

Is google.com legit? TrustSniffer's high-trust assessment: 100/100

google.com

Verdict

100

OUT OF 100

HIGH TRUST

google.com appears legitimate.

Our checks found nothing pointing to fraud. Ordinary care still applies when you pay or sign in.

Not Scam

Safe for Login

Low Risk

Assessed 2026-08-11 by automated analysis. Classification confidence 70%.

What this site appears to be

A Finnish-language Google consent/cookie notice explaining use of cookies and data for service delivery, personalization and advertising, with accept/reject and advanced settings links.

Evidence status and limitations

Evidence completeness: UNKNOWN

- The real-world operator identity was not independently verified.
- Module-level completeness metadata is unavailable for this legacy report.

Key findings

- Automated classification: Not Scam.
- Domain age: more than 10 years (registration continuity).
- Public web-archive history exists since 2003.
- No flags from the reputation services TrustSniffer consulted at assessment time.

Full analysis

Overview

The website is Google's Finnish-language search and online-services experience, presenting a cookie and privacy-consent notice alongside access to search, Gmail, image search, settings, privacy information, and terms of use. Its apparent business model is the provision of online services supported by advertising, cookies, and data-driven personalization.

Scam/Impersonation Risk

No phishing, impersonation, blacklist, or other contradictory signals were observed. The captured homepage is consistent with a Google consent interstitial: it contains standard privacy controls, language selection, and navigation to Google services, while no sensitive form, hidden form, wallet interaction, credential-exfiltration behavior, or cloaking was detected. Two suspicious inline scripts were observed during behavioral testing, but the same testing recorded no external posts or external XHR activity; this is an implementation anomaly rather than evidence of malicious behavior. A top-tier global traffic footprint and clean external reputation further support the conclusion that the site is an established, apparently legitimate service, although the real-world operator identity remains independently unverified.

EVIDENCE

- The homepage is a Finnish-language Google consent and cookie notice with accept, reject, advanced-settings, privacy, and terms controls; no sensitive form was present.
- The domain was registered on 1997-09-15 and is approximately 28.92 years old.
- Historical records contain 16 archive snapshots spanning 2003-09-29 to 2007-07-03, covering 5 tracked years.
- Behavioral testing recorded 2 suspicious inline scripts, but 0 external XHR requests, 0 external POST requests, 0 hidden forms, and 0 wallet-drainer runs.

Regulatory Verification Notes

The observed service is a general search and online-services platform rather than a site presenting a financial product or regulated investment offering. The captured page provides links to privacy and terms materials, but no licensing or registration claim is visible in the supplied content; any regulated use case would therefore require separate confirmation of the applicable legal entity and authorization. A third-party broker record associated with the same domain-level identifier names CV. Bogor Forex Investindo in Indonesia and indicates no regulation, but the match is medium-confidence, based on the effective top-level domain, and does not

establish that the Google service is operated by that broker. This remains a soft reputational signal, not a regulatory or identity conclusion.

EVIDENCE

- The homepage's visible legal navigation includes "Privacy" and "Terms," while the captured consent content contains no license number or regulatory authorization statement.
- The site is served from AS15169, Google LLC, US.
- The transport certificate is issued by WR2, uses DV validation, and is valid to 2026-10-12.
- Domain registration identifies MarkMonitor, Inc. as registrar and Google LLC as the registrant organization.

What to Verify Next

Before credential or payment interactions, an organization should independently confirm that the legal entity named in the site's privacy and terms materials corresponds to the intended Google service and review the applicable privacy and data-use choices. If the service is being evaluated in connection with a financial, advertising, or other regulated arrangement, the relevant authorization should be checked directly with the competent official registry rather than inferred from the website or third-party commentary. Official support and contact channels should also be confirmed through an independently sourced route.

EVIDENCE

- The consent interface exposes privacy, terms, personalization, and cookie-management controls that can be reviewed before proceeding.
- The captured page offers standard accept, reject, and advanced-settings choices rather than requesting payment or credentials.
- The observed business description concerns search, online services, advertising, and data-driven personalization, not a disclosed brokerage or investment offering.

Summary Verdict

Available evidence is consistent with an established, apparently legitimate website and supports a high-trust, low-risk posture. The assessment supports ordinary use of the presented service, while the connection between the website and an independently verified real-world operator identity remains unresolved.

Infrastructure Integrity

The website is protected by CDN/WAF infrastructure, with observed edge servers hosted by Google LLC in the United States on AS15169; the observed edge IPs are 142.251.38.68, 216.58.198.174, 2a00:1450:4026:800::2004, and 2a00:1450:4026:807::200e. This mainstream infrastructure and valid transport encryption mitigate direct exposure and delivery risks, but they are supporting controls rather than proof of operator identity.

Closing Assessment

Routine browsing is proportionate to the assessed posture; before submitting credentials or making any payment, ordinary independent checks of entity identity, applicable terms, and payment protections should be completed.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	50%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of google.com.

- The request stayed on google.com. It was not redirected to another domain. CLEAR
- Registration is published under MarkMonitor, Inc.. CLEAR
- DNS for this domain is served by google.com, across 4 name servers. NOTED
- The registration is paid up to 2028-09-14. CLEAR
- The earliest public archive of this site is from 2003-09-29. CLEAR
- It is hosted on GOOGLE, from a server in US. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about google.com at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
