What happymail.co.jp served when TrustSniffer captured it on 2026-08-17. The page may look different now.

Key findings

- Automated classification: Not Scam.
- Domain age: more than 10 years (registration continuity).
- No flags from the reputation services TrustSniffer consulted at assessment time.
- The operator behind the site could not be independently connected to a real-world brand or person.

Full analysis

Overview

This website presents itself as the official Japanese Happymail matchmaking and dating service, offering visitors a platform to seek romantic partners, marriage prospects, friends, or other social connections through registration, login, support, and relationship-success content.

Scam/Impersonation Risk

No contradictions were observed across the supplied evidence: there was no phishing, impersonation, confirmed blacklist, or malicious-reputation finding. The site's registration and login functions are consistent with its stated matchmaking purpose, and behavioral testing found no hidden forms, external password submissions, wallet activity, clipboard manipulation, or cloaking. Some external network activity, post-interaction page changes, and browser-console errors were recorded, but these are technical behavior and quality signals rather than evidence of impersonation or fraud in this context.

EVIDENCE

- The homepage and registration flow describe a Japanese dating and matchmaking service, with no page-level red flags or suspected brand impersonation.
- External reputation checks recorded 0 malicious detections, 0 suspicious detections, and a global traffic rank of 8616.
- The domain registration record shows creation on 2011-02-09 and an age of 15.53 years.
- Behavioral testing completed 2 successful runs and recorded 30 external XHR requests, 17 external POST requests, 0 hidden forms, and 0 wallet-drainer runs.

Regulatory Verification Notes

The site appears established and professionally presented, with dedicated help, pricing, legal-information, and service-description content. Its business model is a dating marketplace with free registration, paid premium functions, point-based purchases, and affiliate referrals; this is a commercial interaction model that warrants ordinary consumer and payment checks, but the supplied evidence identifies no scam contradiction. The site displays regulatory notices associated with an internet dating business, although the supplied content does not independently verify a licensing or registration authority and number. A separate broker-reputation dataset produced no match; this is contextual reputation information, not a legal or regulatory determination.

EVIDENCE

- The homepage and legal-information content identify the service as an internet dating and matchmaking operation and state that users under 18 or still in high school may not use it.
- The site's pricing and support pages describe paid points or premium features and related account assistance.
- Hosting telemetry identifies AS4713, OCN - NTT DOCOMO BUSINESS, Inc., JP.
- The site's TLS certificate is OV-validated, issued by DigiCert Global G2 TLS RSA SHA256 2020 CA1, with validity through 2026-10-16T23:59:59+00:00.

What to Verify Next

Before credential or payment interactions, an independent check should confirm that the business identity shown in the site's legal materials corresponds to the relevant Japanese internet-dating business notification or registry. The service's terms, cancellation and refund provisions, point-purchase conditions, and privacy practices should also be reviewed, and official support channels should be confirmed through an independently obtained route rather than relying solely on links presented during registration.

EVIDENCE

- The site provides dedicated legal-information, help, pricing, registration, and login areas that can be compared for consistent business details.
- The homepage presents an official-service claim and directs visitors toward both web and application use, making an independent application-store or offline contact-channel comparison appropriate.
- The commercial pages establish that account and payment terms are relevant to any prospective engagement.

Summary Verdict

Available evidence is consistent with an established, apparently legitimate website and supports a high-trust, low-risk posture. The operator’s real-world identity is not independently verified, so legitimacy should be understood as evidence-consistent rather than proven.

Infrastructure Integrity

Confirmed hosting telemetry places the site on OCN - NTT DOCOMO BUSINESS,Inc. infrastructure in Japan under AS4713. The supplied infrastructure facts do not confirm a trusted CDN or WAF layer; this is a limited protective-infrastructure observation and does not create an identity or fraud contradiction.

Closing Assessment

Ordinary browsing and service evaluation are proportionate, while independent business-identity, consumer-protection, and payment-protection checks should be completed before credentials or funds are committed.

Written analysis generated 2026-08-17 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	50%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of happymail.co.jp.

- The request stayed on happymail.co.jp. It was not redirected to another domain. CLEAR
- DNS for this domain is served by co.jp, across 2 name servers. NOTED
- It is hosted on OCN, from a server in JP. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about happymail.co.jp at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
