

Is gocache.com.br legit? TrustSniffer's high-trust assessment: 95/100

gocache.com.br

Verdict

95

OUT OF 100

HIGH TRUST

gocache.com.br appears legitimate.

Our checks found nothing pointing to fraud. Ordinary care still applies when you pay or sign in.

Not Scam

Safe for Login

Low Risk

Assessed 2026-08-13 by automated analysis. Classification confidence 55%.

What this site appears to be

Corporate homepage for GoCache, a Brazilian CDN and application security platform offering WAF, DDoS protection, bot mitigation, load balancing, observability and log streaming; includes contact/address and partner/customer references.

Evidence status and limitations

Evidence completeness: UNKNOWN

- The real-world operator identity was not independently verified.
- Module-level completeness metadata is unavailable for this legacy report.

Key findings

- Automated classification: Not Scam.
- Domain age: more than 10 years (registration continuity).
- No flags from the reputation services TrustSniffer consulted at assessment time.
- The operator behind the site could not be independently connected to a real-world brand or person.

Full analysis

Overview

GoCache is a Brazilian corporate website presenting an enterprise platform for CDN, application security, performance, and edge-services management. Its apparent business model is subscription-based provision of WAF, DDoS mitigation, bot protection, load balancing, observability, and related professional support to business customers.

Scam/Impersonation Risk

No contradictions were observed across the supplied evidence: there were no phishing, impersonation, malicious-reputation, or confirmed threat indicators. The homepage presents a coherent corporate product offering, identifiable GoCache branding, customer and partner references, and contact information rather than high-pressure financial, cryptocurrency, or consumer-payment content. Runtime telemetry did record non-whitelisted external requests and console errors, but these were page-behavior observations; the same testing found no hidden forms, sensitive external forms, wallet activity, clipboard manipulation, or cloaking. The available evidence therefore supports an apparently legitimate, low-risk website, while independent linkage to the real-world operator remains unverified.

EVIDENCE

- Domain registration: created 2013-07-25; age 13.06 years; expiry 2028-07-25.
- External reputation assessment: 0 malicious detections, 0 suspicious detections, and no phishing or other listed-threat contradiction.
- Homepage behavior: 22 external XHR requests, 13 external POST requests, and 16 console errors; no hidden forms, password-submission forms, wallet activity, or cloaking detected.
- Web traffic footprint: rank 48393, within the top 1,000,000 sites.

Regulatory Verification Notes

The site operates as a corporate infrastructure and security-services provider, not as a website presenting a regulated financial product. Its homepage describes WAF, bot mitigation, DDoS protection, rate limiting, load balancing, CDN, Edge Insights, log streaming, API protection, image optimization, and support services, alongside contact, address, partner, and customer references. No licence or registration number is supplied in the reviewed material; for this business model, that is a transparency and applicability point for commercial due diligence rather than evidence of deception. The presentation is consistent with an established enterprise SaaS provider, but the operator's real-world identity is not independently verified.

EVIDENCE

- Homepage content: “Home - GoCache” presents an enterprise marketing and product site with contact and address information, partner references, customer cases, and professional support.
- Transport security: TLS certificate issued by YE1 at DV validation level, valid to 2026-10-20T13:44:48+00:00.
- Regulatory disclosure: the reviewed material contains no stated licence authority or licence number.

What to Verify Next

Before credential or payment interactions, an enterprise customer should independently confirm the contracting entity, applicable Brazilian commercial or sector requirements, and the authenticity of the intended GoCache contact channel. Procurement should also obtain and review the applicable service terms, data-processing provisions, support commitments, billing entity, and payment-protection arrangements through an independently established business channel.

EVIDENCE

- Identity verification step: independently match the contracting entity named in any proposal, invoice, or agreement against an authoritative Brazilian corporate registry.
- Commercial verification step: reconcile the proposed service, pricing, support obligations, and payment recipient with formal terms and procurement documentation.
- Access-control step: confirm that any login or account-management route is reached through an independently validated corporate channel before credentials are submitted.

Summary Verdict

The overall posture is **high trust and low risk**, with converging domain, reputation, technical, and page-content signals supporting an established, apparently legitimate website. This conclusion does not independently prove the identity of the real-world operator, so the site should be treated as evidence-consistent rather than identity-verified.

Infrastructure Integrity

The site resolves directly to infrastructure operated by 3L CLOUD INTERNET SERVICES LTDA - EPP in Brazil, with no detected CDN edge layer and two likely origin addresses. The absence of a detected CDN is an infrastructure characteristic and does not contradict the site’s legitimacy; it simply means that CDN-based exposure mitigation should not be inferred from the hosting posture alone.

EVIDENCE

- Hosting: served from AS266444, 3L CLOUD INTERNET SERVICES LTDA - EPP, BR; registry LACNIC; country BR.
- Resolution posture: 2 unique IPs, 0 edge IPs, and 2 likely origin IPs; no CDN vendor detected.

Closing Assessment

Normal business evaluation may proceed, subject to ordinary independent merchant-identity, contractual, return or service-policy, and payment-protection checks before credentials or funds are committed.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	50%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of gocache.com.br.

- The request stayed on gocache.com.br. It was not redirected to another domain. CLEAR
- DNS for this domain is served by 255.184, across 5 name servers. NOTED
- The registration is paid up to 2028-07-25. CLEAR
- It is hosted on AS266444, from a server in BR. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about gocache.com.br at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
