

Is getharvest.com legit? TrustSniffer's high-trust assessment: 90/100

getharvest.com

Verdict

90

OUT OF 100

HIGH TRUST

getharvest.com appears legitimate.

Our checks found nothing pointing to fraud. Ordinary care still applies when you pay or sign in.

Not Scam

Safe for Login

Low Risk

Assessed 2026-07-31 by automated analysis. Classification confidence 45%.

What this site appears to be

Harvest presents an established business SaaS platform for time tracking, expense management, profitability reporting, team planning, invoicing, and client payments. The page offers a no-credit-card 30-day trial, product documentation, customer examples, integrations, sales contact options, and legal, privacy, security, and support links.

Key findings

- Automated classification: Not Scam.
- Domain age: more than 10 years (registration continuity).
- No flags from the reputation services TrustSniffer consulted at assessment time.
- The operator behind the site could not be independently connected to a real-world brand or person.

Full analysis

Overview

Harvest is an established business-software website offering subscription-based time and expense tracking, project-profitability reporting, team-capacity planning, invoicing, and client-payment capabilities, supported by a 30-day trial, sales consultations, integrations, documentation, and customer resources.

Scam/Impersonation Risk

No identity contradictions, brand impersonation, phishing behavior, or adverse threat-reputation signals were observed. The site's long-established domain, substantial global traffic footprint, coherent Harvest branding, stable browser behavior, and absence of deceptive financial-return or cryptocurrency claims provide convergent evidence of legitimacy. The homepage contained no sensitive or hidden form, and observed outbound requests did not use untrusted destinations.

- The domain registration record shows registration on 8 February 2006—approximately 20.48 years old—through Name.com, Inc., with expiration on 8 February 2030.
- The homepage identifies itself consistently as “Time Tracking Software With Invoicing | Harvest”; automated brand analysis found no suspected impersonation.
- Homepage interaction testing completed successfully without cloaking, clipboard manipulation, wallet activity, hidden forms, externally submitted passwords, or console errors.
- External reputation checks recorded no malicious or suspicious detections, no reported abuse, and a global traffic rank of 45,768.

Regulatory Verification Notes

The site presents a conventional SaaS offering rather than an investment, brokerage, or crypto-financial service. Available navigation includes legal, privacy, security, support, pricing, and contact resources, while cookie controls disclose analytics and targeting categories. The supplied page evidence does not establish a claimed financial-services licence or identify a licensing authority; such authorisation is not inherently indicated by the described software business model. No conflicting legal-entity names were identified, and no third-party broker profile was matched.

- The homepage describes a subscription service for professional teams and offers a no-credit-card trial that may be cancelled at any time.
- The homepage provides access to legal, privacy, security, support, pricing, and sales-contact materials.

- The site's transport encryption uses a WE1-issued domain-validated TLS certificate, valid until 7 October 2026.
- The hosting endpoint is served from AS209242, operated by Cloudflare London, LLC.

What to Verify Next

Enterprise onboarding should include review of the published contractual terms, privacy commitments, security documentation, data-processing provisions, payment arrangements, and service-support commitments against the prospective customer's procurement requirements. Organizations handling regulated or sensitive records should also confirm integration permissions, retention settings, access controls, and any required assurance reports through official sales or security channels.

- The homepage directs larger-team onboarding enquiries to a dedicated sales route.
- Product navigation offers help-center and developer documentation for operational and integration review.
- The homepage advertises integrations with Asana, Slack, and Stripe, making authorization scope and data exchange relevant to enterprise assessment.
- Cookie-preference controls separately disclose analytics and targeting-cookie use.

Summary Verdict

The website is legitimate, established, and trustworthy, with strong convergence across identity, reputation, content quality, operational behavior, and technical security signals. No contradictory evidence undermines its stated business purpose, and normal interaction—including account login and standard use—is appropriate.

Infrastructure Integrity

The website is protected by Cloudflare CDN/WAF infrastructure. Both observed addresses, 199.60.103.164 and 199.60.103.64, were edge endpoints; shielding the origin reduces direct exposure and is a useful security mitigation, although protective infrastructure alone does not establish legitimacy.

Closing Assessment

Prospective users may proceed with normal use, while organizations should apply their standard SaaS procurement, security, privacy, and contractual review processes before enterprise deployment.

Written analysis generated 2026-07-31 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	25%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of getharvest.com.

- The request stayed on getharvest.com. It was not redirected to another domain. CLEAR
- Registration is published under Name.com, Inc.. CLEAR
- DNS for this domain is served by cloudflare.com, across 2 name servers. NOTED
- The registration is paid up to 2030-02-08. CLEAR
- It is hosted on CLOUDFLARESPECTRUM, from a server in US. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about getharvest.com at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
