Key findings

- Automated classification: Not Scam.
- Public web-archive history exists since 2018.
- No flags from the reputation services TrustSniffer consulted at assessment time.
- The operator behind the site could not be independently connected to a real-world brand or person.

Full analysis

Overview

The website is an established multilingual ecommerce storefront operated under the GATE brand, selling clothing, footwear, accessories, childrenswear, and home products directly to consumers while supporting customer accounts, shopping-basket functions, delivery and returns, loyalty benefits, and newsletter marketing.

Scam/Impersonation Risk

No identity contradictions, phishing indicators, brand impersonation, or malicious behavior were observed. The storefront's coherent retail purpose, long-standing provenance, substantial global traffic footprint, and clean external reputation converge strongly against a scam or impersonation interpretation. The captured newsletter form did not request sensitive information or submit data to an untrusted destination.

- The homepage presented a content-rich fashion and home-goods catalogue with coherent account, order, delivery, returns, and customer-support functions.
- The domain dates to 2018 (~7.95 years old); 168 archive snapshots span 2018–2026 (9 years tracked), with no suspicious repurposing or semantic drift detected.
- External reputation checks recorded zero malicious and zero suspicious detections, no phishing or unsafe-browsing hit, and no reported abuse.
- The domain held global traffic rank 9,585, placing it within a top-tier traffic cohort.

Regulatory Verification Notes

The observed business model is conventional consumer retail rather than a financial, brokerage, or crypto service, and the available content provides no basis for treating the site as a regulated financial entity. The storefront references customer-support, shipping, returns, privacy, and cookie-management material, although the supplied page evidence does not conclusively establish the merchant's legal-entity particulars. This is a limited due-diligence consideration for institutional contracting, not evidence of deception.

- The homepage categorized the business as direct-to-consumer fashion and home-goods ecommerce, with no cryptocurrency, investment, brokerage, or financial-manipulation features.

- The storefront exposed privacy and cookie-preference controls and described shipping, returns, and customer-support resources.
- The captured page used analytics, advertising, and affiliate technologies alongside consent-management controls.
- The available third-party broker context produced no matching broker profile; this neither establishes nor calls into question retail licensing status.

What to Verify Next

For ordinary retail use, no enhanced security restriction is indicated. Before procurement, payment-provider onboarding, or another formal enterprise relationship, the contracting party should confirm the merchant's legal name, registered address, applicable sales terms, refund obligations, and official contact channels through the checkout documentation and contractual materials.

- The storefront provides account, basket, delivery, returns, and support functions relevant to ordinary ecommerce due diligence.
- The captured content establishes a retail brand and product offering but does not conclusively identify the contracting legal entity.
- The only detected form was a newsletter email-subscription form, with no sensitive fields or untrusted submission destination.

Summary Verdict

The website is legitimate, established, and trustworthy. Its identity, operational behavior, historical presence, reputation, and commercial presentation are mutually consistent, with no contradictory risk signals identified.

Infrastructure Integrity

The site uses mainstream CDN/WAF protection, which reduces direct exposure of the underlying server and provides a meaningful infrastructure-security mitigation; it is supportive operational evidence but is not, by itself, proof of legitimacy.

- The hosting infrastructure is served from AS13335 (Cloudflare, Inc., US), with all observed addresses identified as CDN edge servers.
- The origin server was not exposed during observation, consistent with Cloudflare's reverse-proxy architecture.
- The site's transport encryption used a WE1-issued DV TLS certificate, valid to 2026-10-05.

Closing Assessment

Normal interaction—including account login, standard shopping activity, and ordinary transactions—is appropriate, subject to routine ecommerce and payment controls.

Written analysis generated 2026-08-03 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status

UNVERIFIED

Identity score	30/100
Identity verification confidence	50%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of gate.shop.

- The request stayed on gate.shop. It was not redirected to another domain. CLEAR
- The earliest public archive of this site is from 2018-08-22. CLEAR
- It is hosted on CLOUDFLARENET, from a server in US. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about gate.shop at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
