

Is globalcompak.com a scam? TrustSniffer's high-risk assessment: 11/100

globalcompak.com

Verdict

11
OUT OF 100

CRITICAL RISK

globalcompak.com shows high-risk / scam indicators.

This assessment found strong scam indicators. Do not pay, sign in, or share personal details with this site.

Sensitive Interaction Risk

Governance Risk

Assessed 2026-08-20 by automated analysis. Classification confidence 75%.

What this site appears to be

Site shows a WordPress/PHP error: missing MySQL extension. No forms, links, or monetization elements present. Likely a misconfigured or broken site page.

Evidence status and limitations

Evidence completeness: **UNKNOWN**

- The real-world operator identity was not independently verified.
- Module-level completeness metadata is unavailable for this legacy report.

The page as captured

<https://globalcompak.com/>

Your PHP installation appears to be missing the MySQL extension which is required by WordPress.

What globalcompak.com served when TrustSniffer captured it on 2026-08-20. The page may look different now.

Key findings

- Automated classification: Sensitive Interaction Risk.
- Domain age: more than 10 years (registration continuity).
- Public web-archive history exists since 2013.
- At least one reputation service TrustSniffer consulted had flagged this domain at assessment time.

Full analysis

Overview

The website at globalcompak.com currently presents a WordPress server-diagnostic page stating that the PHP installation is missing the MySQL extension required by WordPress. It exposes no visible service, commercial offering, interactive function, or clear business purpose to visitors.

Scam/Impersonation Risk

The site carries a confirmed external reputation contradiction: it is recorded as blacklisted by multiple external sources, including detections classifying the domain as malicious and suspicious. This is materially more significant than the benign appearance of the captured page. The homepage itself contains no login form, payment mechanism, wallet function, or other active interaction surface, and no brand-impersonation indicators were identified in the page content; however, the external threat detections support a clearly cautionary posture for sensitive interaction. The domain's long registration continuity and substantial archival record provide historical context but do not override the current reputation signal or independently establish the present operator's legitimacy.

EVIDENCE

- The homepage displays a WordPress diagnostic message stating that the PHP installation is missing the required MySQL extension; no forms or interactive service elements are present.
- External reputation checks recorded 2 malicious and 2 suspicious classifications, with the domain marked as blacklisted by 2 sources.
- Domain registration evidence records creation on 2012-07-26, with an age of 14.07 years.
- Web-archive evidence records 450 snapshots from 2013-07-04 through 2026-02-28, spanning 14 years.

Regulatory Verification Notes

No usable legal, corporate, licensing, or service disclosures were available from the captured page. This is a transparency and verification gap rather than, by itself, proof of a scam; nevertheless, the absence of an identifiable business context prevents independent confirmation of what entity, if any, operates the domain. Identity verification remains unverified. The available transport security is a technical control only and does not validate the operator or any regulatory standing.

EVIDENCE

- The captured homepage contains no business description, terms, licensing statement, registration number, or identifiable legal-entity disclosure.
- The site's TLS certificate is issued by YR2 at DV validation level and is valid to 2026-10-04.
- No matching broker signal was identified in the available third-party broker-reputation context.

What to Verify Next

Sensitive interaction should remain suspended unless the operator can first be independently established. If the domain later presents financial, investment, brokerage, or payment services, the claimed entity and any claimed authorization should be checked directly with the relevant corporate and regulatory registries, using contact details obtained independently rather than relying solely on the website. The site should also be reassessed after the current server failure is resolved to determine whether its live content, ownership disclosures, and interaction flows materially change.

EVIDENCE

- The current homepage is a server-error page and does not expose the service or operator that would need to be verified.
- The available capture contains no legal, regulatory, payment, login, or customer-support workflow suitable for independent validation.

Summary Verdict

The overall posture is **critical sensitive-interaction risk**. The available evidence does not establish an independently verified operator, and the confirmed external reputation contradiction outweighs the site's limited benign technical presentation and historical continuity.

Infrastructure Integrity

The site resolves directly to a single likely origin, with no detected CDN or WAF layer; this provides no meaningful protective separation between the public service and its hosting endpoint. Hosting is provided by HVC-AS - HIVELOCITY, Inc. in the United States, and the observed network is associated with AS29802. These infrastructure facts describe delivery of the site only and should not be treated as evidence of legitimacy.

EVIDENCE

- Hosting infrastructure is served from AS29802 (HVC-AS - HIVELOCITY, Inc., US).
- Infrastructure resolution identifies 1 unique IP, 0 edge IPs, and 1 likely origin IP; no CDN was detected.

Closing Assessment

Account access, credential submission, financial activity, and other sensitive actions should not proceed unless independent identity, authorization, and service validation are completed through trusted external channels.

Written analysis generated 2026-08-20 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

2 findings contributed to this verdict, raised by registration and ownership, analysis engine.

01 Governance Risk

- The registration record withholds contact details for the operator.
Registration and ownership rule:KF_WHOIS_HIDDEN
- Registration details are held behind a privacy service, so no operator is named publicly. This is common and legal, and it also means there is nobody to check.
Registration and ownership rule:KF_WHOIS_PRIVATE

02 Sensitive Interaction Risk

- The analysis matched a pattern TrustSniffer treats as a direct threat to a visitor.

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	25%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of globalcompak.com.

- The request stayed on globalcompak.com. It was not redirected to another domain. CLEAR
- Registration is published under ENOM, INC.. CLEAR
- DNS for this domain is served by zoom.ph, across 3 name servers. NOTED
- The registration is paid up to 2027-07-26. NOTED
- The earliest public archive of this site is from 2013-07-04. CLEAR
- It is hosted on HVC-AS, from a server in US. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about globalcompak.com at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
