

Is is-telecom.ru legit? TrustSniffer's high-trust assessment: 90/100

is-telecom.ru

Verdict

90

OUT OF 100

HIGH TRUST

is-telecom.ru appears legitimate.

Our checks found nothing pointing to fraud. Ordinary care still applies when you pay or sign in.

Not Scam

Low Risk

Assessed 2026-08-03 by automated analysis. Classification confidence 70%.

What this site appears to be

Russian-language website for the established local provider И.С.-Телеком, offering residential internet and IP television across Chelyabinsk Oblast. It lists concrete monthly tariffs, discounts, payment options, technical support, service FAQs, company disclosures, privacy terms, and an application form for new connections.

Key findings

- Automated classification: Not Scam.
- Domain age: more than 10 years (registration continuity).
- Public web-archive history exists since 2015.
- No flags from the reputation services TrustSniffer consulted at assessment time.

Full analysis

Overview

The website is the customer-facing portal of ООО «ИС ТЕЛЕКОМ», a local telecommunications provider offering residential internet and IP television subscriptions across Chelyabinsk Oblast, with published tariffs, equipment options, prepaid-term discounts, payment facilities, customer support, and an online connection-request process.

Scam/Impersonation Risk

No identity contradictions, brand impersonation, phishing behavior, or deceptive financial claims were observed. The long-established domain and sustained archival record support continuity rather than recent opportunistic creation or repurposing. Independent threat-reputation checks were clean, with no malicious or suspicious detections, abuse reports, or matched threat signatures; the site also holds an established global traffic position. These signals converge strongly with the coherent telecommunications business presented on the homepage.

- The domain record shows registration through RU-CENTER-RU on 29 October 2012 (~13.77 years old), with expiry on 29 October 2026.
- The web archive contains 65 snapshots spanning 2 February 2015–5 June 2026 (12 years tracked), with no detected semantic repurposing.
- External reputation telemetry recorded 0 malicious detections, 0 suspicious detections, 0 abuse reports, and 0 matched threat signatures for the site.
- The homepage presents a consistent local-provider identity and ordinary consumer telecommunications offering; no phishing forms, hidden forms, or brand-impersonation indicators were detected.

Regulatory Verification Notes

The homepage identifies the operating business as ООО «ИС ТЕЛЕКОМ» and provides legal policies, privacy terms, personal-data consent, service information, and customer-support channels. The reviewed content does not present a telecommunications licence number or issuing authority; this is a minor disclosure-verification point rather than evidence of illegitimacy. No conflicting legal-entity name or adverse broker-profile match was identified. The connection form has a stated service-application and personal-data-consent purpose, and no untrusted submission destination was found.

- The homepage and associated legal materials identify ООО «ИС ТЕЛЕКОМ» and describe privacy and personal-data processing terms.
- The service-application form requests information for a new connection and includes personal-data consent; its destination was not classified as untrusted.

- The site’s hosting infrastructure is served from AS29196 (LLC “INZHENERNYE SETI – TELEKOM”, Russia).
- The site’s transport encryption uses a GlobalSign GCC R3 DV TLS CA 2020 certificate (DV), valid to 1 October 2026.

What to Verify Next

For formal procurement or regulated onboarding, the contracting entity’s details should be reconciled with the service agreement and the applicable official company and telecommunications registers. Service availability, installation conditions, equipment charges, renewal pricing, and prepaid-discount terms should be confirmed for the intended address. Official customer-service and payment channels should be independently confirmed before establishing recurring payments.

- The homepage offers address-dependent service selection for locations within Chelyabinsk Oblast.
- Published tariff mechanics include monthly subscriptions and discounts for prepaid terms of one, three, six, or twelve months.
- The payment information identifies the “City” payment system, payment at the provider’s office, and payment by bank card.
- The homepage advertises round-the-clock technical support and provides customer-account navigation.

Summary Verdict

The website is a legitimate, established, and trustworthy online presence for a regional telecommunications provider. Its coherent corporate identity, mature operating footprint, clean external reputation, and stable historical provenance support normal customer engagement with high confidence. No contradictory risk signals were found.

Infrastructure Integrity

The site resolves directly to two likely origin addresses and does not use a detected CDN or WAF layer. Direct origin visibility is consistent with the provider-operated network context; it is neither an indication of impersonation nor independent proof of legitimacy. The identified infrastructure and valid encrypted transport provide a sound technical basis for ordinary service delivery.

Closing Assessment

Normal interaction—including account login, submitting a connection application, and standard customer transactions—is appropriate, subject to routine review of contractual terms and payment details.

Written analysis generated 2026-08-03 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	50%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

About this assessment

A trust score summarises the evidence TrustSniffer could collect about is-telecom.ru at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
