- Public web-archive history exists since 2008.
- No flags from the reputation services TrustSniffer consulted at assessment time.

Full analysis

Overview

This website is a direct-booking hospitality site for serviced apartments and hotel accommodation in North Bangalore, presenting room features, amenities, offers, reservation options, contact details, and stay policies for transit, business, leisure, and extended-stay visitors near Kempegowda International Airport.

Scam/Impersonation Risk

No contradictions were observed: the available evidence shows no phishing, impersonation, or malicious-reputation finding, and the site's content is consistent with an operating hospitality business rather than a deceptive financial or credential-harvesting service. The homepage identifies Hoppers Stop Apartment Hotels and Hop Inn Service Apartment Hotel, describes accommodation, meals, amenities, and airport access, and provides conventional booking and contact functions. A behavioral review did record two suspicious inline scripts and some external network activity, but no hidden forms, password-exfiltration forms, wallet activity, cloaking, or

other high-risk interaction was identified; these observations therefore remain limited technical anomalies rather than evidence of impersonation.

EVIDENCE

- The homepage describes Hoppers Stop Apartment Hotels and Hop Inn Service Apartment Hotel as accommodation properties serving North Bangalore travelers.
- The domain was registered on 2008-10-13 and is approximately 17.86 years old.
- Historical records show 169 archive snapshots spanning 2008–2025, with 18 years tracked.
- The behavioral review recorded 2 suspicious inline scripts, while hidden forms, password-external forms, wallet-drainer activity, and cloaking were all recorded as absent.

Regulatory Verification Notes

The site provides Terms & Conditions, Privacy Policy, Refund Policy, and FAQ pages, alongside property addresses, telephone numbers, and reservation contact details. This is appropriate disclosure for a hospitality booking operation, although the pages do not present a licensing authority or registration number; that is a transparency item for ordinary merchant verification, not evidence of a scam. The real-world operator identity remains independently unverified, so the site should be described as apparently legitimate and evidence-consistent with an established hospitality business rather than as identity-proven. Registration through PDR Ltd. d/b/a PublicDomainRegistry.com and the long registration history provide supporting continuity signals. No matched third-party broker-reputation record was identified.

EVIDENCE

- The site's legal and policy navigation includes Terms & Conditions, Privacy Policy, Refund Policy, and FAQ pages.
- The registration record lists PDR Ltd. d/b/a PublicDomainRegistry.com as registrar and records the domain expiration date as 2026-10-13.
- The site's transport encryption uses a DV certificate issued by YR1, valid through 2026-11-04.
- The resolved hosting service is AS31898, ORACLE-BMC-31898 - Oracle Corporation, US.

What to Verify Next

Before credential or payment interactions, independently confirm that the advertised property addresses and reservation telephone numbers correspond to the intended accommodation business. The booking transaction should be checked for the final merchant name, cancellation and refund terms, total charges, and payment-protection options. Where local requirements apply, licensing or accommodation registration should be confirmed through the relevant official registry, and official contact channels should be validated through an independent offline route.

EVIDENCE

- The homepage provides a “Book Now” route for the advertised accommodation.
- The site includes a dedicated Refund Policy page that can be compared with the terms presented during booking.
- The page capture identified no login form, hidden sensitive form, or password form.

Summary Verdict

The overall posture is **high trust and low risk**, with converging evidence consistent with an established, apparently legitimate hospitality website. No scam or impersonation contradiction was identified, but the operator’s real-world identity is not independently verified, so legitimacy should remain qualified rather than treated as proven.

Infrastructure Integrity

The site resolves to a single likely origin address without a detected CDN or WAF layer. This provides a straightforward hosting posture but less edge-level shielding than a CDN-backed deployment; infrastructure remains a mitigating technical context, not proof of legitimacy.

Closing Assessment

Normal browsing and ordinary reservation consideration are proportionate, subject to independent confirmation of the merchant identity, booking terms, and payment protections before credentials or funds are submitted.

Written analysis generated 2026-08-20 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	25%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of [hoppersstop.com](#).

- The request stayed on [hoppersstop.com](#). It was not redirected to another domain. CLEAR
- Registration is published under PDR Ltd. d/b/a PublicDomainRegistry.com. CLEAR
- DNS for this domain is served by [orderbox-dns.com](#), across 4 name servers. NOTED
- The registration is paid up to 2026-10-13. NOTED
- The earliest public archive of this site is from 2008-03-08. CLEAR

- It is hosted on ORACLE-BMC-31898, from a server in US. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about [hoppersstop.com](#) at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
