

Is internethost.com.br legit? TrustSniffer's high-trust assessment: 100/100

internethost.com.br

Verdict

100

OUT OF 100

HIGH TRUST

internethost.com.br appears legitimate.

Our checks found nothing pointing to fraud. Ordinary care still applies when you pay or sign in.

Not Scam

Safe for Login

Low Risk

Assessed 2026-07-31 by automated analysis. Classification confidence 75%.

What this site appears to be

Portuguese-language commercial homepage for Internet Host, advertising website hosting, servers, domain registration, e-commerce software, technical support, and web-design packages with published prices. The page presents a conventional low-risk service model but appears dated, citing a 2000–2013 copyright period and legacy server technology.

Evidence status and limitations

Evidence completeness: UNKNOWN

- Module-level completeness metadata is unavailable for this legacy report.

Key findings

- Automated classification: Not Scam.
- Domain age: more than 10 years (registration continuity).
- Public web-archive history exists since 2001.
- No flags from the reputation services TrustSniffer consulted at assessment time.

Full analysis

Overview

The website is a Portuguese-language commercial service portal for Internet Host, presenting recurring website-hosting plans, domain registration, virtual and dedicated servers, e-commerce software, technical support, and fixed-price web-design packages with published pricing and deliverables.

Scam/Impersonation Risk

No identity contradictions, phishing indicators, brand impersonation, or adverse threat-reputation signals were observed. The conventional service model, long domain tenure, continuous historical presence, and benign interaction testing support the conclusion that this is an established commercial website rather than a deceptive or recently created operation. The homepage contained no sensitive or concealed forms, initiated no external requests or posts during testing, and exhibited no cloaking.

- Domain-registration records identify CHS - CENTRAL DE HOSPEDAGEM DE SITES LTDA ME as the owner; the domain was registered in 2000 and is approximately 25.92 years old.
- The domain's archived history comprises 227 snapshots spanning 2001–2026, representing 26 years of tracked presence, with no confirmed suspicious repurposing.
- Reputation checks recorded zero malicious or suspicious detections, no malicious safe-browsing classification, no external threat-list hit, and no reported abuse against the hosting address.
- Behavioral examination of the homepage found no login form, hidden form, external form destination, wallet interaction, clipboard interference, cloaking, or external XHR/post activity.

Regulatory Verification Notes

The sampled homepage presents a web-hosting and web-services business, not an inherently regulated financial product. It does not make a licensing claim, and the supplied evidence does not establish that a sector-specific authorization is required for the services advertised. Corporate and legal disclosure details beyond the registered-owner record are unclear from the sampled page; this is a minor commercial due-diligence point, not evidence of impersonation or misconduct. The page's dated presentation and references to legacy technology affect currency and service-quality assessment more than legitimacy.

- The homepage describes hosting, domain, server, e-commerce, support, and web-design offerings with published prices, but the observed content does not identify a regulatory authority or licence number.
- The homepage cites a 2000–2013 copyright period and uses legacy-technology language, indicating that some published material may not reflect the current service environment.

- The site is served from AS29802 (HVC-AS - HIVELOCITY, Inc., US).
- The site's transport encryption uses a YR1-issued domain-validated certificate, valid until 2026-10-14.

What to Verify Next

Prospective customers should confirm the current legal contracting entity, billing terms, service-level commitments, renewal and cancellation conditions, backup arrangements, and data-handling provisions before procuring production hosting. Current package specifications and support channels should also be confirmed directly, particularly where operational decisions depend on technology, capacity, availability, or recovery commitments.

- The homepage publishes core package pricing and deliverables, providing a basis for comparison with the final quotation and contract.
- The homepage advertises telephone, email, form, online-help, FAQ, and chat contact routes, allowing current support availability to be confirmed through an independent channel.
- The observed landing page contains substantial service content but no structured metadata or canonical-page declaration, consistent with an older web implementation rather than a modern procurement document.
- The homepage exposes no sensitive data-entry form, so contractual, privacy, and service-level terms would need to be obtained through the site's account-opening or direct-sales process.

Summary Verdict

The site is legitimate, established, and trustworthy, with strong convergence across provenance, commercial content, technical operation, and external reputation. No contradictory evidence undermines its stated identity or purpose. Normal interaction, including account login and standard use, is appropriate.

Infrastructure Integrity

The site resolves directly to a single likely origin address in the United States and does not use a detected CDN or WAF edge layer. Direct-origin hosting is consistent with its traditional architecture; it provides less network-layer shielding than a managed edge service but is not, in this evidence, associated with abuse or suspicious infrastructure.

Closing Assessment

Standard engagement is appropriate, with ordinary supplier due diligence and contractual review proportionate to the intended hosting workload.

Written analysis generated 2026-07-31 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	50%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of internethost.com.br.

- The request stayed on internethost.com.br. It was not redirected to another domain. CLEAR
- DNS for this domain is served by 90.83, across 3 name servers. NOTED
- The registration is paid up to 2026-09-03. NOTED
- The earliest public archive of this site is from 2001-02-01. CLEAR
- It is hosted on HVC-AS, from a server in US. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about internethost.com.br at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
