framer.com

Verdict

100

OUT OF 100

HIGH TRUST

framer.com appears legitimate.

Our checks found nothing pointing to fraud. Ordinary care still applies when you pay or sign in.

Not Scam

Safe for Login

Low Risk

Assessed 2026-08-23 by automated analysis. Classification confidence 65%.

What this site appears to be

Official marketing/product site for Framer: an AI-driven website builder offering design agents, CMS, hosting, integrations and a marketplace. Content and metrics indicate an established SaaS product.

Evidence status and limitations

- Evidence completeness: UNKNOWN
- The real-world operator identity was not independently verified.
 - Module-level completeness metadata is unavailable for this legacy report.

What framer.com served when TrustSniffer captured it on 2026-08-23. The page may look different now.

Key findings

- Automated classification: Not Scam.
- Domain age: more than 10 years (registration continuity).
- Public web-archive history exists since 1998.
- No flags from the reputation services TrustSniffer consulted at assessment time.

Full analysis

Overview

Framer.com is the official marketing and product website for Framer, an AI-driven website-building platform that presents design agents, CMS and publishing tools, hosting, developer integrations, enterprise services, and a creator marketplace, with subscriptions and related ecosystem services as its apparent business model.

Scam/Impersonation Risk

No scam, phishing, impersonation, blacklist, or identity-conflict indicators were observed. The homepage presents a coherent SaaS offering rather than a high-risk financial or cryptocurrency operation, and the site analysis identified no sensitive external forms, hidden forms, wallet activity, cloaking, or malicious behavior. Browser telemetry did record substantial third-party request activity and console errors, but these were not accompanied by abuse patterns or credential-capture behavior and are consistent with a complex interactive product site. Available reputation checks were clean, and the historical record supports continuity rather than suspicious repurposing.

EVIDENCE

- Domain registration records show creation on 1996-12-30, with an age of 29.67 years.
- The web archive records 4,318 snapshots spanning 1998–2026, with 29 years tracked.
- The homepage was identified as a marketing/product page for an AI website builder, with no red flags and no suspected brand impersonation.
- The homepage behavior analysis found no hidden forms, password-external forms, wallet activity, clipboard hijacking, or cloaking.

Regulatory Verification Notes

The available evidence is consistent with an established, apparently legitimate software provider, but the real-world operator identity is not independently verified. The site content describes a hosted SaaS service and does not claim a financial or regulatory license; this is a transparency point only if a particular service or jurisdiction would make such licensing relevant. The homepage provides structured product navigation, pricing, login, signup, enterprise, and resource areas, while the wider technical and reputational signals support an established web presence. A reputable corporate registrar and recognized hosting and certificate infrastructure provide additional administrative and technical context, but neither independently proves the operator's legal identity.

EVIDENCE

- The domain is registered through CSC Corporate Domains, Inc., with expiration recorded as 2027-12-29.
- The site is served from AS16509, identified as Amazon-02 - Amazon.com, Inc., US.
- The site's TLS certificate is issued by ZeroSSL ECC DV SSL CA 2, uses DV validation, and is valid through 2026-11-06.
- The homepage has a high page-authority classification and links to Twitter, GitHub, and LinkedIn presence.

What to Verify Next

Before credential or payment interactions, an organization should independently confirm the legal entity responsible for the service, review the applicable subscription, cancellation, refund, and data-processing terms, and determine whether any specific enterprise use case requires jurisdictional licensing or contractual protections. Official support and billing channels should be confirmed through independently sourced corporate information rather than relying solely on contact details encountered in an unsolicited message.

EVIDENCE

- The homepage exposes pricing, login, signup, enterprise, and resource navigation relevant to commercial due diligence.
- The stated business model is subscription-based SaaS with enterprise plans, marketplace components, hosting, CMS, and developer integrations.
- The site's transport encryption and certificate validity can be checked directly during any planned account or payment workflow.

Summary Verdict

Available evidence is consistent with an established, apparently legitimate website and supports a high-trust, low-risk posture for ordinary interaction. The evidence does not independently verify the real-world operator identity, so legitimacy should be regarded as strongly supported rather than proven.

Infrastructure Integrity

The supplied facts do not establish a separate CDN, WAF, or origin-IP posture. Infrastructure is therefore treated as technical context only and not as independent proof of legitimacy.

Closing Assessment

Normal evaluation may proceed, provided ordinary independent checks of merchant identity, service terms, and payment protections are completed before credentials or payment details are submitted.

Written analysis generated 2026-08-23 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	LIKELY
Identity score	76/100
Identity verification confidence	76%

- Trusted social count=2

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of framer.com.

- The request stayed on framer.com. It was not redirected to another domain. CLEAR
- Registration is published under CSC Corporate Domains, Inc.. CLEAR
- DNS for this domain is served by awsdns-42.org, across 4 name servers. NOTED
- The registration is paid up to 2027-12-29. CLEAR
- The earliest public archive of this site is from 1998-12-07. CLEAR
- It is hosted on AMAZON-02, from a server in NL. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about framer.com at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
