

Is hoteljune2026.blogspot.com a scam? TrustSniffer's high-risk assessment: 5/100

hoteljune2026.blogspot.com

Verdict

hoteljune2026.blogspot.com shows high-risk / scam indicators.

This assessment found strong scam indicators. Do not pay, sign in, or share personal details with this site.

Sensitive Interaction Risk

Assessed 2026-09-22 by automated analysis. Classification confidence 55%.

What this site appears to be

A minimal Blogger-hosted personal site with no posts. Finnish cookie/analytics notice referencing Google is present. No forms or monetization mechanisms detected.

Evidence status and limitations

- Evidence completeness: **UNKNOWN**
- The real-world operator identity was not independently verified.
 - Module-level completeness metadata is unavailable for this legacy report.

At a glance

The page as captured

<https://hoteljune2026.blogspot.com/>

What hoteljune2026.blogspot.com served when TrustSniffer captured it on 2026-09-22. The page may look different now.

Key findings

- Automated classification: Sensitive Interaction Risk.
- Domain age: less than 1 year (registration continuity).
- At least one reputation service TrustSniffer consulted had flagged this domain at assessment time.
- The operator behind the site could not be independently connected to a real-world brand or person.

Full analysis

Security Alert

Fortinet, Kaspersky, Sophos flagged this site in external intelligence checks, indicating elevated compromise/scam exposure that requires immediate caution.

This is a minimal Blogger-hosted personal blog titled “#hoteljune2026,” presenting an empty post area, search functionality, Blogger attribution, and a Finnish Google cookie and analytics notice; its apparent purpose is personal publishing rather than commerce, finance, or credential collection.

Scam/Impersonation Risk

The site itself contains no posts, forms, login mechanism, wallet connection, monetization feature, or overt financial solicitation, and observed browser activity did not show external submissions or credential handling. Those benign page characteristics do not offset the decisive external contradiction: the domain is subject to confirmed blacklist findings, with multiple threat detections reporting malicious or suspicious activity. No separate identity contradiction or confirmed brand impersonation was identified, but the combination of the blacklist status and malicious detections creates a critical risk for sensitive interaction. A small number of abuse reports associated with shared Google infrastructure is discounted because the reports apply to a shared provider IP rather than being attributable specifically to this site.

EVIDENCE

- The homepage is an empty Blogger page with no posts, forms, login fields, or financial functionality.
- External reputation checks recorded 14 malicious and 2 suspicious detections, with confirmed blacklist findings from two sources.
- The domain is approximately 0.20 years old, or about 72 days, based on the available registration-continuity evidence.
- The shared-infrastructure abuse reports concern 3 reports against a Google-associated content-delivery IP and are explicitly attributed to shared infrastructure.

Regulatory Verification Notes

The available page presents the site as a personal blog and does not provide an identifiable operator, legal entity, licensing information, or registration details. Because the site does not present a regulated financial or commercial service, this is primarily a transparency and identity-verification gap rather than proof of unlawful activity; nevertheless, the operator cannot be independently connected to a real-world entity from the supplied site content. The transport and hosting signals are technically ordinary but do not establish legitimacy or regulatory status.

EVIDENCE

- The homepage identifies Blogger as the publishing platform and contains no operator, company, license, or registration disclosure.
- The site is hosted on AS15169, Google LLC, United States.
- The transport certificate is Domain Validated, issued by WE2, and valid until 2026-12-03.
- The page contains a Finnish Google cookie and analytics notice describing the sharing of IP-address and user-agent information with Google.

What to Verify Next

Security teams should treat the domain as unsuitable for credential, financial, or other sensitive interaction unless the reason for the external detections is independently resolved. Any claimed affiliation or intended purpose should be confirmed through an independently sourced contact route rather than through the site alone. If the site later introduces downloads, forms, account prompts, or payment requests, those changes should undergo a fresh security review before interaction.

EVIDENCE

- The homepage currently offers no legitimate on-site mechanism for independently validating an operator or business relationship.
- Browser testing recorded zero wallet-connection runs, zero sensitive-wallet runs, zero hidden forms, and zero external POST requests.
- The page's current content is limited to an empty blog presentation and a cookie notice, so any later expansion of functionality would materially change the assessment basis.

Summary Verdict

The overall posture is critical and unsuitable for sensitive interaction. Although the visible page is technically simple and lacks overt scam mechanics, the confirmed external threat and blacklist findings take precedence over those benign presentation characteristics, while the operator’s real-world identity remains unverified.

Infrastructure Integrity

The site is delivered through Google infrastructure with CDN/WAF protection, including observed Google edge servers and potential origin candidates. This provides a mitigating layer against direct network exposure, but protective hosting infrastructure is shared and cannot validate the site’s ownership or legitimacy.

Closing Assessment

The appropriate enterprise disposition is to block or isolate sensitive interaction with the domain pending independent resolution of the threat findings and confirmation of the responsible operator.

Written analysis generated 2026-09-22 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

1 finding contributed to this verdict, raised by analysis engine, behaviour in a sandbox.

01 Sensitive Interaction Risk

- The analysis matched a pattern TrustSniffer treats as a direct threat to a visitor.
Analysis engine signal:direct_threat
- A large share of what the page loaded came from other domains.
Behaviour in a sandbox rule:BEHAV_EXTERNAL_RATIO_MODERATE

Signals weighed against the site

- AbuseIPDB: 3 reports on hosting IP 2a00:1450:4010:c08::84 (EU metro frontend, Content Delivery Network), 0% confidence. The reports are attributed to shared infrastructure, not specifically to this website.

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	50%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of hoteljune2026.blogspot.com.

- The request stayed on hoteljune2026.blogspot.com. It was not redirected to another domain. CLEAR
- It is hosted on GOOGLE, from a server in US. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about hoteljune2026.blogspot.com at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
