

Is iptvportal.ru legit? TrustSniffer's high-trust assessment: 90/100

iptvportal.ru

Verdict

90

OUT OF 100

HIGH TRUST

iptvportal.ru appears legitimate.

Our checks found nothing pointing to fraud. Ordinary care still applies when you pay or sign in.

Not Scam

Low Risk

Assessed 2026-08-13 by automated analysis. Classification confidence 75%.

What this site appears to be

Marketing site for IPTVPORTAL, an IPTV/OTT platform offering middleware, DRM/CAS, DVR and streaming servers aimed at ISPs, cable operators, hotels and content providers. Page highlights free trial, features, case use and contact email for business inquiries.

Evidence status and limitations

- Evidence completeness: UNKNOWN
- The real-world operator identity was not independently verified.
 - Module-level completeness metadata is unavailable for this legacy report.

- Automated classification: Not Scam.
- Domain age: more than 10 years (registration continuity).
- Public web-archive history exists since 2011.
- No flags from the reputation services TrustSniffer consulted at assessment time.

Full analysis

Overview

The website is IPTVPORTAL, a business-to-business IPTV and OTT platform presenting middleware, DRM/CAS, DVR, streaming-server, and operator-support capabilities for internet service providers, cable operators, hotels, and content providers. Its apparent business model is to provide licensed platform services, support, and free trials to prospective commercial customers.

Scam/Impersonation Risk

No contradictions were observed: the supplied evidence contains no phishing, impersonation, or malicious-content indicators, and external reputation checks returned no confirmed malicious or suspicious findings. The homepage presents a coherent B2B software proposition rather than a deceptive investment, gambling, or credential-harvesting model; it describes IPTV/OTT infrastructure, middleware, DRM/CAS, DVR, streaming servers, use cases, partnerships, support, and a free-trial pathway. The site also showed no login form, sensitive form, wallet interaction, cloaking, clipboard activity, or suspicious script behavior during testing. These signals support an apparently legitimate, low-risk website, although they do not independently prove the identity of the operating entity.

EVIDENCE

- Homepage: describes IPTV/OTT middleware, DRM/CAS, DVR, and streaming-server services for operators, hotels, and content providers; no page-level red flags were identified.
- Homepage and observed behavior: no login form, hidden form, sensitive form, wallet connection, wallet-drainer activity, or cloaking was detected.
- External reputation telemetry: malicious detections 0 and suspicious detections 0; global traffic rank 21187, within the top 1 million.
- Registration and archive history: registered 2010-12-02 through RU-CENTER-RU and approximately 15.7 years old; 333 archive snapshots spanning 2011–2026, covering 16 years with a maximum observed gap of 1 year.

Regulatory Verification Notes

The available material supports the site's apparent commercial identity as IPTVPORTAL, but the real-world operator is not independently verified. No license, registration number, or regulated-status claim is established in the supplied website evidence; for a B2B IPTV platform, this is a verification and disclosure gap rather than evidence of impersonation or fraud. Any assessment of content-distribution rights, telecommunications

permissions, or sector-specific obligations should therefore be made against the contracting entity and the relevant jurisdiction. The site's professional product presentation, sustained historical presence, clean reputation, and established technical operation are consistent with an established website, while remaining separate from proof of legal identity or licensing.

EVIDENCE

- Homepage: presents a professional B2B SaaS/software profile and identifies the IPTVPORTAL service proposition, but the supplied evidence does not establish an independently verified legal operator.
- Hosting and transport telemetry: served from AS198068, PAGM-AS - P.A.G.M. OU, EE; TLS certificate issued by YE2 at DV validation level and valid to 2026-10-28.
- Archive provenance: first observed 2011-04-10 and last observed 2026-06-11, with historical continuity score 1.
- Page-authority telemetry: authority score 4, classified in the mid band.

What to Verify Next

Before a commercial engagement, independently confirm the contracting legal entity and any applicable licensing, content-rights, or telecommunications requirements with the relevant registry or counterparty documentation. Obtain written terms covering service scope, support, termination, data processing, and any trial-to-paid conversion, and confirm official contact channels through an independent route. Credential or payment interactions should additionally use ordinary merchant-identity, return or cancellation, and payment-protection checks.

EVIDENCE

- The available material is primarily product-marketing content, making independent confirmation of the contracting party appropriate before commitment.
- The stated business model involves commercial platform services and support, so written contractual terms should be obtained before procurement or payment.
- The homepage includes a trial and business-inquiry pathway, providing a specific basis for confirming conversion, billing, and cancellation terms.

Summary Verdict

Overall posture is **high trust and low risk**, with the available evidence consistent with an established, apparently legitimate website. The assessment supports ordinary browsing and normal service interaction, but does not prove the real-world identity of the operator.

Infrastructure Integrity

The site resolves directly to hosting operated by PAGM-AS - P.A.G.M. OU in Estonia under AS198068, with one identified IP and no detected CDN or WAF layer. The valid domain-validated TLS certificate provides transport protection; the hosting arrangement is a mitigating technical signal but is not, by itself, proof of legitimacy.

Closing Assessment

Proceed with ordinary business diligence before credentials or payment, including independent confirmation of merchant identity, contractual terms, and available payment protection.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	50%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of iptvportal.ru.

- The request stayed on iptvportal.ru. It was not redirected to another domain. CLEAR
- Registration is published under RU-CENTER-RU. CLEAR
- DNS for this domain is served by ru., across 4 name servers. NOTED
- The registration is paid up to 2026-12-02. NOTED
- The earliest public archive of this site is from 2011-04-10. CLEAR
- It is hosted on PAGM-AS, from a server in EE. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about iptvportal.ru at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
