

Is host-it.co.uk safe? TrustSniffer's moderate-trust assessment: 65/100

host-it.co.uk

Verdict

65

OUT OF 100

MODERATE TRUST

host-it.co.uk is moderately trusted.

Most signals looked ordinary, and some evidence was missing. Read the checks below before you pay or hand over personal details.

Safe for Read-Only

Assessed 2026-08-17 by automated analysis. Classification confidence 65%.

What this site appears to be

Host-IT corporate site describing data centre locations, colocation and hosting services, contact details and cookie/consent information. Includes partner/testimonial content and links to portal/webmail.

Evidence status and limitations

- Evidence completeness: UNKNOWN
- The real-world operator identity was not independently verified.
 - Module-level completeness metadata is unavailable for this legacy report.

Key findings

- Automated classification: Safe for Read-Only.
- No flags from the reputation services TrustSniffer consulted at assessment time.

Full analysis

Overview

This website is a corporate hosting provider presenting data-centre locations, colocation services, dedicated servers, VPS and cloud hosting, managed services, support resources, contact details, and links to customer portal and webmail functions. Its apparent business model is the sale of hosting capacity and related service or support contracts to business customers.

Scam/Impersonation Risk

No phishing, impersonation, blacklist, or conflicting-identity indicators were observed. The homepage presents a coherent corporate hosting proposition rather than financial promotions, cryptocurrency services, unusually high-return claims, or deceptive login mechanics. Contact and service information, partner or testimonial content, and links to professional social platforms are consistent with the stated business model. The automated browser-level flags corresponded to cookie consent and third-party tracking activity; subsequent review found no hidden forms, external password forms, wallet activity, cloaking, clipboard manipulation, or suspicious scripts. Overall, the available evidence supports a low apparent scam or impersonation risk, while the real-world operator identity remains likely rather than independently verified.

EVIDENCE

- The homepage describes colocation, lockable rack services, dedicated servers, cloud hosting, and support rather than presenting a high-risk financial or investment offer.
- Behavioural review recorded no hidden forms, password submissions to external destinations, wallet connections, wallet-drainer activity, cloaking, or suspicious inline scripts.
- External reputation checks recorded zero malicious and zero suspicious detections, with no confirmed blacklist or phishing result.

Regulatory Verification Notes

The site appears to operate as a conventional infrastructure and hosting business, for which the relevant diligence focus is the contracting entity, service terms, support commitments, and data-handling responsibilities rather than financial-services authorization. No specific license or registration number is presented in the supplied business description, so regulated status should not be inferred from the website alone. The site does provide cookie and consent information and identifies technology and social-platform integrations, which supports basic disclosure transparency. Available evidence is consistent with an established corporate website, but identity verification is not conclusive; the absence of a broker-dataset match is contextual and is not a legal or licensing determination.

EVIDENCE

- The homepage identifies data-centre, colocation, dedicated-server, VPS/cloud-hosting, managed-service, and support offerings.
- Hosting telemetry shows service through AS13335, CLOUDFLARENET — Cloudflare, Inc., US.
- Transport security telemetry shows a DV TLS certificate issued by WE1, valid to 2026-09-19T18:18:47+00:00.
- The homepage displays cookie-consent information and links to portal or webmail resources, LinkedIn, and Vimeo.

What to Verify Next

Before a material hosting commitment, the prospective customer should confirm the contracting legal entity, service address, support escalation route, service-level commitments, cancellation and refund provisions, and applicable data-processing terms using information independent of the website. Any claim that a particular service is subject to sector-specific authorization should be checked directly against the relevant official registry. Contact channels should also be confirmed through an independently sourced route before sensitive account or billing changes are made.

EVIDENCE

- The supplied business description identifies service contracts and support contracts but does not establish the contracting entity or any regulated authorization.
- The site links to customer-facing portal and webmail functions, making independent confirmation of account-support channels a relevant control.
- The website uses consent and analytics integrations, making review of privacy and data-processing terms relevant to a business hosting engagement.

Summary Verdict

The website has a moderate-trust posture and presents as a coherent, apparently legitimate corporate hosting operation. No active threat or identity-contradiction signals were observed, but the available evidence does not independently prove the real-world operator identity or support unrestricted confidence for high-value commitments.

Infrastructure Integrity

The site is protected by a Cloudflare CDN/WAF, and all observed addresses were CDN edge infrastructure rather than a directly exposed origin. This provides a meaningful mitigation against direct origin exposure and common delivery-layer abuse, but protective infrastructure alone does not establish business legitimacy.

Closing Assessment

Routine informational browsing is proportionate; sensitive account changes and significant commercial commitments should proceed only after the contracting party, service obligations, and official communication channels have been independently confirmed.

Written analysis generated 2026-08-17 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	LIKELY
Identity score	73/100
Identity verification confidence	74%

- Trusted social count=1

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of host-it.co.uk.

- The request stayed on host-it.co.uk. It was not redirected to another domain. CLEAR
- It is hosted on CLOUDFLARENET, from a server in US. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about host-it.co.uk at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
