

Is internethaber.com legit? TrustSniffer's high-trust assessment: 100/100

internethaber.com

Verdict

100

OUT OF 100

HIGH TRUST

internethaber.com appears legitimate.

Our checks found nothing pointing to fraud. Ordinary care still applies when you pay or sign in.

Not Scam

Safe for Login

Low Risk

Assessed 2026-07-31 by automated analysis. Classification confidence 75%.

What this site appears to be

A content-rich Turkish news homepage covering politics, current events, sports, economics, world affairs, health, entertainment, technology, weather, and video. It includes publication, contact, advertising, privacy, cookie, and terms links plus a consent platform describing extensive advertising and audience-tracking practices.

Key findings

- Automated classification: Not Scam.
- Domain age: more than 10 years (registration continuity).
- Public web-archive history exists since 2000.
- No flags from the reputation services TrustSniffer consulted at assessment time.

Full analysis

Overview

The website is an established Turkish news and media portal presenting breaking news, politics, economics, sports, world affairs, health, entertainment, technology, weather, commentary, and video journalism through an advertising-supported publishing model.

Scam/Impersonation Risk

No identity contradictions, brand impersonation, phishing behavior, malicious reputation findings, or other confirmed scam indicators were observed. The domain's long operating history, substantial archival continuity, established global traffic footprint, and clean external reputation converge with the content-rich news operation to support a legitimate identity. The homepage contained no login or sensitive-data form, concealed form, cryptocurrency functionality, wallet interaction, or investment solicitation.

- The domain was registered on 9 May 2000 and is approximately 26.24 years old; registration is maintained through Network Solutions, LLC and currently expires on 9 May 2031.
- Historical records contain 5,000 archive snapshots spanning October 2000 to January 2014, covering 15 tracked years with no established suspicious repurposing or semantic drift.
- Reputation checks recorded zero malicious and zero suspicious detections, no phishing or impersonation finding, and no reported abuse; the domain ranks 48,678 globally.
- The homepage presents a broad, internally coherent news catalogue and contains no sensitive, hidden, or externally directed credential form.

Regulatory Verification Notes

The site operates as a general news publisher rather than a financial, brokerage, deposit-taking, or investment service, so the supplied content does not establish a need for financial-services licensing. Publication, contact, advertising, privacy, cookie, and terms links are present, providing a conventional disclosure framework for an advertising-funded media portal. Its consent materials explicitly describe personalized advertising, device fingerprinting, precise-geolocation processing, session recording, and cross-partner data sharing; these are material privacy considerations, but they are disclosed commercial-data practices rather than evidence of fraud.

- The homepage identifies news, commentary, video, lifestyle content, advertising, sponsored material, and audience measurement as the apparent operating model; it does not solicit deposits or offer investment products.
- The homepage navigation includes publication information and dedicated contact, advertising, privacy, cookie, and terms links.

- The consent interface discloses device fingerprinting, partner data sharing, precise-geolocation processing, session recording, and personalized advertising.
- The site uses a DV TLS certificate issued by WE1, valid until 4 September 2026.

What to Verify Next

Routine institutional due diligence should confirm the publisher identity and responsible editorial entity through the linked publication information, review the privacy and consent terms against applicable data-protection requirements, and confirm official contact channels independently before establishing a commercial or advertising relationship. Prospective advertising partners should also document how audience data is shared and processed across partners.

- The publication-information link provides the appropriate on-site starting point for confirming the responsible publishing entity.
- The privacy and cookie links are the relevant sources for assessing consent, retention, partner sharing, and data-subject rights.
- The advertising and contact links provide the stated channels for validating commercial arrangements and authorized representatives.

Summary Verdict

The website presents a legitimate, established, and trustworthy news operation with strong convergence across provenance, reputation, traffic, content maturity, and technical security. No contradictory risk signals were identified, and the overall posture supports normal interaction.

Infrastructure Integrity

Cloudflare provides the site’s CDN and WAF layer, with all observed addresses operating as edge infrastructure rather than exposed origin hosts. This reduces direct origin exposure and provides mainstream protective controls, although infrastructure protection is a mitigating security factor rather than independent proof of legitimacy.

- The site is served from AS13335 (CLOUDFLARENET — Cloudflare, Inc., US).
- Four observed IP addresses were Cloudflare edge addresses, with no origin-server candidate identified.
- Transport encryption uses a valid WE1-issued DV certificate expiring on 4 September 2026.

Closing Assessment

Normal use, including account login and standard interaction where offered, is appropriate, subject to ordinary organizational privacy and vendor-governance controls.

Written analysis generated 2026-07-31 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	UNVERIFIED
Identity score	30/100

Identity verification confidence	50%
----------------------------------	-----

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of internethaber.com.

- The request stayed on internethaber.com. It was not redirected to another domain. CLEAR
- Registration is published under Network Solutions, LLC. CLEAR
- DNS for this domain is served by cloudflare.com, across 2 name servers. NOTED
- The registration is paid up to 2031-05-09. CLEAR
- The earliest public archive of this site is from 2000-10-01. CLEAR
- It is hosted on CLOUDFLARENET, from a server in US. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about internethaber.com at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
