

Is gametrade.jp safe? TrustSniffer's moderate-trust assessment: 60/100

gametrade.jp

Verdict

60

OUT OF 100

MODERATE TRUST

gametrade.jp is moderately trusted.

Most signals looked ordinary, and some evidence was missing. Read the checks below before you pay or hand over personal details.

Safe for Read-Only

Assessed 2026-08-04 by automated analysis. Classification confidence 45%.

What this site appears to be

Japanese GameTrade marketplace homepage featuring game-account, virtual-item, in-game currency, and service listings. It includes registration and login links, transaction and payment guides, corporate and legal-policy links, operational notices, rankings, recent listings, and buyer reviews.

Key findings

- Automated classification: Safe for Read-Only.
- No flags from the reputation services TrustSniffer consulted at assessment time.
- The operator behind the site could not be independently connected to a real-world brand or person.

Full analysis

Overview

The website is a Japanese two-sided marketplace for buying and selling game accounts, virtual items, in-game currency, and related services, with transaction-fee and payment-handling functions that include seller-balance withdrawals.

Scam/Impersonation Risk

No phishing, brand impersonation, conflicting legal identities, or other identity contradictions were observed. The homepage presents a coherent marketplace rather than a deceptive credential-harvesting flow, and external reputation checks found no active threat classification. Its material risk arises from the transaction model: users exchange transferable accounts, currencies, and services for games such as Fortnite, FGO, Roblox, VALORANT, and Genshin Impact, while the platform exercises custodial control over transaction funds. Individual listings may involve credential or account-transfer mechanisms, including transfer codes and publisher-linked IDs; these create counterparty, recovery, and game-publisher enforcement risks even without evidence of site-level fraud.

- The marketplace homepage displays current listings with yen-denominated prices, account inventories, server designations, and transfer arrangements.
- The homepage provides registration and login links but presented no hidden form, external password destination, wallet interaction, clipboard manipulation, cloaking, or suspicious script behavior during two successful interaction runs.
- External reputation telemetry recorded 0 malicious and 0 suspicious detections, no harmful browsing classification, no reported hosting-IP abuse, and a global traffic rank of 59,043.
- The homepage's account-sale and payment model includes platform handling of funds and subsequent seller withdrawals.

Regulatory Verification Notes

The available homepage links to company information, transaction guidance, fees and payment methods, policies, support, and legal materials, which is consistent with an operational marketplace. However, the supplied page evidence does not establish a clearly identified operating legal entity, corporate registration particulars, or a claimed regulatory authorization; ownership and governance transparency therefore remain limited. No third-party broker profile was matched, but that is reputational context only and does not determine the marketplace's legal or regulatory status.

- The homepage navigation includes company and legal-policy links alongside transaction, fee, payment, support, and frequently asked question materials.

- No licensing authority, licence number, or verified regulatory claim appears in the analyzed marketplace content.
- The hosting infrastructure serves the site from AS16509 (Amazon.com, Inc., US).
- The site's transport encryption uses a DV certificate issued by Amazon RSA 2048 M04, valid to 2027-01-15.

What to Verify Next

Before a high-value transaction, the operating company's name and registration details should be reconciled against the company and legal-policy pages and an applicable official corporate registry. The marketplace's escrow or payment-release conditions, withdrawal restrictions, dispute process, refund allocation, and account-recovery responsibilities should be reviewed before funds are committed. The relevant game publisher's terms should also be checked because an otherwise valid marketplace transaction may still expose a purchased account to suspension, reversal, or recovery by its original holder. Official support channels should be confirmed independently for any sensitive dispute.

- The homepage directs users to guides covering transaction flow, account buying and selling, fees, and payment methods.
- Operational notices describe temporary interruptions affecting bank-transfer payments and applications for bank deposits of sales proceeds.
- A recent listing states that delivery occurs by transferring a Bandai Namco ID, while another references use of a transfer code.
- Marketplace listings include accounts described by platform, regional server, progression state, and quantities of virtual currency or items.

Summary Verdict

The site has a moderate trust posture and appears to be an operating, established-looking marketplace, with coherent commercial content, normal observed browser behavior, meaningful traffic, and clean external threat intelligence. No active abuse pattern or contradictory identity signal was identified, although the evidence does not support an unqualified institutional-grade assurance level.

Infrastructure Integrity

The observed deployment uses mainstream Amazon cloud infrastructure and valid encrypted transport. These controls mitigate ordinary hosting and connection-security exposure, but they are technical safeguards rather than independent proof of the operator's legitimacy or transaction performance.

Closing Assessment

Normal browsing and account login are proportionate to the observed posture; high-value or sensitive transactions should proceed only after independent identity checks and review of the applicable contractual and dispute protections.

Written analysis generated 2026-08-04 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	50%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of gametrade.jp.

- The request stayed on gametrade.jp. It was not redirected to another domain. CLEAR
- It is hosted on AMAZON-02, from a server in US. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about gametrade.jp at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
