Key findings

- Automated classification: Not Scam.
- Domain age: more than 10 years (registration continuity).
- Public web-archive history exists since 2007.
- No flags from the reputation services TrustSniffer consulted at assessment time.

Full analysis

Overview

The website is an established Polish real-estate marketplace that connects property seekers with owners, developers, and intermediaries through residential sale and rental listings, agent services, saved favourites, market content, and listing submission, with an apparent revenue model based on professional listings, lead generation, advertising, and remarketing.

Scam/Impersonation Risk

No identity contradictions, brand impersonation, phishing behaviour, deceptive financial claims, or other scam indicators were observed. The domain has a substantial operating history, an established traffic footprint, and a clean external security reputation. Interactive testing also found no hidden forms, credential forwarding, cloaking, wallet-draining behaviour, or clipboard manipulation.

- The domain record shows registration in 2016 (~10.41 years old) through nazwa.pl sp. z o.o., with registration extending to 2029.
- Historical records contain 425 archive snapshots spanning 2007–2026 (20 years tracked), with no detected suspicious repurposing or semantic drift.
- Reputation checks recorded 0 malicious and 0 suspicious classifications, no reported abuse, and inclusion within the top one million globally ranked domains.
- The homepage analysis found no sensitive or hidden forms, no untrusted form destination, and no suspected brand impersonation.

Regulatory Verification Notes

The homepage identifies Property Group Sp. z o.o. as the data controller, providing a coherent corporate identity for the service. The supplied pages do not establish a specific licensing status; however, the site presents itself as a property-listing intermediary rather than a regulated financial or investment service, so this is a matter of corporate and service-scope confirmation rather than evidence of misconduct. Its detailed consent interface discloses extensive analytics, advertising, identity, and cross-site remarketing activity, which moderately increases privacy exposure but does not undermine the site's legitimacy.

- The homepage names Property Group Sp. z o.o. as the controller responsible for personal-data processing.
- The homepage deploys Cookiebot alongside Google Analytics, Meta Pixel, Microsoft Advertising UET, ID5, User.com, and TWIPLA under a consent interface.
- The site’s transport encryption uses a WE1-issued domain-validated TLS certificate, valid until 13 September 2026.
- No matching broker profile or adverse broker-reputation signal was identified in the supplied third-party context.

What to Verify Next

For material property dealings, the prospective counterparty’s identity, authority to advertise, property title, and payment instructions should be checked independently; marketplace legitimacy does not authenticate every user-generated listing. Corporate particulars may also be reconciled with the appropriate Polish business register, and users should configure the consent interface according to their privacy preferences.

- The homepage permits listing submission and connects visitors with owners, developers, agents, and other intermediaries, making listing-level due diligence distinct from platform-level trust.
- The homepage includes agent services and professional property inventory, supporting independent confirmation of each advertiser’s mandate.
- The consent controls cover behavioural analytics, local-storage tracking, embedded third-party content, and cross-site remarketing.

Summary Verdict

The website is legitimate, established, and trustworthy, with strong convergence across identity, operational history, external reputation, and observed behaviour. Normal interaction, including account login and standard use, is appropriate.

Infrastructure Integrity

The website is protected by Cloudflare’s mainstream CDN/WAF infrastructure. All observed addresses were Cloudflare edge nodes, and the origin server was shielded from direct exposure; this reduces infrastructure exposure but is treated as a security control rather than independent proof of legitimacy.

- The hosting infrastructure is served from AS13335 (Cloudflare, Inc., US).
- Four Cloudflare edge addresses were observed—two IPv4 and two IPv6—with no origin candidate exposed during the assessment.

Closing Assessment

Normal engagement may proceed, with routine counterparty and transaction-specific due diligence applied whenever commitments or payments are involved.

Written analysis generated 2026-07-31 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status

UNVERIFIED

Identity score	30/100
Identity verification confidence	50%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of gethome.pl.

- The request stayed on gethome.pl. It was not redirected to another domain. [CLEAR](#)
- Registration is published under nazwa.pl sp. z o.o.. [CLEAR](#)
- DNS for this domain is served by cloudflare.com, across 2 name servers. [NOTED](#)
- The registration is paid up to 2029-03-07. [CLEAR](#)
- The earliest public archive of this site is from 2007-01-29. [CLEAR](#)
- It is hosted on CLOUDFLARENET, from a server in US. [NOTED](#)

About this assessment

A trust score summarises the evidence TrustSniffer could collect about gethome.pl at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that

evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
