

Is invmove.com a scam? TrustSniffer's high-risk assessment: 5/100

invmove.com

Verdict

5

OUT OF 100

CRITICAL RISK

invmove.com shows high-risk / scam indicators.

This assessment found strong scam indicators. Do not pay, sign in, or share personal details with this site.

Sensitive Interaction Risk

Governance Risk

Assessed 2026-09-22 by automated analysis. Classification confidence 55%.

What this site appears to be

Official project page for InvMove, a free LGPL-3.0 client-side Fabric mod that enables movement while inventory screens are open in Minecraft 1.21.11. Provides features, installation steps, configuration options, compatibility notes, FAQ, and a download link for v0.9.3.

Evidence status and limitations

- Evidence completeness: UNKNOWN
- The real-world operator identity was not independently verified.
 - Module-level completeness metadata is unavailable for this legacy report.

At a glance

The page as captured

<https://invmove.com/>

What invmove.com served when TrustSniffer captured it on 2026-09-22. The page may look different now.

Key findings

- Automated classification: Sensitive Interaction Risk.
- Domain age: less than 1 year (registration continuity).
- At least one reputation service TrustSniffer consulted had flagged this domain at assessment time.
- The operator behind the site could not be independently connected to a real-world brand or person.

Full analysis

Security Alert

Fortinet, Sophos flagged this site in external intelligence checks, indicating elevated compromise/scam exposure that requires immediate caution.

This website presents InvMove, a free open-source Minecraft client-side modification for Fabric 1.21.11, offering documentation, configuration guidance, compatibility information, and software downloads intended to let players move while inventory screens are open.

Scam/Impersonation Risk

The site's stated purpose and page content are consistent with an informational software-download project: it describes movement and background-overlay features, installation procedures, compatibility with REI, JEI, and EMI, dependencies including Fabric API and Cloth Config, and a latest release identified as version 0.9.3. The pages contain no login form, payment request, wallet connection, sensitive-data form, or obvious deceptive monetisation mechanism. However, this benign presentation is outweighed by confirmed external threat detections and a confirmed blacklist status, including multiple malicious classifications and detections associated with Fortinet and Sophos. These signals create a material risk that the download or delivery environment could be unsafe despite the site's non-financial appearance. No separate brand impersonation or

conflicting legal-entity identity was observed; the concern is the confirmed external threat and blacklist evidence rather than a demonstrated impersonation of a named third party.

EVIDENCE

- The homepage describes InvMove as a free, open-source Fabric 1.21.11 mod and provides a download for version 0.9.3.
- The installation and FAQ content describes client-side use, compatibility dependencies, and configuration options without presenting a login or payment workflow.
- External scanning recorded 3 malicious and 3 suspicious detections, with Fortinet and Sophos among the flagged vendors; the domain was also identified on an external blacklist.
- Domain registration evidence records creation on 2026-05-18 and an age of 0.35 years.

Regulatory Verification Notes

The site is not presented as a financial or regulated service, and its stated model is distribution of free software rather than custody, investment, lending, or payment activity. Nevertheless, the available material does not independently verify the real-world operator, and the site's legal and governance disclosures are unclear. The LGPL-3.0 reference describes the software licensing model, not regulatory authorisation. Because the confirmed blacklist and threat detections are security findings rather than licensing findings, they should not be treated as proof of a regulatory breach; they do, however, materially reduce confidence in the site's suitability for sensitive interaction.

EVIDENCE

- The project description identifies the software as LGPL-3.0 and free to download, with no financial service or regulated activity disclosed.
- The available project, installation, FAQ, and download material does not establish a verified operating entity or regulatory authorisation.
- The site's transport encryption uses a DV certificate issued by YR2, valid through 2026-12-20.
- The site is served through AS214351, identified as FEMOIT - FEMO IT SOLUTIONS LIMITED, GB.

What to Verify Next

Independent confirmation should be obtained from a trusted project source before downloading or executing the software, including confirmation that the project name, release version, source code, and published checksums correspond to the same maintainers. The downloaded file should be scanned locally and tested in an isolated environment without access to personal accounts, credentials, or sensitive files. Any support or maintainer identity should be confirmed through an independently established project channel rather than relying solely on contact details presented by this site.

EVIDENCE

- The homepage provides a direct software download and identifies a specific release, creating a concrete artifact for independent hash and provenance validation.
- The installation guidance identifies Fabric API, Cloth Config, Mod Menu, and compatibility add-ons as dependencies that should be obtained from trusted, independently verified sources.
- Behavioural testing observed no wallet connection, hidden forms, password-external forms, clipboard hijacking, or external XMLHttpRequest activity during two successful runs; these observations do not override the external threat findings.

Summary Verdict

The overall posture is **critical trust risk** with a high likelihood that sensitive interaction could expose an organisation or user to avoidable security consequences. The site's clean informational presentation does not reconcile the confirmed blacklist and malicious-detection signals, while operator identity remains unverified.

Infrastructure Integrity

Cloudflare CDN/WAF protection is present and is a mitigating control against direct exposure of the underlying service, but it is not evidence of legitimacy. The observed address was a CDN edge address, with no origin candidate identified in the analysis; this limits independent verification of the hosting environment and does not offset the external threat reputation.

Closing Assessment

Access should remain limited to controlled, read-only investigation until the software provenance and operator identity have been independently validated; credentials, account authentication, and execution of downloaded files should not be introduced into the environment on the basis of this site alone.

Written analysis generated 2026-09-22 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

2 findings contributed to this verdict, raised by registration and ownership, analysis engine, behaviour in a sandbox, external reputation.

01 Governance Risk

- The public registration record for this domain is incomplete.

Registration and ownership rule:KF_WHOIS_INCOMPLETE

02 Sensitive Interaction Risk

- The analysis matched a pattern TrustSniffer treats as a direct threat to a visitor.
Analysis engine signal:direct_threat
- A large share of what the page loaded came from other domains.
Behaviour in a sandbox rule:BEHAV_EXTERNAL_RATIO_MODERATE
- An external threat feed lists this domain: either Google Safe Browsing marked it malicious, or a significant number of malware engines flagged it.
External reputation rule:EXT_BLACKLIST_CRITICAL

Identity verification

Status UNVERIFIED

Identity score 30/100

Identity verification confidence 50%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of invmove.com.

- The request stayed on invmove.com. It was not redirected to another domain. [CLEAR](#)
- Registration is published under Web Commerce Communications Limited dba WebNic.cc. [CLEAR](#)
- DNS for this domain is served by cloudflare.com, across 2 name servers. [NOTED](#)
- The registration is paid up to 2027-05-18. [NOTED](#)
- It is hosted on FEMOIT, from a server in SC. [NOTED](#)

About this assessment

A trust score summarises the evidence TrustSniffer could collect about invmove.com at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
