

Is interdata.vn legit? TrustSniffer's high-trust assessment: 100/100

interdata.vn

Verdict

100

OUT OF 100

HIGH TRUST

interdata.vn appears legitimate.

Our checks found nothing pointing to fraud. Ordinary care still applies when you pay or sign in.

Not Scam

Low Risk

Assessed 2026-08-04 by automated analysis. Classification confidence 55%.

What this site appears to be

Vietnamese commercial website for InterData, a provider of VPS, cloud servers, hosting, dedicated-server rental, colocation, storage, security, and software services. The page includes service specifications, starting prices, support information, corporate identity details, a physical address, tax number, policies, and customer testimonials.

Key findings

- Automated classification: Not Scam.
- No flags from the reputation services TrustSniffer consulted at assessment time.
- The operator behind the site could not be independently connected to a real-world brand or person.

Full analysis

Overview

InterData is a Vietnamese commercial cloud-hosting and IT-infrastructure provider offering recurring VPS, cloud servers, web hosting, dedicated-server rental, colocation, storage, domain, security, and software services to individuals and businesses, with published entry-level pricing and support arrangements defining a clear service-based business model.

Scam/Impersonation Risk

No identity contradictions, phishing behavior, brand impersonation, or malicious reputation signals were observed. The homepage consistently presents InterData as the service provider and supports that identity with corporate particulars, a physical address, a tax number, customer policies, and operational contact channels. Interactive testing also found no hidden or sensitive forms, credential forwarding, cloaking, clipboard manipulation, or suspicious scripts. Taken together, the coherent commercial presentation, clean external reputation, and benign browser behavior provide strong evidence against a scam or impersonation interpretation.

- The homepage identifies InterData, provides corporate identity details, a physical address and tax number, and describes a coherent paid-services model.
- The homepage contained no sensitive form, hidden form, untrusted form destination, or embedded login form during inspection.
- External reputation checks recorded 0 malicious and 0 suspicious detections, no safe-browsing alert, no reported abuse, and an established global traffic rank of 57,877.
- Two successful behavioral runs found no cloaking, suspicious inline scripts, wallet-draining behavior, clipboard hijacking, or external password submission.

Regulatory Verification Notes

The available corporate disclosures are appropriate for an ordinary technology-services provider, and the evidence does not indicate that InterData is presenting itself as a financial intermediary or another business for which a financial-services licence would ordinarily be central to the offering. The homepage nevertheless makes promotional claims concerning internationally recognized operational and system-security certifications; the supplied content does not identify the individual certifications or their issuing bodies. Claims that more than 30,000 businesses trust the provider and that it operates six data centres across three countries or regions are commercial representations rather than independently established facts in this assessment.

- The homepage publishes company and policy information alongside recurring service prices, presenting a defined supplier-customer relationship.

- The homepage claims internationally recognized operational and system-security certifications without naming the certification standards, issuers, or certificate identifiers in the supplied page content.
- The homepage advertises more than 30,000 business customers, six global data centres, operations across three countries or regions, and two Vietnamese branches.
- The site's transport encryption uses a WE1-issued domain-validated TLS certificate, valid to 2026-09-20.

What to Verify Next

Procurement due diligence should obtain the named security and operational certificates directly from InterData and validate their scope, issuing bodies, and current status. Prospective enterprise customers should also confirm the contracting legal entity and tax particulars against the executed service agreement, review the applicable service-level and data-handling terms, and establish independently authenticated escalation contacts before migrating production workloads. Capacity and resilience requirements should be tested against written commitments rather than promotional performance statements.

- The homepage advertises a 99.9% uptime service level, providing a specific commitment for comparison with the governing contract.
- The homepage promotes server bandwidth of up to 80 Gbps and dedicated-server bandwidth of up to 40 Gbps, making capacity validation relevant to workload planning.
- The homepage states that customers receive administrative control and near-immediate resource scaling, making access control, backup responsibility, and incident-recovery terms material to onboarding.
- The homepage lists a 24-hour support hotline, providing a channel whose escalation coverage can be confirmed during procurement.

Summary Verdict

InterData presents as a legitimate, established, and trustworthy commercial website with a consistent identity, a clear business model, clean reputation evidence, and benign observed behavior. No contradictory signals undermine its authenticity. Normal interaction, including account login and standard use, is appropriate.

Infrastructure Integrity

The site is protected by Cloudflare's CDN and web-application firewall, with all observed addresses belonging to edge infrastructure. This reduces direct origin exposure and provides conventional availability and application-layer protection, although such controls are mitigating security measures rather than independent proof of business legitimacy.

- The hosting infrastructure is served from AS13335 (Cloudflare, Inc., US).
- Four observed addresses were Cloudflare edge endpoints; no origin candidate was identified in the observed resolution set.

Closing Assessment

Prospective customers may engage with the site normally, while applying standard supplier onboarding, contractual review, and workload-security controls proportionate to the criticality of the intended service.

Written analysis generated 2026-08-04 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	50%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of interdata.vn.

- The request stayed on interdata.vn. It was not redirected to another domain. CLEAR
- It is hosted on CLOUDFLARENET, from a server in US. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about interdata.vn at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
