

Is i22sy.com a scam? TrustSniffer's high-risk assessment: 0/100

i22sy.com

Verdict

0

OUT OF 100

CRITICAL RISK

i22sy.com shows high-risk / scam indicators.

This assessment found strong scam indicators. Do not pay, sign in, or share personal details with this site.

Sensitive Interaction Risk

Governance Risk

Assessed 2026-08-19 by automated analysis. Classification confidence 55%.

Domain age	3.7 years old Registered history	CLEAR
Web archive	Archived since 2024 Public history exists	CLEAR
Certificate	Encrypted connection Issued by WE1	NOTED

The page as captured

<https://i22sy.com/>

What i22sy.com served when TrustSniffer captured it on 2026-08-19. The page may look different now.

Key findings

- Automated classification: Sensitive Interaction Risk.
- Domain age: 3 to 10 years (registration continuity).
- Public web-archive history exists since 2024.
- At least one reputation service TrustSniffer consulted had flagged this domain at assessment time.

Full analysis

Security Alert

Fortinet, Kaspersky, Sophos flagged this site in external intelligence checks, indicating elevated compromise/scam exposure that requires immediate caution.

The website at i22sy.com is an online domain whose supplied site material does not establish a product, service, corporate operator, or operating purpose. Its apparent business model therefore cannot be established from the available evidence.

Scam/Impersonation Risk

The site presents a **critical sensitive-interaction risk** because external security intelligence records confirmed malicious detections and blacklist status. This is a reputation-based contradiction rather than a documented conflict between legal identities, and no separate identity inconsistency or impersonation finding is recorded. Observed behavior also included non-whitelisted external requests, substantial page mutation after interaction, and a password form, which increase concern around credential or other sensitive interactions. The combination of confirmed blacklist findings and suspicious runtime behavior outweighs the otherwise ordinary presence of transport encryption and identifiable hosting infrastructure.

EVIDENCE

- The assessed domain was flagged as malicious by 17 evaluated detections, with Fortinet, Kaspersky, and Sophos among the reporting security providers.
- The domain was recorded on external blacklists; the corresponding protective control was activated because malicious detections exceeded the defined threshold.
- Observed page behavior included 9 external XHR requests, 9 external POST requests, 7 non-whitelisted external network events, and a maximum post-interaction DOM difference of 2,886.
- Archive records show first observation on 2024-01-14 and last observation on 2026-03-07, with 3 years tracked and 0 snapshots recorded.

Regulatory Verification Notes

The real-world operator is not independently verified, and the supplied site material does not establish licensing, registration, or a responsible legal entity. That is a regulatory and disclosure gap requiring independent confirmation, not by itself proof of fraud. Domain registration is through Wild West Domains, LLC, with private registration details associated with Domains By Proxy, LLC; this is an administrative privacy arrangement, but it does not identify the operating entity. A valid certificate and multi-year domain registration provide limited technical continuity signals, but they do not offset the confirmed external threat findings. No broker match was identified in the supplied third-party reputational context.

EVIDENCE

- The domain was registered on 2022-11-23 at 11:43:17 UTC and has an indicated age of 3.74 years; the recorded expiry is 2026-11-23 at 11:43:17 UTC.
- Registration is recorded with Wild West Domains, LLC; the registrant fields show Registration Private and Domains By Proxy, LLC.
- The site uses a DV TLS certificate issued by WE1, valid through 2026-10-25 12:00:42 UTC.
- The supplied site material does not establish a licensing number, registration number, or named responsible legal entity.

What to Verify Next

Independent checks should precede any sensitive interaction. The claimed operator, licensing position, and business authorization should be matched against the relevant official registry using independently obtained contact details rather than information supplied solely by the domain. Any already-exposed credentials should be treated as potentially compromised and reviewed for reuse elsewhere; financial activity should be monitored through the relevant payment or banking provider. The domain's confirmed external threat status should also be escalated through the organization's security-intake or blocking process.

EVIDENCE

- Identity verification remains unknown, so the operator cannot presently be connected independently to a confirmed real-world entity.
- The site's regulatory and corporate disclosure position is unclear from the supplied material.
- Confirmed blacklist and malicious-detection findings require validation through the institution's own security and fraud-review procedures.
- The site's observed behavior included one password form and non-whitelisted external traffic.

Summary Verdict

The website has a critical trust posture and should be treated as unsuitable for sensitive interaction absent successful independent validation and security review. The available evidence does not support confidence in the site's operator, legitimacy, or handling of credentials and financial activity.

Infrastructure Integrity

The site is protected by Cloudflare CDN/WAF infrastructure, and all observed addresses were CDN edge servers rather than an independently visible origin. This provides a meaningful exposure-mitigation layer, but it is not evidence that the underlying website or operator is legitimate.

EVIDENCE

- Served from AS13335, CLOUDFLARENET — Cloudflare, Inc., US.
- Observed edge IPs were 104.21.68.151 and 172.67.196.82; 2 edge IPs were identified and 0 likely origin IPs were observed.
- Cloudflare CDN/WAF protection was detected, with infrastructure trust normalized as 1.

Closing Assessment

Until the operator, authorization, and security status are independently confirmed, organizational controls should prevent credential submission, account access, financial transactions, and other sensitive engagement with the site.

Written analysis generated 2026-08-19 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

2 findings contributed to this verdict, raised by registration and ownership, analysis engine, behaviour in a sandbox, external reputation.

01 Governance Risk

- Registration details are held behind a privacy service, so no operator is named publicly. This is common and legal, and it also means there is nobody to check.

Registration and ownership rule:KF_WHOIS_PRIVATE

- The registration record withholds contact details for the operator.

Registration and ownership rule:KF_WHOIS_HIDDEN

02 Sensitive Interaction Risk

- The analysis matched a pattern TrustSniffer treats as a direct threat to a visitor.
Analysis engine signal:direct_threat
- The structure of the page changed sharply while it was loading.
Behaviour in a sandbox rule:BEHAV_DOM_DENSITY_SPIKE
- The page made background requests to destinations TrustSniffer does not recognise.
Behaviour in a sandbox rule:BEHAV_NONWHITELISTED_XHR
- The page sent data to a destination TrustSniffer does not recognise.
Behaviour in a sandbox rule:BEHAV_NONWHITELISTED_POSTS
- The page exchanged network traffic with destinations TrustSniffer does not recognise.
Behaviour in a sandbox rule:BEHAV_NONWHITELISTED_TRAFFIC
- Most of what the page loaded came from other domains rather than from this one.
Behaviour in a sandbox rule:BEHAV_EXTERNAL_RATIO_HIGH
- The page rewrote itself after it was interacted with, so what a visitor first sees is not what they end up on.
Behaviour in a sandbox rule:BEHAV_DOM_DIFF_AFTER_INTERACTION
- An external threat feed lists this domain: either Google Safe Browsing marked it malicious, or a significant number of malware engines flagged it.
External reputation rule:EXT_BLACKLIST_CRITICAL

Identity verification

Status	UNKNOWN
Identity score	50/100
Identity verification confidence	15%

- AI page analysis unavailable (page captured; identity not AI-verified)

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of i22sy.com.

- The request stayed on i22sy.com. It was not redirected to another domain. CLEAR
- Registration is published under Wild West Domains, LLC. CLEAR
- DNS for this domain is served by cloudflare.com, across 2 name servers. NOTED
- The registration is paid up to 2026-11-23. NOTED
- The earliest public archive of this site is from 2024-01-14. CLEAR
- It is hosted on CLOUDFLARENET, from a server in US. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about i22sy.com at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
