- Automated classification: Not Scam.
- Domain age: more than 10 years (registration continuity).
- Public web-archive history exists since 2003.
- No flags from the reputation services TrustSniffer consulted at assessment time.

Full analysis

Overview

The website is the Portuguese-language corporate presence of In Media, a Porto Alegre digital agency that markets website and online-store development, visual identity, graphic design, SEO, UI/UX, and hosting services, primarily through portfolio content, quotation requests, and direct business contact.

Scam/Impersonation Risk

No identity contradictions, phishing behavior, brand impersonation, malicious reputation findings, or other scam indicators were observed. The homepage consistently presents a conventional digital-services business, while the site's long historical footprint and stable behavioral profile support continuity rather than opportunistic repurposing. Its only detected form was a non-sensitive search form, with no hidden forms, credential collection, untrusted submission destination, cloaking, or suspicious external network activity.

- Domain registration records identify In Media as the owner and show registration on 18 October 2015 (~10.79 years old), with expiry on 18 October 2026.
- The web archive records 469 snapshots spanning 2 February 2003 to 7 June 2026 (24 years tracked), with no detected suspicious repurposing or semantic drift.
- The homepage presents the “In Media – Soluções Digitais” identity consistently and contains no phishing or deceptive-content indicators.
- Behavioral testing completed two successful runs with zero external requests, zero external posts, zero suspicious inline scripts, and no cloaking, wallet-drainer, clipboard-hijacking, or hidden-form behavior.

Regulatory Verification Notes

The site represents an ordinary corporate digital agency rather than a financial, investment, payment, or other inherently regulated service. No regulated-service or licensing claim was identified, so the absence of a regulatory licence is not anomalous for the stated business model. The homepage provides a coherent trading identity, regional context, service descriptions, portfolio and blog sections, and contact routes; no conflicting legal-entity names were found. No third-party broker profile matched the business, which is neutral and consistent with its non-broker activity.

- The homepage identifies the business as In Media Soluções Digitais and describes it as an established company focused on client satisfaction.
- The homepage's navigation includes About Us, Solutions, Portfolio, Blog, and Contact sections, supporting a conventional corporate presentation.

- The hosting infrastructure is served from AS29802 (HVC-AS – HIVELOCITY, Inc., US).
- The site’s transport encryption uses a valid DV TLS certificate issued by YR1, valid to 17 October 2026.

What to Verify Next

For material procurement or a continuing supplier relationship, standard vendor due diligence should confirm the contracting entity, quotation terms, service scope, data-processing responsibilities, intellectual-property ownership, hosting arrangements, and support commitments. Official contact channels and portfolio references may also be independently confirmed before issuing a purchase order or transferring production assets.

- The homepage directs prospective customers to request quotations, making written confirmation of deliverables, pricing, and acceptance criteria relevant before engagement.
- The advertised hosting activity may involve custody or processing of client website data, warranting review of security, backup, retention, and incident-response terms.
- The portfolio sections provide a basis for independently validating representative work and customer references.
- The Contact and About Us sections provide the appropriate starting points for confirming the contracting identity and official communication channels.

Summary Verdict

The website is legitimate, established, and trustworthy, with strong convergence across identity, historical continuity, clean external reputation, secure transport, and benign observed behavior. No contradictory evidence undermines its stated purpose or business identity, and confidence in its authenticity is high.

Infrastructure Integrity

The site is hosted directly by HIVELOCITY in the United States without a detected CDN or WAF layer; three likely origin addresses were observable. This is a conventional direct-hosting configuration rather than evidence of abuse, although it provides less origin shielding than an edge-protected deployment.

Closing Assessment

Normal interaction, including quotation requests, any account login made available, and standard use, is appropriate; material commercial engagements should proceed through routine supplier contracting and procurement controls.

Written analysis generated 2026-07-31 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	50%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of inmedia.com.br.

- The request stayed on inmedia.com.br. It was not redirected to another domain. CLEAR
- DNS for this domain is served by 111.24, across 4 name servers. NOTED
- The registration is paid up to 2026-10-18. NOTED
- The earliest public archive of this site is from 2003-02-02. CLEAR
- It is hosted on HVC-AS, from a server in US. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about inmedia.com.br at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
