Key findings

- Automated classification: Not Scam.
- Domain age: more than 10 years (registration continuity).
- Public web-archive history exists since 1996.
- No flags from the reputation services TrustSniffer consulted at assessment time.

Full analysis

Overview

hosting.com is an established web-hosting and domain-services platform whose Nigerian-focused article presents hosting services, website-speed benefits, customer-support features, and related infrastructure offerings intended to attract and support commercial customers.

Scam/Impersonation Risk

No contradictions were observed. The article has a clear informational and commercial purpose, with no detected phishing, impersonation, malicious behavior, or deceptive financial activity. Its broader reputation is clean, and the domain has a substantial, continuous public history consistent with an established service.

- The article page is classified as an informational hosting-services article with no page-level red flags.
- The page contains no login form, sensitive form, hidden form, wallet-connect behavior, or clipboard-hijacking activity.
- External reputation checks recorded zero malicious and zero suspicious detections, with no blacklist match.
- The domain was registered in 1996 (~30.5 years old); archival records contain 5,000 snapshots spanning 1996–2026 (31 years tracked).

Regulatory Verification Notes

The site's commercial model is clear, but the supplied page evidence does not establish a specific regulatory license or license number. This is a limited disclosure point rather than an indication of deception. Registration records identify Cloudflare, Inc. as registrar and list Hosting Holding Germany BidCo GmbH and Thomas Greer in the associated ownership fields.

- The site's business-model record identifies paid web hosting, domain, and related infrastructure services.
- The site does not claim a specific license or provide a license number in the supplied analysis.
- The domain is served through AS13335 (Cloudflare, Inc.).
- TLS is issued by WE1 at DV validation level and is valid to 2026-10-23.

What to Verify Next

For enterprise procurement, confirm the contracting entity, applicable commercial registrations, and governing service terms through the official legal materials. Independently confirm support and billing channels using contact details published on the site and established corporate profiles before executing a material business commitment.

- The article page links to established social platforms including LinkedIn, YouTube, TikTok, and Vimeo.
- The site presents payment-processing and live-chat functionality as part of its customer-service environment.

Summary Verdict

hosting.com presents a legitimate, established, high-trust posture with strong convergence across identity, historical continuity, reputation, content quality, and technical stability. Normal interaction, including account login and standard use, is appropriate.

Infrastructure Integrity

The site uses Cloudflare CDN/WAF protection and resolves through Cloudflare edge infrastructure, while some potential origin candidates were also observed. This protective architecture mitigates direct exposure of the hosting environment but is treated as a supporting control rather than proof of legitimacy.

Closing Assessment

Standard browsing, account access, and ordinary service use are appropriate, with routine procurement checks proportionate to the value and contractual significance of any engagement.

Written analysis generated 2026-08-02 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	LIKELY
Identity score	76/100
Identity verification confidence	76%

- Trusted social count=2

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of hosting.com.

About this assessment

A trust score summarises the evidence TrustSniffer could collect about hosting.com at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
