Key findings

- Automated classification: Not Scam.
- Domain age: 3 to 10 years (registration continuity).
- Public web-archive history exists since 2008.
- No flags from the reputation services TrustSniffer consulted at assessment time.

Full analysis

Overview

The website is the corporate presence of Internet Hotspot, a Dutch provider of managed network and connectivity services for hospitality, retail, and office environments, offering installation, monitoring, support, and recurring management of business-critical communications infrastructure.

Scam/Impersonation Risk

No identity contradictions, phishing indicators, brand impersonation, or deceptive browser behaviour were observed. The site presents a coherent, low-risk B2B service model supported by substantial historical provenance and a clean external threat reputation. Its support form does not request sensitive information or transmit data to an untrusted destination.

- The homepage consistently identifies Internet Hotspot as a provider of business networking and managed IT services, with a physical address, telephone number, contact details, customer references, and support reporting.
- The domain archive contains 324 snapshots spanning 2008–2026 (19 years tracked), with no detected semantic repurposing.
- External reputation checks recorded 0 malicious and 0 suspicious detections, no phishing finding, no reported abuse, and inclusion within the top 1 million globally ranked domains.
- Interactive testing completed successfully without cloaking, hidden forms, credential forwarding, clipboard manipulation, suspicious scripts, or untrusted external submissions.

Regulatory Verification Notes

The service offering is commercial managed IT infrastructure rather than an inherently regulated financial activity, and the website makes no licensing claim requiring validation. Its disclosed operating model is specific and credible: business Wi-Fi, internet and 4G/5G backup connectivity, payment-terminal and point-of-sale continuity, VoIP telephony, camera systems, cabling, round-the-clock monitoring, and support. The homepage also claims service to more than 1,600 businesses, monthly uptime of 99.98%, an FD Gazellen award, and a Google rating of 4.8 from 18 reviews; these are commercial representations rather than regulatory credentials. The supplied page evidence does not establish formal corporate-registration particulars, a minor procurement transparency note rather than a legitimacy concern.

- The homepage describes installation, hardware, connectivity, management, and recurring support contracts for hospitality, hotel, retail, and office customers.

- The homepage provides operational status information, customer cases, service descriptions, and concrete business contact information.
- The WHOIS record identifies Webstudio 7 as registrar and records creation on 11 May 2020 (~6.22 years old).
- The site uses a DV TLS certificate issued by WE1, valid until 1 September 2026.

What to Verify Next

Standard supplier onboarding should confirm the contracting entity and payment instructions through official documentation, obtain service-level and incident-response commitments, and substantiate material performance or customer-scale claims where they affect procurement decisions. Technical buyers should also define responsibility for access control, monitoring data, camera deployments, backup connectivity, and integration with payment or point-of-sale suppliers.

- The homepage offers direct coordination with point-of-sale vendors, making responsibilities and escalation boundaries relevant to contracting.
- The homepage’s round-the-clock monitoring and support proposition warrants documented availability, response-time, and recovery commitments.
- The support page provides a non-sensitive incident-reporting form suitable for confirmation during service onboarding.

Summary Verdict

Internet Hotspot is a legitimate, established, and trustworthy corporate website. Its coherent commercial identity, longstanding web presence, clean reputation, stable observed behaviour, and concrete service presentation converge strongly in support of normal interaction, including account login and standard use.

Infrastructure Integrity

The website is served through Cloudflare's CDN/WAF on AS13335 (Cloudflare, Inc., US); all four observed addresses were Cloudflare edge nodes. The origin server was shielded behind this mainstream protective layer, reducing direct exposure, although that protection is a security mitigation rather than independent proof of legitimacy.

Closing Assessment

Prospective customers may engage normally, subject to routine enterprise supplier onboarding and contractual due diligence proportionate to the operational importance of the proposed service.

Written analysis generated 2026-07-31 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	50%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of internethotspot.nl.

- The request stayed on internethotspot.nl. It was not redirected to another domain. CLEAR
- Registration is published under Webstudio 7. CLEAR
- DNS for this domain is served by cloudflare.com, across 2 name servers. NOTED
- The earliest public archive of this site is from 2008-06-04. CLEAR
- It is hosted on CLOUDFLARENET, from a server in US. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about internethotspot.nl at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
