

Is indice.in safe? TrustSniffer's low-trust assessment: 40/100

indice.in

Verdict

40

OUT OF 100

LOW TRUST

indice.in is low-trust and potentially risky.

Several risk patterns were present. Do not send money or personal details until you have verified this business another way.

Sensitive Interaction Risk

Governance Risk

Assessed 2026-08-21 by automated analysis. Classification confidence 55%.

What this site appears to be

Business website for INDICE SOFTWARE LLP, a Bangalore-based software agency offering AI/ML, full-stack engineering, and platform services. The page includes service descriptions, process, FAQs, testimonials, contact email, and a booking form for free consultations.

Evidence status and limitations

- Evidence completeness: UNKNOWN
- The real-world operator identity was not independently verified.
 - Module-level completeness metadata is unavailable for this legacy report.

What indice.in served when TrustSniffer captured it on 2026-08-21. The page may look different now.

Key findings

- Automated classification: Sensitive Interaction Risk.
- Domain age: less than 1 year (registration continuity).
- Public web-archive history exists since 2015.
- At least one reputation service TrustSniffer consulted had flagged this domain at assessment time.

Full analysis

Overview

INDICE is a software-agency website presenting bespoke AI/ML development, full-stack engineering, data, platform, and consulting services under the INDICE SOFTWARE LLP name. Its apparent business model is pre-sales for software projects, using service descriptions, testimonials, contact facilities, and free consultation bookings to acquire customers.

Scam/Impersonation Risk

The site's page content presents a coherent corporate software-services proposition and does not show a login form, cryptocurrency functionality, hidden sensitive forms, or detected brand impersonation. However, this otherwise benign presentation is outweighed by confirmed external threat detections: three malicious and one suspicious classifications were recorded, and the domain is blacklisted by two external sources. These are direct reputation contradictions to the site's professional appearance and support a clearly cautionary posture for sensitive interaction. No conflicting legal-entity names, phishing indicators, or impersonation claims were observed across the reviewed pages. The available identity linkage is therefore only likely, not independently verified.

EVIDENCE

- The homepage describes AI development, full-stack applications, data services, and free consultation booking, with no login form detected.
- Domain registration telemetry records creation on 2026-01-25, with an age of 0.57 years.
- Historical records contain 24 archive snapshots, first seen on 2015-03-23 and last seen on 2019-11-19, covering 5 years tracked.
- External reputation telemetry records 3 malicious and 1 suspicious detections, with blacklist status confirmed by 2 external sources.

Regulatory Verification Notes

The legal and identity presentation identifies INDICE SOFTWARE LLP and describes a Bangalore-based software agency. The available pages support a conventional software-services model rather than a regulated financial offering, but no licensing claim or license number is presented in the reviewed material; this is a disclosure gap requiring confirmation where a proposed engagement falls within a regulated activity. The terms, privacy-policy, services, testimonials, and contact pages provide a recognizable site structure, while the absence of independently verified operator identity means the on-site entity claim should not be treated as proof of real-world ownership. A third-party broker-intelligence check produced no match and does not constitute a legal or licensing determination.

EVIDENCE

- The services and about-style content identifies the business as INDICE SOFTWARE LLP and places it in Bangalore, India.
- The terms and privacy-policy links are present alongside services, testimonials, contact, and sitemap pages.
- Registration telemetry lists NAMECHEAP as registrar, and the site's TLS certificate is DV-validated, issued by WE1, and valid to 2026-10-20.
- No license claim or license number appears in the reviewed business-model disclosures.

What to Verify Next

Before any contract, payment, or transfer of confidential business information, an acquiring organisation should independently confirm INDICE SOFTWARE LLP through the applicable Indian corporate registry and obtain the contracting entity's legal address, authorised signatory, invoice details, and liability terms. Any claimed client references should be validated through independently sourced contact channels rather than relying solely on testimonials displayed on the site. Payment should use a protected commercial method with clear milestone, refund, intellectual-property, data-processing, and dispute provisions. Official support and contact channels should also be confirmed through an independent, offline route.

EVIDENCE

- The website's stated commercial model is consultation-led software delivery and project-based service contracting.
- The reviewed site contains a booking form and contact form but no sensitive credential-entry form.
- The legal and contractual pages are available for review but do not, in the supplied evidence, establish independent operator verification.
- The external reputation contradiction requires registry, reference, and payment-control checks before material engagement.

Summary Verdict

The overall posture is **low trust with elevated sensitive-interaction risk**. The site may represent a genuine software-services business, but the confirmed blacklist and malicious detections prevent the available evidence from supporting routine trust in account, credential, payment, or confidential-information interactions.

Infrastructure Integrity

The site is delivered through Cloudflare's CDN/WAF infrastructure, with only CDN edge addresses observed and no origin candidate identified. This provides a meaningful protective control against direct origin exposure, but it is a shared hosting and traffic-delivery service and does not validate the operator or offset the external reputation findings.

EVIDENCE

- Served from AS13335, CLOUDFLARENET — Cloudflare, Inc., US.
- Four observed addresses were CDN edge addresses: 104.21.92.5, 172.67.183.247, 2606:4700:3030::6815:5c05, and 2606:4700:3032::ac43:b7f7.
- The transport certificate is DV-validated, issued by WE1, and expires on 2026-10-20.

Closing Assessment

The appropriate institutional posture is to suspend sensitive engagement until independent entity, reference, contractual, payment, and reputation checks have been completed; passive review may continue, but credentials, financial transactions, and confidential disclosures should not be used in the interim.

Written analysis generated 2026-08-21 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

2 findings contributed to this verdict, raised by registration and ownership, analysis engine.

01 Governance Risk

- The public registration record for this domain is incomplete.

Registration and ownership rule:KF_WHOIS_INCOMPLETE

02 Sensitive Interaction Risk

- The analysis matched a pattern TrustSniffer treats as a direct threat to a visitor.

About this assessment

A trust score summarises the evidence TrustSniffer could collect about indice.in at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
