

Is intermedia.com legit? TrustSniffer's high-trust assessment: 100/100

intermedia.com

Verdict

100

OUT OF 100

HIGH TRUST

intermedia.com appears legitimate.

Our checks found nothing pointing to fraud. Ordinary care still applies when you pay or sign in.

Not Scam

Safe for Login

Low Risk

Assessed 2026-08-10 by automated analysis. Classification confidence 75%.

What this site appears to be

Intermedia corporate website describing unified communications, contact center, email and AI-enhanced features. Contains product descriptions, partner information, customer stories, awards, and a lead-generation/demo request form.

Evidence status and limitations

- Evidence completeness: UNKNOWN
- The real-world operator identity was not independently verified.
 - Module-level completeness metadata is unavailable for this legacy report.

Key findings

- Automated classification: Not Scam.
- Domain age: more than 10 years (registration continuity).
- Public web-archive history exists since 1997.
- No flags from the reputation services TrustSniffer consulted at assessment time.

Full analysis

Overview

This website is Intermedia's corporate marketing and service platform for cloud unified communications, business telephony, contact-center operations, business email, collaboration, security, and related SaaS services. It presents product information, partner and customer material, support and sales routes, and a request-demo function consistent with a subscription and service-contract business model.

Scam/Impersonation Risk

No contradictions were observed: the available evidence does not indicate phishing, brand impersonation, malicious content, or a confirmed blacklist. The homepage is a substantive corporate presentation rather than a thin acquisition page, and external reputation checks returned no malicious or suspicious findings. Behavioral testing recorded some implementation-level anomalies, including dynamic page changes, console errors, and limited non-whitelisted external activity, but these were not accompanied by hidden forms, credential-exfiltration behavior, wallet activity, cloaking, or other high-risk abuse patterns. The overall evidence therefore remains consistent with an established, apparently legitimate website.

EVIDENCE

- The homepage is classified as a corporate marketing page and contains no detected brand-impersonation or phishing indicators.
- The domain was registered on 1993-03-31 and is 33.38 years old; the registrar is GoDaddy.com, LLC.
- The web archive contains 1,369 snapshots from 1997 through 2026, covering 30 tracked years.
- External reputation checks recorded 0 malicious detections, 0 suspicious detections, and a global traffic rank of 95143.

Regulatory Verification Notes

The site presents a conventional SaaS model involving unified communications, business phone and VoIP services, contact-center capabilities, AI-assisted communications, Microsoft 365 integration, archiving, security, partner programs, and demo-led sales. The reviewed material does not state a financial-services license or registration number; given the business model presented, this is a transparency and procurement-verification point rather than evidence of deceptive activity. The real-world operator identity is not independently verified, so the apparent legitimacy of the website should not be treated as proof of a specific legal entity or contractual counterparty. The transport layer provides a valid, known-issuer domain-validated certificate, which supports technical integrity but does not itself establish legal identity.

EVIDENCE

- The homepage describes cloud communications, contact-center, email, collaboration, AI, archiving, and security services and includes a lead-generation/demo request form.
- The site content identifies a subscription, partner/reseller, and service-contract business model; no financial-services license number is stated in the reviewed material.
- TLS is issued by YE2 at DV validation level and is valid through 2026-09-16T04:01:37+00:00.

What to Verify Next

Before credential or payment interactions, an enterprise procurement process should independently confirm the contracting merchant or legal entity, applicable cancellation or return terms, and available payment protections. Where a regulated service is being purchased or an applicable jurisdiction requires registration, the relevant public registry should be checked directly. Official support and sales channels should also be confirmed through an independently sourced corporate contact route rather than relying solely on a newly received message.

EVIDENCE

- The homepage publishes separate support, sales, partner, and customer-login routes, providing channels that can be cross-checked independently.
- The homepage contains one lead-generation/contact-demo form and no detected password or sensitive-data form.
- The site offers partner and customer-support pathways that can be validated as part of normal supplier onboarding.

Summary Verdict

Available evidence is consistent with an established, apparently legitimate website. The overall posture is high trust and low risk, with no observed scam or impersonation contradictions; the remaining qualification is that the real-world operator identity has not been independently verified.

Infrastructure Integrity

The site is protected by Cloudflare CDN/WAF infrastructure, and all observed addresses were CDN edge addresses rather than exposed origin candidates. This provides a meaningful mitigation against direct origin exposure and common network-level abuse, while remaining a protective technical characteristic rather than proof of legitimacy.

EVIDENCE

- Hosting resolved to AS13335, CLOUDFLARENET — Cloudflare, Inc., US.
- Four observed addresses were identified as CDN edge infrastructure, with 0 likely origin addresses.
- The infrastructure resolution status was resolved and the detected CDN was Cloudflare.

Closing Assessment

Normal browsing and service evaluation are proportionate; before submitting credentials or payment details, ordinary independent checks of the contracting party, commercial terms, and payment protections should be

completed.

Written analysis generated 2026-08-10 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	25%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of intermedia.com.

- The request stayed on intermedia.com. It was not redirected to another domain. CLEAR
- Registration is published under GoDaddy.com, LLC. CLEAR
- DNS for this domain is served by cloudflare.com, across 2 name servers. NOTED
- The registration is paid up to 2028-04-01. CLEAR
- The earliest public archive of this site is from 1997-06-30. CLEAR
- It is hosted on CLOUDFLARENET, from a server in US. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about intermedia.com at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
