Key findings

- Automated classification: Not Scam.
- Domain age: more than 10 years (registration continuity).
- Public web-archive history exists since 1998.
- No flags from the reputation services TrustSniffer consulted at assessment time.

Full analysis

Overview

iob.com.br is the corporate website of IOB, presenting accounting and enterprise-management software, tax and compliance tools, consulting, educational courses, regulatory content, customer support, and subscription-based services for accounting professionals and companies.

Scam/Impersonation Risk

No contradictions were observed. The site's content is consistent with a professional B2B software and consulting business: it describes online invoicing, tax simulation, accounting information, financial-management tools, courses, customer areas, and support channels without presenting phishing, cryptocurrency, investment, or other abuse-oriented features. Independent reputation checks were clean, with no malicious or suspicious detections, no blacklist finding, no brand-impersonation signal, and no broker-dataset match. The real-world operator identity remains independently unverified, so the legitimacy assessment is evidence-consistent rather than proof of legal identity.

EVIDENCE

- The homepage presents IOB Online, accounting and enterprise software, tax-reform resources, customer areas, sales support, and educational services.
- The homepage contains no sensitive login form, hidden form, password-external form, wallet connection, or detected phishing indicator.
- Domain registration: 1998-05-18; age 28.26 years; expiration 2027-05-18.
- Web-archive history: 905 snapshots spanning 1998–2026, with 29 years tracked.

Regulatory Verification Notes

The apparent business model is SaaS, consulting, education, and content provision for accounting and tax professionals rather than a financial product or regulated investment service. No licensing claim, license number, or regulatory authority is presented in the supplied site analysis; this is a disclosure point to clarify if a specific service requires authorization, not evidence of impersonation or fraud. The site's corporate presentation, established domain history, professional product descriptions, and clean external reputation support an apparently legitimate commercial operation, while the available evidence does not independently verify the operating legal entity. Transport security is present, but domain-validation TLS confirms encrypted communication rather than corporate identity.

EVIDENCE

- The homepage identifies products including online invoicing, tax simulation, legislative information, financial management, and professional education.
- Hosting telemetry: served from AS14618, Amazon.com, Inc. / AMAZON-AES, United States.
- TLS telemetry: Go Daddy Secure Certificate Authority - G2, DV validation, valid to 2026-09-05T11:20:45+00:00.
- The supplied legal and identity evidence does not record a license authority or license number.

What to Verify Next

Before credential or payment interactions, an organization should independently confirm the contracting entity and the applicable terms of service, refund or cancellation conditions, and payment-protection arrangements. Where a particular offering could fall within a regulated activity, the relevant national or sector registry should be checked for the named provider and service. Official support and sales channels should also be confirmed through an independently obtained corporate contact route rather than relying solely on information presented during a transaction.

EVIDENCE

- The homepage provides sales support, customer areas, a contact channel, and a telephone sales number.
- The site offers subscription software, consulting, educational courses, and content services, creating distinct contractual and payment terms that should be matched to the selected offering.
- The technical assessment recorded two successful behavioral runs, no cloaking, no wallet activity, and no hidden sensitive forms.

Summary Verdict

Available evidence is consistent with an established, apparently legitimate website and supports a high-trust, low-risk posture for ordinary interaction. The site's commercial purpose and observed technical and reputational signals align without observed scam, phishing, impersonation, or identity-conflict indicators; however, the operator's real-world identity is not independently verified.

Infrastructure Integrity

The website uses AWS and Cloudflare CDN/WAF infrastructure, with observed edge servers associated with AS14618 and AS13335 and additional origin candidates. This layered delivery architecture is a mitigating security and availability signal, although protective infrastructure alone does not establish legitimacy or operator identity.

Closing Assessment

Normal browsing and standard service evaluation are proportionate, while credential or payment use should follow the ordinary independent merchant-identity, contractual-terms, and payment-protection checks described above.

Written analysis generated 2026-08-13 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	50%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of iob.com.br.

- The request stayed on iob.com.br. It was not redirected to another domain. CLEAR
- DNS for this domain is served by awsdns-35.org, across 4 name servers. NOTED
- The registration is paid up to 2027-05-18. NOTED
- The earliest public archive of this site is from 1998-12-12. CLEAR
- It is hosted on AMAZON-AES, from a server in US. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about iob.com.br at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
