Key findings

- Automated classification: Not Scam.
- Domain age: more than 10 years (registration continuity).
- Public web-archive history exists since 2012.
- No flags from the reputation services TrustSniffer consulted at assessment time.

Full analysis

Overview

HuffPost Italia is an established news and media portal presenting editorial coverage across politics, economics, international affairs, culture, opinion, and related topics, with an advertising-supported publishing model and optional paid access.

Scam/Impersonation Risk

No phishing, impersonation, blacklist, malicious-reputation, or conflicting-identity indicators were observed. The homepage's editorial structure, consistent HuffPost Italia branding, and sustained historical continuity are consistent with a genuine news publication rather than a repurposed or deceptive site. Browser telemetry did record suspicious inline scripts and substantial third-party activity, but the same analysis found no hidden forms, password-exfiltration forms, wallet behavior, cloaking, or other account-abuse mechanisms; in this publishing context, those observations are better treated as implementation and advertising-related signals than as evidence of impersonation.

EVIDENCE

- The homepage is identified as "HuffPost Italia" and contains structured sections for politics, economy, international news, culture, health, technology, and opinion, with no brand-impersonation indicators.
- The domain was registered on 2011-04-21 and is approximately 15.32 years old; registration is through Gandi SAS.
- Historical records contain 5,000 snapshots spanning 2012-09-25 to 2017-06-17, covering 6 tracked years, with continuity in the blog/news category.
- External reputation checks recorded 0 malicious and 0 suspicious detections, with no blacklist or phishing result.

Regulatory Verification Notes

The site publishes a concrete corporate attribution in its footer: GEDI Digital S.r.l., Via Ernesto Lugaro 15, 10126 Torino, together with an Italian Partita IVA identifier. This supports apparent corporate disclosure, although the real-world operator has not been independently verified. The reviewed content does not present a financial-services license, which is a transparency point to clarify only if a proposed interaction extends beyond ordinary media access; it is not evidence of a scam. The available third-party context contains no broker-data match, and the overall reputation and infrastructure evidence remain consistent with an established publisher.

EVIDENCE

- The homepage footer identifies “GEDI Digital S.r.l.”, gives a Turin business address, and displays Partita IVA 06979891006.
- The site is served from AS16509, Amazon.com, Inc. (Amazon-02), US.
- The transport certificate is issued by YE1 at DV validation level and is valid to 2026-11-02.

What to Verify Next

Before credential or payment interactions, an independent party should confirm that the published GEDI Digital S.r.l. details correspond to the intended operator, review the applicable subscription, cancellation, and refund terms, and confirm payment-protection arrangements. Official contact routes should also be validated through an independent route rather than relying solely on information presented within a transaction flow.

EVIDENCE

- The site navigation provides “Chi siamo” and “Contatti e segnalazioni” routes that can be used as reference points for independent corporate and contact verification.
- The homepage presents “Abbonati” and “Accedi” pathways, making subscription conditions and credential-handling practices the relevant pre-interaction checks.

Summary Verdict

Available evidence is consistent with an established, apparently legitimate website and supports a high-trust, low-risk posture. The site presents no observed contradiction associated with scam or impersonation activity, but the operator’s real-world identity remains independently unverified.

Infrastructure Integrity

The website is protected by AWS CDN/WAF infrastructure, with observed addresses functioning as CDN edge servers and no origin candidate identified in the infrastructure assessment. This reduces direct exposure of the hosting origin and is a mitigating security characteristic, but it does not independently establish operator legitimacy.

Closing Assessment

Ordinary editorial browsing is proportionate to the observed posture; before submitting credentials or making payments, independent confirmation of the operator, commercial terms, and payment protections should be completed.

Written analysis generated 2026-08-11 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	UNVERIFIED
Identity score	30/100

Identity verification confidence	50%
No on-site identity signals detected	
Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

About this assessment

A trust score summarises the evidence TrustSniffer could collect about huffingtonpost.it at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that

evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
