Full analysis

Overview

Graphic Online is a Ghana-focused editorial news website presenting reporting and commentary across politics, business, sports, entertainment, lifestyle, and classifieds, with an apparent business model based on advertising, app distribution, audience engagement, and paid listings.

Scam/Impersonation Risk

No contradictions were observed. The supplied evidence identifies no phishing, impersonation, or malicious-reputation finding, and the homepage presents substantial editorial content rather than a credential-collection or transaction-led experience. Automated browsing did record suspicious inline-script activity and substantial DOM changes, but it also found no login form, hidden form, externally submitted password form, wallet-drainer behavior, clipboard hijacking, or cloaking; in the context of advertising, consent controls, and app promotion, these are non-conclusive implementation signals rather than evidence of impersonation. The overall evidence therefore supports a low scam and impersonation concern.

EVIDENCE

- Homepage: extensive Ghana news coverage is displayed across politics, business, sports, entertainment, lifestyle, and classifieds.
- Homepage interaction analysis: no login form, hidden sensitive form, password-external form, wallet connection, or clipboard-write behavior was detected.
- External reputation assessment: zero malicious and zero suspicious findings were recorded, with no threat-list contradiction identified.

Regulatory Verification Notes

The site operates as a news and media publisher rather than presenting a regulated financial service. The available material does not independently verify the real-world operator identity, although the registration record names Graphic Communications Group Ltd and the site's content and social presence are consistent with an established publishing operation. No regulated-service licence or registration number was identified in the supplied page evidence; for this business model, that is a transparency and applicability point rather than evidence of a scam. Any paid listing or commercial interaction should remain subject to ordinary checks of the relevant counterparty and transaction terms.

EVIDENCE

- Domain registration: registered 2011-01-01 and approximately 15.62 years old; registrar recorded as Ghana Dot Com.
- Hosting telemetry: served from AS13335; provider recorded as CLOUDFLARENET - Cloudflare, Inc., US.
- Transport security: TLS certificate issued by WE1 with DV validation, valid to 2026-10-24T03:07:43+00:00.
- Registration record: expiration recorded as 2025-12-30T05:00:00Z.

What to Verify Next

Before credential or payment interactions, independently confirm the publisher or relevant commercial counterparty through an official corporate source, review the applicable privacy, advertising, classifieds, and returns terms, and ensure that any payment method provides appropriate dispute and recovery protections. If a particular offering is presented as a regulated service, its licence should be checked directly with the relevant regulator rather than inferred from the website's general publishing profile.

EVIDENCE

- Homepage: advertising, consent controls, app promotion, and classifieds indicate several distinct interaction and commercial pathways requiring separate review.
- Site content: the publisher's stated coverage and business presentation should be compared with an independently sourced corporate identity.
- Transactional context: any paid listing or other commercial engagement should be assessed against the counterparty's published terms and available payment protections.

Summary Verdict

Available evidence is consistent with an established, apparently legitimate website and supports a high-trust, low-risk posture. The convergence of substantive editorial content, clean external reputation, long-standing domain continuity, and sound technical signals is persuasive, while the real-world operator identity remains likely rather than independently verified.

Infrastructure Integrity

The site is protected by Cloudflare CDN and WAF infrastructure, with observed addresses belonging to CDN edge servers and no origin candidate identified. This provides a mitigating layer against direct exposure of the hosting environment but is not, by itself, proof of legitimacy.

EVIDENCE

- Infrastructure assessment: 6 observed IP addresses were CDN edge addresses, with 0 likely origin IP addresses.
- Observed edge addresses: 104.26.8.156, 104.26.9.156, 172.67.71.187, and 2606:4700:20::681a:89c were associated with the Cloudflare edge.

Closing Assessment

Routine browsing is proportionate to the available risk posture; before submitting credentials or making payments, ordinary independent checks of merchant identity, applicable terms, and payment-protection options should be completed.

Written analysis generated 2026-08-13 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	LIKELY
Identity score	76/100
Identity verification confidence	76%

- Trusted social count=2

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of graphic.com.gh.

- The request stayed on graphic.com.gh. It was not redirected to another domain. CLEAR
- Registration is published under Ghana Dot Com. CLEAR
- DNS for this domain is served by cloudflare.com, across 2 name servers. NOTED
- The registration is paid up to 2025-12-30. NOTED
- It is hosted on CLOUDFLARENET, from a server in US. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about [graphic.com.gh](#) at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
