Key findings

- Automated classification: Not Scam.
- Domain age: more than 10 years (registration continuity).
- No flags from the reputation services TrustSniffer consulted at assessment time.
- The operator behind the site could not be independently connected to a real-world brand or person.

Full analysis

Overview

iheartmedia.com is the corporate website of iHeartMedia, presenting advertising solutions, radio stations, podcasts, events, investor information, careers, and related audio and media services for advertisers, listeners, partners, and prospective employees.

Scam/Impersonation Risk

No contradictions were observed. The homepage presents a coherent corporate-media model centered on advertising inventory, radio and podcast publishing, events, and audience analytics, with no observed phishing, impersonation, malicious-content, or credential-harvesting indicators. The site's claims—such as being “America's Most Listened to Audio Provider,” reaching “9 out of 10 Americans,” and operating as the “#1 audio company” in the United States—are prominent marketing assertions with cited audience sources, rather than indicators of fraudulent activity. Available external reputation checks recorded no malicious or suspicious detections, and no broker-related match was identified.

EVIDENCE

- The homepage identifies “iHeartMedia, Inc.” and provides links for advertising, radio stations, podcasts, events, investors, community engagement, and careers.
- The homepage contains one cookie-consent form and no login, password, payment, or other sensitive-data form.
- External reputation results recorded 0 malicious detections, 0 suspicious detections, and no blacklist or phishing hit.
- The domain was registered on 2005-03-13 and is 21.42 years old.

Regulatory Verification Notes

The available material is consistent with an established media and advertising company rather than a financial, brokerage, or other third-party regulated service. The site includes privacy and legal links and investor-facing content, but the real-world operator identity is not independently verified by the supplied evidence; the on-page disclosure position therefore remains qualified rather than conclusive. No licensing claim or license number was identified, although the site's stated business model does not itself establish that a financial-services license should apply. Any regulatory conclusion should consequently be limited to the specific service being considered.

EVIDENCE

- The site's transport encryption uses a DV certificate issued by GeoTrust TLS RSA CA G1, valid through 2026-12-10T23:59:59+00:00.
- The site is served through AS8075, identified as Microsoft Corporation, US.
- The homepage includes privacy/legal navigation and investor information alongside its media-service content.

What to Verify Next

Before credential or payment interactions, independently confirm that the intended counterparty is iHeartMedia, Inc. through a separately sourced corporate record and confirm the applicable privacy, commercial, return/refund, and payment-protection terms. Contact channels should be validated through an independently obtained route rather than relying solely on information encountered during a transaction. If a proposed engagement involves a regulated service beyond the media and advertising activities described on the site, the relevant regulator's registry should be checked for the specific entity and activity.

EVIDENCE

- The homepage provides distinct investor, careers, advertising, and legal/privacy pathways that can be compared with independently sourced corporate information.
- The stated business model covers advertising, podcast publishing, events, and audio/media services rather than a disclosed financial product.
- Behavioral testing recorded no hidden forms, no external password forms, no wallet activity, and no clipboard-write behavior.

Summary Verdict

Available evidence is consistent with an established, apparently legitimate website with a low scam and impersonation risk posture. The high-trust assessment is supported by the site's coherent corporate purpose, long operating history, clean reputation signals, and normal observed behavior, while independent confirmation of the real-world operator remains outstanding.

Infrastructure Integrity

The website is protected by CDN/WAF infrastructure, and the observed address was an edge address rather than an identified origin server. This architecture limits direct origin exposure and is a mitigating security control, but it is not, by itself, proof of legitimacy.

EVIDENCE

- The observed edge address is 52.171.221.170 on AS8075, Microsoft Corporation, US.
- Infrastructure resolution identified 1 edge IP, 1 CDN edge, and 0 likely origin candidates.
- The hosting infrastructure is recorded in the United States and uses ARIN registration.

Closing Assessment

Ordinary independent counterparty, terms, contact-channel, and payment-protection checks should be completed before credential submission or payment, particularly where the engagement is commercial or high value.

Written analysis generated 2026-08-10 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	50%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of iheartmedia.com.

- The request stayed on iheartmedia.com. It was not redirected to another domain. CLEAR
- Registration is published under MarkMonitor Inc.. CLEAR
- DNS for this domain is served by iheartmedia.com, across 6 name servers. NOTED
- The registration is paid up to 2027-03-13. NOTED
- It is hosted on MICROSOFT-CORP-MSN-AS-BLOCK, from a server in US. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about iheartmedia.com at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
