Full analysis

Overview

Inexchange is a Swedish-language corporate website for a Visma-affiliated B2B software provider offering electronic invoice delivery, supplier-invoice digitization, e-ordering, and business-system integrations. It presents subscription-based services for businesses and public-sector organizations, supported by product information, customer cases, pricing, account access, support resources, and corporate contact details.

Scam/Impersonation Risk

No phishing, brand impersonation, conflicting legal identity, or other identity contradiction was observed. The long-established domain, clean external threat reputation, stable interactive behavior, and consistent corporate product content collectively support the conclusion that this is the legitimate Inexchange service rather than a deceptive imitation. The homepage's only detected form was a site-search function; no hidden, externally submitted password, cryptocurrency-wallet, clipboard-hijacking, or cloaking behavior was identified.

- The domain-registration record shows registration through www.NameSRS.com in 2006: Registered 2006 (~19.77 years old), with current expiration dated 2026-10-27.
- External reputation checks recorded 0 malicious and 0 suspicious detections, no phishing indication, no external threat-list hit, and 0 infrastructure-abuse reports.
- The homepage consistently identifies the service as "Inexchange" and presents electronic-invoicing and order-management products without detected brand-impersonation indicators.
- Interactive testing of the homepage completed successfully in 2 of 2 runs, with no cloaking, hidden forms, suspicious inline scripts, wallet-provider activity, or clipboard manipulation.

Regulatory Verification Notes

The website presents a coherent operating identity through its stated Visma affiliation, physical office addresses, customer references, support material, and privacy resources. No financial-services licence is claimed, but the stated activity is B2B invoicing and order-management software rather than brokerage, deposit-taking, investment, or cryptoasset activity; the absence of such a claim therefore does not create a scam indicator. The available page evidence does not establish a particular regulated status, and no matching broker record was identified in the supplied third-party broker context.

- The homepage describes customer-invoice delivery, supplier-invoice processing, electronic ordering, Peppol connectivity, and business-system integration for commercial and public-sector customers.
- Corporate content on the homepage includes a Visma affiliation, customer testimonials, office addresses, support resources, and privacy documentation.
- The site's transport encryption uses a WE1-issued DV TLS certificate, valid to 2026-10-09.

- The hosting artifact is served from AS209242 (CLOUDFLARESPECTRUM – Cloudflare London, LLC, US).

What to Verify Next

For enterprise onboarding, procurement should confirm the contracting entity and applicable terms from the final order documentation, review the privacy and data-processing materials against organizational requirements, and validate service scope, retention, integration permissions, and support arrangements. Account access should use the organization’s established identity-management and payment-approval controls, as would be expected for any supplier handling invoice workflows.

- The homepage provides separate account-login and account-creation routes, making identity-management review relevant to deployment.
- The product pages describe integrations and automated exchange of invoice and order data, supporting a review of data flows and access permissions.
- The site provides pricing, support, privacy, FAQ, ecosystem, partner, and API resources for procurement and technical due diligence.

Summary Verdict

The site is a legitimate, established, and trustworthy B2B software service. Its consistent corporate identity, mature operating footprint, clean security reputation, and benign observed behavior converge strongly in support of normal business use, including account login and standard transactions.

Infrastructure Integrity

Cloudflare CDN/WAF protection fronts the website, with all observed addresses operating as edge servers rather than a directly exposed origin. This reduces direct origin exposure and provides conventional traffic-filtering benefits, although protective infrastructure is a security control rather than independent proof of legitimacy.

Closing Assessment

Normal interaction is appropriate; prospective enterprise customers can proceed through ordinary procurement, access-control, contractual, and supplier-onboarding processes.

Written analysis generated 2026-07-31 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	LIKELY
Identity score	79/100
Identity verification confidence	78%

- Trusted social count=3

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of inexchange.se.

- The request stayed on inexchange.se. It was not redirected to another domain. CLEAR
- Registration is published under www.NameSRS.com. CLEAR
- DNS for this domain is served by excedodns.org, across 5 name servers. NOTED
- The registration is paid up to 2026-10-27. NOTED
- It is hosted on CLOUDFLARESPECTRUM, from a server in US. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about inexchange.se at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
