The page as captured

https://www.isbank.com.tr/

What isbank.com.tr served when TrustSniffer captured it on 2026-08-17. The page may look different now.

Key findings

- Automated classification: Not Scam.
- Domain age: more than 10 years (registration continuity).
- Public web-archive history exists since 1998.
- No flags from the reputation services TrustSniffer consulted at assessment time.

Full analysis

Overview

This website is the corporate banking portal of Türkiye İş Bankası, presenting retail and commercial banking services, digital banking access, financial-product information, calculators, application pathways, and corporate resources. Its apparent business model is conventional banking, generating revenue through interest, fees, and the provision of financial products and services.

Scam/Impersonation Risk

No phishing, impersonation, malicious-content, or blacklist contradictions were observed. The site's extensive historical continuity, consistent banking presentation, and clean results across the evaluated external reputation checks support an apparently legitimate and established web presence. The real-world operator identity remains independently unverified, so the on-site institutional presentation should be treated as evidence-consistent rather than conclusive proof of identity.

EVIDENCE

- Domain registration records show registration in 1997, with an age of approximately 29.19 years.
- Historical web records contain 3,303 snapshots spanning 1998–2026, with 29 years tracked.
- The homepage is classified as a corporate banking page, with no detected brand-impersonation or phishing indicators.
- External reputation checks recorded zero malicious and zero suspicious detections, with no blacklist or Google Safe Browsing hit.

Regulatory Verification Notes

The homepage presents Türkiye İş Bankası branding and a substantive banking scope covering deposits, loans, cards, payments, investments, digital banking, insurance, pensions, and commercial banking services. This coherent content supports the assessment that the site is apparently legitimate, but the available page evidence does not identify a licensing authority or license number; that is a regulatory-disclosure gap rather than evidence of a scam. A domain-exact third-party broker record reports no regulation or license and carries limited negative exposure context; it is a soft reputational signal and not a legal, licensing, or regulatory determination.

EVIDENCE

- The homepage title identifies “Benim Bankam | Türkiye İş Bankası” and provides retail, commercial, digital-banking, insurance, investment, and corporate-resource sections.
- The site's transport encryption uses a GlobalSign RSA OV SSL CA 2018 certificate with organization subject “TÜRKİYE İŞ BANKASI A.Ş.”, valid through 2026-10-20.
- Hosting telemetry identifies AS8075 with provider attribution “isbank 144”.
- The domain-exact third-party record reports “No Regulation” and no license found, while recording only limited exposure context.

What to Verify Next

Before credential or payment interactions, an independent source should be used to confirm the institution's official identity and applicable banking authorization with the relevant registry or supervisory authority. Contact channels should be reached through an independently sourced route, and transaction-specific payment protections and applicable customer terms should be reviewed before material account activity.

EVIDENCE

- The homepage contains a login form, contact form, and application or lead form, making independent confirmation of the official access route appropriate.
- The site provides customer-support and corporate-information sections that can be compared with independently sourced institutional details.

Summary Verdict

The overall posture is **high trust and low risk**, with available evidence consistent with an established, apparently legitimate banking website. The assessment supports normal website use while retaining uncertainty regarding independent confirmation of the real-world operator identity.

Infrastructure Integrity

The available technical evidence confirms a valid organization-validated TLS deployment and identifies a stable hosting attribution. Protective infrastructure should be regarded as a mitigating control for transport and network exposure, not as proof of the operator's identity.

EVIDENCE

- The server endpoint is 213.161.144.97.
- The TLS certificate validation level is OV, issued by GlobalSign RSA OV SSL CA 2018, and expires on 2026-10-20.
- Hosting telemetry identifies AS8075 and “isbank 144” as the associated provider.

Closing Assessment

Ordinary interaction is proportionate to the assessment, but independent institutional and transaction-protection checks should be completed before credentials or payment details are submitted.

Written analysis generated 2026-08-17 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	50%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of isbank.com.tr.

- The request stayed on isbank.com.tr. It was not redirected to another domain. CLEAR
- DNS for this domain is served by 74.70. NOTED
- The registration is paid up to 2027-06-16. NOTED
- The earliest public archive of this site is from 1998-01-19. CLEAR

About this assessment

A trust score summarises the evidence TrustSniffer could collect about isbank.com.tr at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
