

Is ipage.se legit? TrustSniffer's high-trust assessment: 100/100

ipage.se

Verdict

100

OUT OF 100

HIGH TRUST

ipage.se appears legitimate.

Our checks found nothing pointing to fraud. Ordinary care still applies when you pay or sign in.

Not Scam

Safe for Login

Low Risk

Assessed 2026-08-21 by automated analysis. Classification confidence 50%.

What this site appears to be

Swedish web agency site describing services (WordPress websites, webshops, digital courses, SEO, speed optimization and support), customer references, case studies and multiple contact/quote forms; includes phone, email and company registration number.

Evidence status and limitations

Evidence completeness: UNKNOWN

- The real-world operator identity was not independently verified.
- Module-level completeness metadata is unavailable for this legacy report.

Key findings

- Automated classification: Not Scam.
- Domain age: more than 10 years (registration continuity).
- Public web-archive history exists since 2006.
- No flags from the reputation services TrustSniffer consulted at assessment time.

Full analysis

Overview

The website is a Swedish commercial web agency presented under the iPage name, offering WordPress websites, webshops, digital education platforms, search-engine optimisation, speed optimisation, support, and related digital communication services to small and medium-sized businesses.

Scam/Impersonation Risk

No contradictions were observed across the available website, technical, and reputation evidence. The site presents a coherent service-agency business model, with customer references, case studies, contact details, and quote-request functionality rather than financial, cryptocurrency, or credential-harvesting mechanics. Two suspicious inline scripts were observed during behavioral testing, but the same testing recorded no external network activity, hidden forms, password-exfiltration forms, wallet activity, cloaking, or clipboard manipulation; this keeps the observation in the category of a limited technical anomaly rather than an impersonation or phishing indicator. The operator's real-world identity remains independently unverified, so the site should be described as apparently legitimate rather than identity-proven.

EVIDENCE

- The homepage describes iPage as a Stockholm web agency serving small and medium-sized companies, with customer references and case studies.
- Behavioral testing completed two successful runs and recorded zero external XHR or POST activity, no hidden forms, and no login form; two suspicious inline scripts were nevertheless observed.
- Registration continuity records the domain as registered in 2004 and approximately 22.54 years old.
- Historical coverage records 21 years, from 2006-04-25 to 2026-04-13, with no detected repurposing or semantic category change.

Regulatory Verification Notes

The website's legal and contact presentation is reasonably substantive for a commercial web agency: the available page content includes a telephone number, an email address, and a company registration number. No financial-services licence or regulated-service claim is presented, and the supplied evidence does not independently verify the legal entity behind the site. That is a verification matter rather than evidence of misconduct. Available external checks returned no malicious or suspicious detections and no abuse reports, while the contextual broker-reputation check produced no match. The site therefore reads as an established, apparently legitimate business, with ordinary merchant-identity and contractual checks still appropriate before payment or credential interaction.

EVIDENCE

- The contact and business-information content displays a phone number, email address, and company registration number.
- The site is hosted on AS39570, LOOPIA - Loopia AB, SE.
- Transport encryption uses a DV TLS certificate issued by YR2, valid to 2026-10-10T09:44:47+00:00.
- Evaluated external checks recorded 0 malicious detections, 0 suspicious detections, and 0 abuse reports.

What to Verify Next

Before a commercial engagement, the proposed contracting entity and registration number should be matched independently against the relevant Swedish corporate registry. The written quotation should identify the contracting party, scope of work, ownership of delivered materials, support obligations, cancellation or refund terms, and applicable payment arrangements. Before submitting credentials or payment details, official contact channels should be confirmed through an independent route and payment methods with appropriate buyer protection should be used.

EVIDENCE

- The homepage provides quote-request functionality for prospective business customers.
- The site identifies its service category as a corporate web-agency operation rather than a regulated financial or investment service.
- No login form or sensitive credential-collection form was detected during page and behavior analysis.

Summary Verdict

The overall posture is high trust and low risk, and the available evidence is consistent with an established, apparently legitimate website. No scam, phishing, impersonation, or conflicting-identity indicators were observed, although independent linkage to a real-world operator remains incomplete.

Infrastructure Integrity

The site has no detected CDN or WAF layer, and two resolved addresses are assessed as likely origin addresses. This represents a conventional direct-hosting posture rather than an edge-protected deployment; it is a neutral infrastructure characteristic and does not undermine the site's positive content and reputation signals.

EVIDENCE

- Infrastructure resolution identified 2 unique IP addresses, with 0 edge IP addresses and 2 likely origin IP addresses.
- The recorded server IP is 93.188.2.51, located in Sweden.

Closing Assessment

Normal browsing and ordinary business engagement are proportionate to the current assessment, subject to the routine independent identity, contractual, and payment-protection checks appropriate for any unknown commercial supplier.

Written analysis generated 2026-08-21 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	50%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of ipage.se.

- The request stayed on ipage.se. It was not redirected to another domain. CLEAR
- Registration is published under Loopia AB. CLEAR
- DNS for this domain is served by loopia.se, across 2 name servers. NOTED
- The registration is paid up to 2027-02-10. NOTED
- The earliest public archive of this site is from 2006-04-25. CLEAR
- It is hosted on LOOPIA, from a server in SE. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about ipage.se at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
