

Is goud.ma legit? TrustSniffer's high-trust assessment: 95/100

goud.ma

Verdict

95

OUT OF 100

HIGH TRUST

goud.ma appears legitimate.

Our checks found nothing pointing to fraud. Ordinary care still applies when you pay or sign in.

Not Scam

Safe for Login

Low Risk

Assessed 2026-08-11 by automated analysis. Classification confidence 75%.

What this site appears to be

Arabic Moroccan news portal with many headlines and articles across politics, society, sports and culture. Uses a consent management platform listing numerous ad vendors; typical ad-driven publisher model. No login/payment forms or explicit high-risk financial offers detected.

Evidence status and limitations

Evidence completeness: UNKNOWN

- The real-world operator identity was not independently verified.
- Module-level completeness metadata is unavailable for this legacy report.

- Public web-archive history exists since 2011.
- No flags from the reputation services TrustSniffer consulted at assessment time.

Full analysis

Overview

The website is an Arabic-language Moroccan news portal presenting frequent articles and headlines across national affairs, politics, opinion, sports, culture, society, and entertainment. Its apparent business model is that of an ad-supported publisher, using display or native advertising and consent-managed third-party advertising vendors rather than selling financial products or requiring payment for ordinary access.

Scam/Impersonation Risk

No scam, phishing, blacklist, or confirmed impersonation contradiction was observed. The homepage's substantial editorial content, Moroccan news positioning, and broad topic coverage are consistent with a functioning media publication. A similarity signal involving the name "go.com" was not corroborated by the site's content or behavior as an impersonation attempt. Browser testing did show advertising-related external activity, dynamic page changes, and console errors, but it found no hidden forms, password collection, wallet activity, cloaking, or non-whitelisted external submissions; these observations are compatible with an ad-supported publishing environment. The overall evidence therefore supports a low scam or impersonation risk while leaving the real-world operator identity independently unverified.

EVIDENCE

- The homepage identifies the publication as a comprehensive Moroccan electronic newspaper and displays articles under sections covering current affairs, politics, sports, culture, and entertainment.
- The domain registration record shows creation on 2010-12-20 and an age of 15.65 years; the registrar is ARCANES TECHNOLOGIES and the recorded owner is Point Info.
- Historical records contain 5,000 archive snapshots spanning 2011–2015, with 5 years tracked and a maximum gap of 1 year.
- External reputation checks were clean, with no malicious or suspicious detections, no confirmed blacklist result, and no matched broker-reputation entry.

Regulatory Verification Notes

The site appears to operate as a media publisher rather than a regulated financial service. Its navigation exposes privacy, contact, about, team, and archive pages, but the supplied page findings do not establish an independently verified legal operator or a regulatory registration. No license or license number is claimed in the available business-model evidence. This is a transparency and verification matter, not evidence of a scam. The absence of structured metadata and a descriptive meta tag is a presentation deficiency rather than a legal or

identity contradiction. The registration and continuity evidence nevertheless supports an established-site assessment, while operator identity remains unverified.

EVIDENCE

- The site navigation includes “Privacy Policy,” “Contact,” “About,” “Team,” and “Archive” destinations.
- The registration record lists ARCANES TECHNOLOGIES as registrar, with expiration on 2027-12-20.
- The site’s TLS certificate is issued by WE1, uses DV validation, and is valid to 2026-09-20.
- The page analysis classifies the business model as an ad-supported online news publisher and records no claimed license authority or license number.

What to Verify Next

Before any future credential or payment interaction, an institution should independently confirm the publication’s legal operator and official contact channels through a separate, trusted route. Any future account, subscription, donation, or commercial feature should be assessed against a clearly stated privacy policy, terms of service, refund or cancellation process, and appropriate payment-protection controls. If the publication represents itself as subject to a specific media or commercial registration regime, that status should be checked with the relevant official registry.

EVIDENCE

- The homepage contains no login, password, payment, or other sensitive-input form.
- The site presents privacy, contact, about, and team pages that can be used for identity and policy review.
- The observed business model is advertising-supported, with a consent-management platform listing multiple advertising vendors.

Summary Verdict

Available evidence is consistent with an established, apparently legitimate website and supports a high-trust, low-risk posture. No contradictory fraud or impersonation signals were identified, but the real-world operator has not been independently verified, so legitimacy should be understood as evidence-consistent rather than proven.

Infrastructure Integrity

The website is delivered through Cloudflare’s CDN and WAF infrastructure, with observed traffic resolved to Cloudflare edge servers rather than a directly exposed origin. This provides a meaningful protective layer against routine network exposure, although CDN use is a mitigating control and not proof of operator legitimacy.

EVIDENCE

- Hosted on AS13335 (Cloudflare, Inc.; CLOUDFLARENET), with observed edge infrastructure in the United States.
- Six observed IP addresses were CDN edge addresses, with zero likely origin candidates.
- The transport certificate uses DV validation and issuer WE1, with validity through 2026-09-20.

Closing Assessment

Ordinary browsing is proportionate to the assessed posture. For credentials or payments, standard independent identity, policy, and payment-protection checks should be completed before proceeding.

Written analysis generated 2026-08-11 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	50%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of goud.ma.

- The request stayed on goud.ma. It was not redirected to another domain. CLEAR
- Registration is published under ARCANES TECHNOLOGIES. CLEAR
- DNS for this domain is served by cloudflare.com, across 2 name servers. NOTED
- The registration is paid up to 2027-12-20. CLEAR
- The earliest public archive of this site is from 2011-02-15. CLEAR
- It is hosted on CLOUDFLARENET, from a server in US. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about goud.ma at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
